SEC. 4. In the obligations of any county, town, city, borough, school district, fire district, or sewer district in this State.

SEC. 5. In the stock or bonds of any incorporated city situated in one of the States of the United States which was admitted to statehood prior to January 1, 1896, and which was incorporated as a city, under the same or a different name, at least 25 years prior to making such investment, and which has not less than 20,000 inhabitants, as ascertained by the United States or State census, or any municipal census taken by authority of the State, next preceding such investment, provided the amount of the bonds of such city, including the issue in which such investment is made, and its proportion, based on the valuations of property therein for the assessment for taxation next preceding such investment, of the county and town debt, after deducting the amount of its water debt and the amount of the sinking funds which are available for payment of its bonds other than water bonds, does not exceed 7 per cent of the valuation of the taxable property in such city, to be ascertained by the valuation of property therein for the assessment of taxes, next preceding such investment, and provided the city issuing such bonds, or the State in which it is located, has not defaulted for more than 90 days in the payment of any of its funded indebtedness or interest thereon, within 15 years next preceding the purchase of such bonds by the savings bank. The provisions of this section shall not authorize the investment of funds in any "special assessment" or "improvement" bonds, or other bonds or obligations which are not the direct obligations of the city issuing the same, and for which the faith and credit of the issuing city are not pledged. A city or State shall be considered to be in default within the meaning of this act while any unpaid and overdue obligation, either principal or interest, shall be outstanding.

SEC. 6. In the bonds or interest-bearing obligations issued by a railroad corporation organized under the laws of any of the New England States, and owning in fee not less than 300 miles of railroad located in said States, and which has paid in dividends in cash an amount equal to not less than 4 per cent per annum on its outstanding shares of capital stock in each fiscal year for the five years next preceding such investment, or in the bonds or interest-bearing obligations issued by a railroad, terminal, depot, bridge, tunnel, or street railway corporation, organized under the laws of any of the New England States or the State of New York assumed by a railroad corporation organized under the laws of any of the New England States and owning in fee not less than 300 miles of railroad located in said States and complying with all the provisions of this section; if any such railroad corporation shall be leased to another railroad corporation organized under the laws of any of the New England States and owning in fee not less than 300 miles of railroad located in said States, under a lease which provides for the payment by the lessee as rental of an amount sufficient to pay dividends on the capital stock of the lessor amounting in the aggregate in each fiscal year of said lessor corporation during the term of said lease to not less than 4 per cent on its outstanding shares of capital stock, such lessor shall be regarded as having paid its dividends within the meaning of this section, but in case the lessee shall hold any shares of the capital stock of the lessor such shares shall not be considered as outstanding within the meaning of this section.

SEC. 7. In the bonds or debentures actually issued by a railroad corporation incorporated in any of the New England States at least one-half of the railroad of which is located in said State, whether such corporation is in possession of and is operating its own railroad or such railroad is leased to another railroad corporation incorporated in any one of the New England States, provided such bonds or debentures shall be secured either by a mortgage which was at the date thereof, or is at the time of making the investment, a first mortgage on not less than 75 per cent of the railroad of such corporation owned in fee at the date of the mortgage, or by a refunding mortgage which provides for the retirement of all prior lien mortgage bonds of such railroad corporation, or by a mortgage which is a prior lien on some part of the railroad covered by a refunding mortgage which provides for the retirement of all outstanding prior lien bonds, or that if the railroad and railroad property of such corporation are unincumbered by mortgage such bonds or debentures shall be issued under the authority of one of said States which provides by law that no such railroad corporation which has issued bonds or debentures shall subsequently execute a mortgage upon its road, equipment, franchise, or upon any of its real or personal property, without including in and securing by such mortgage all bonds or debentures previously issued and all preexisting debts and liabilities, and provided such corporation has paid in dividends in cash an amount equal to not less than 4 per cent per annum on all its outstanding capital stock in each fiscal year for the five years next preceding such investments. If any such railroad company shall hold the railroad of another such railroad corporation under a lease which provides for the payment by the lessee as rental of an amount sufficient to pay dividends on the capital stock of the lessor amounting in the aggregate in each fiscal year of said lessor during the term of said lease to not less than 4 per cent on all its outstanding capital stock such lessor shall be regarded as having paid its dividends within the meaning of this section, but in case the lessee shall hold any shares of the capital stock of the lessor, such shares shall not be considered as outstanding within the meaning of this section.

SEC. 8. No bonds or other interest-bearing obligations shall be made a legal investment by sections 6 and 7 in case the authorized issue thereof, with all outstanding prior debts of the issuing or assuming corporation, including all evidences of debt that may legally be issued under any of its prior authorizations or under any of its assumed prior authorizations, after deducting therefrom, in case of a refunding mortgage, the bonds reserved under the provisions of said mortgage to retire prior debts at maturity, shall exceed three times the outstanding capital stock of said corporation at the date of such investment.

SEC. 9. In the bonds issued by a railroad, terminal, depot, bridge, tunnel, or street railway corporation organized under the laws of any of the New England States or the State of New York, the property of which is located wholly or in part in one of said States, or in the bonds issued by a railroad, terminal, depot, bridge, tunnel, or street railway corporation, organized under the laws of any of said States, assumed by a railroad, terminal, depot, bridge, tunnel, or street railway corporation organized under the laws of said States, provided such bonds shall be secured either by a mortgage which was at the date thereof, or is at the time of making the investment, a first mortgage on not less than 75 per cent of the railroad owned in fee at the date of the mortgage, in the case of a railroad or street railway corporation, or the fixed property, in the case of a terminal, depot, bridge, or tunnel corporation, owned by the corporation issuing the bonds, or by a refunding mortgage which provides for the retirement of all prior lien bonds of such corporation, or by a mortgage which is a prior lien on some part of the property covered by a refunding mortgage which provides for the retirement of all outstanding prior lien bonds. No bond shall be made a legal investment under this section unless the bonds are guaranteed principal and interest by indorsement by, or guaranteed

principal and interest by indorsement which guaranty has been assumed by a railroad corporation, owning in fee not less than 300 miles of railroad in the New England States, whose bonds are made a legal investment under section 6. No bonds shall be made a legal investment by this section in case the mortgage securing the bonds shall authorize a total issue of bonds which added to the total debt, described in section 8, of the guaranteeing corporation, including therein the authorized amount of all previously guaranteed bond issues, shall exceed three times the outstanding capital stock of said guaranteeing corporation at the time of making said investment.

SEC. 10. In the mortgage bonds, as described in section 15, issued or assumed by any railroad corporation incorporated under the laws of the United States, or any State, provided such railroad corporation owned in fee during each of the five fiscal years of such railroad corporation next preceding the date of such investment not less than 500 miles of standard-gauge railroad, exclusive of sidings, within the United States, and provided such railroad corporation has complied during each of said fiscal years with the provisions of section 14, or if such corporation owned in fee less than 500 miles of such railroad, the gross earnings of such corporation, as reckoned in section 14, shall have been not less than $10,000,000.

SEC. 11. In the mortgage bonds, as described in section 15, issued or assumed by any railroad corporation incorporated under the laws of the United States, or any State thereof, provided during each of the five fiscal years of such railroad corporation next preceding the date of such investment its railroad subjected to the lien of the mortgage securing its bonds has been operated by a corporation described in and which has complied with all the provisions of sections 10 and 14. No bonds shall be made a legal investment by this section unless the bonds are guaranteed, principal and interest, by indorsement by, or guaranteed, principal and interest, by indorsement which guaranty has been assumed by, the corporation operating the railroad covered by the mortgage securing the bonds and which has complied with all the provisions of sections 10 and 14.

SEC. 12. In the mortgage bonds, as described in this act, issued or assumed by any terminal, depot, bridge, or tunnel company incorporated under the laws of the United States, or any State, provided the property of such terminal, depot, bridge, or tunnel company is used by one or more railroad corporations described in and which have complied with all the provisions of sections 10 and 14. No bond shall be made a legal investment by this section unless the bond is guaranteed, principal and interest, by indorsement by, or guaranteed, principal and interest, by indorsement which guaranty has been assumed by, one or more railroad corporations described in and which has complied with all the provisions of sections 10 and 14.

SEC. 13. In the mortgage bonds, as described in section 15, issued or assumed by any railroad corporation incorporated under the laws of the United States, or any State, provided during each of the five fiscal years of such railroad corporation next preceding the date of such investment such railroad corporation owned in fee not less than 100 miles of standard-gauge railroad, exclusive of sidings, within the United States, and provided such railroad corporation has complied during each of said fiscal years with the provisions of section 14. No bonds shall be made a legal investment by this section unless the bonds are guaranteed, principal and interest, by indorsement which guaranty has been assumed by, a corporation described in and which has complied with all the provisions of sections 10 and 14, nor unless it complies with the provisions of section 16.

SEC. 14. Any railroad corporation described in sections 10 and 13 shall comply with the provisions of this section during each of the five fiscal years of such railroad corporation next preceding the date of such investment, before any of its mortgage bonds, as described in section 15 shall be made a legal investment. Such railroad corporation shall have paid the matured principal and interest of all indebtedness and shall have paid in dividends in cash to its stockholders an amount equal to at least 4 per cent upon all its outstanding capital stock; the gross earnings from the operation of the property of such railroad corporation, including therein the gross earnings of all railroads leased and operated or controlled and operated by said corporation, and the gross earnings from the sale of coal from mines owned or controlled by it, shall not have been less in amount than five times the amount necessary to pay the interest payable upon its entire outstanding indebtedness, the rentals of all leased lines, and the interest on all outstanding indebtedness of railroads controlled and operated which are not owned by said corporation, after deducting from said interest and rentals interest and dividends received from the stocks, bonds, or notes of railroad corporations not operated by said corporation, which have been deposited with a trustee as the only security for the payment of bonds or notes issued by said corporation, but not in excess of the interest on said last-named bonds or notes.

SEC. 15. Whenever the term "mortgage bonds" is used in sections 10 to 20, inclusive, it shall mean either (1) that the mortgage securing the bonds was at the date thereof or is at the date of such investment a first mortgage on not less than 75 per cent of the railroad in the case of a railroad corporation or the fixed property in the case of a terminal, depot, bridge, or tunnel company owned in fee at the date of the mortgage by the corporation which executed the mortgage and issued the bonds; that 75 per cent of the railroad subject to the lien of said mortgage is connected; that the date of said mortgage is at least five years prior to the date of such investment; unless the corporation issuing, assuming, or guaranteeing the bond has complied with section 14 for each of the 10 fiscal years of such corporation next preceding the date of such investment; but a mortgage given in substitution for and which has complied with all the provisions of sections 10 and 14; (2) that if the mortgage securing the bonds was at the date thereof or is at the date of such investment not a first mortgage on not less than 75 per cent of the railroad owned in fee at the date of the mortgage, it is a first mortgage on at least 75 per cent of the railroad subject to the lien of said mortgage at the date thereof; but if any stocks or bonds are deposited with the trustee of said mortgage as part security therefor, representing or covering railroad mileage not owned in fee, the bonds secured by said mortgage shall not become legal investments unless said corporation owns in fee at least 75 per cent of the total mileage which is subject to the lien of such mortgage, including the mileage which is represented or covered by said stocks or bonds; that 75 per cent of the railroad subject to the lien of said mortgage is connected; that the date of said mortgage is at least five years prior to the date of such investment; unless the corporation issuing, assuming, or guaranteeing the bond has complied with section 14 for each of the 10 fiscal years of such corporation next preceding the date of such investment; but a mortgage given in substitution for and not greater in amount than such mortgage covering the same railroad or property shall be considered to be in accordance with this requirement; (3) that the mortgage securing the bonds was at the date thereof or is at the date of such investment a first mortgage, or a mortgage or trust indenture which is in effect a first mortgage upon all the railroad, subject to the lien of said mortgage or trust indenture by virtue of the irrevocable pledge with the trustee thereof of an entire issue or issues of bonds which are a first lien, upon the railroad of a railroad corporation which is owned and operated, controlled, and operated, or leased and operated, by the corporation issuing or assuming said bonds; that 75 per cent of the railroad subject to the lien of said mortgage is connected; that the date of said mortgage is at least five years prior to the date of such investment, unless the corporation issuing, assuming, or guaranteeing the bonds has complied with section 14 for each of the 10 fiscal years of such corporation next preceding the date of such investment; but a mortgage given in substitution for and not greater in amount than such mortgage and covering the same railroad property shall be considered to be in accordance with this requirement; (4) that the mortgage securing the bonds was at the date thereof or is at the date of such investment a refunding mortgage which provides for the retirement of all prior lien mortgage bonds of said corporation outstanding at the time of said investment and covering at least 75 per cent of the railroad owned in fee by said company at the date of said mortgage. No mortgage is to be regarded as a refunding mortgage under the provisions of this section unless the bonds which it secures mature at a later date than any bond which it is given to refund, or in case bonds are issued to mature at an earlier date than any bond which it is given to refund, the mortgage contains the provisions that bonds issued to mature at an earlier date may be retired by a like amount of bonds reissued under said mortgage; (5) that the mortgage securing the bonds is a prior lien to a refunding mortgage described above on some part of the railroad or railroad property covered by said refunding mortgage, provided the bonds issued under such mortgage are to be refunded by said refunding mortgage and the property covered by said prior lien mortgage is operated by, and its operations included in, those of the railroad corporation issuing said refunding mortgage.

SEC. 16. No bond shall be made a legal investment by section 10 in case the mortgage securing the same shall authorize a total issue of bonds which, with all outstanding prior debts of the issuing or assuming corporation, including all bonds not issued that may legally be issued under any of its prior debts, or of its assumed prior debts, after deducting therefrom in case of a refunding mortgage the bonds reserved under the provisions of said mortgage to retire prior debts at maturity, shall exceed three times the outstanding capital stock of said corporation at the date of such investment. No bond shall be made a legal investment by sections 11, 12, and 13 in case the mortgage securing the same shall authorize a total issue of bonds which, added to the total debt, as defined in this section, of the guaranteeing corporation, including therein the authorized amount of all previously guaranteed bond issues, shall exceed three times the capital stock of said guaranteeing corporation outstanding at the time of making said investment. In case of a mortgage executed prior to the passage of this act, under which the total amount of bonds which may be issued is not specifically stated, the amount of bonds outstanding thereunder at the date of such investment shall be considered as the total authorized issue.

SEC. 17. Bonds which have been or shall become legal investments under any of the provisions of sections 10 to 20, inclusive, shall not be rendered illegal, although the corporation issuing, assuming, or guaranteeing such bonds shall fail for a period not exceeding two successive fiscal years to comply with the requirements of sections 10 and 14, but no further investment in the bonds issued, assumed, or guaranteed by said corporation shall be made after the first fiscal year of such failure; but if after the expiration of said period said corporation complies for the following fiscal year with all the requirements of sections 10 and 14 it shall be regarded as having complied therewith during said period, and thereupon said bonds shall be legal investments, but in case of any subsequent failure to comply with said sections 10 and 14 the bonds of said corporation shall not be purchased until said corporation shall have complied each year for five successive years with said sections 10 and 14.

SEC. 18. Bonds which have been or shall become legal investments under any of the provisions of sections 10 to 20, inclusive, shall not be rendered illegal because the property upon which they are secured has been or shall be conveyed to or legally acquired by another railroad corporation and the corporation which issued or assumed said bonds has been or shall be consolidated with another railroad corporation, if the consolidated or purchasing corporation shall assume the payment of said bonds and so long as it shall continue to pay regularly interest or dividends, or both, upon the securities issued against, in exchange for, or to acquire the stock of the corporation consolidated, or the property purchased, or upon securities subsequently issued in exchange or substitution therefor, to an amount at least equal to 4 per cent per annum upon the capital stock outstanding at the time of such consolidation or purchase of said corporation which issued or assumed said bonds.

SEC. 19. If a railroad corporation which has complied with all the requirements of sections 10 and 14, except that the period of compliance is less than five years, shall be or shall have been consolidated or merged with, or its railroad purchased and all the debts of such corporation assumed by, another railroad corporation incorporated under the laws of the United States or any State, the corporation so succeeding shall be considered as having complied with all the provisions of said sections during those successive years next preceding the date of such consolidation, merger, or purchase in which said consolidated, merged, or purchased corporations, if considered as one continuous corporation in ownership and possession, would, taken together, have so complied, provided in the case of a railroad corporation which has complied with all the requirements of said sections, except that the period of compliance is less than five years, said succeeding corporation shall continue so to comply for a further period which shall make such compliance equivalent to at least five successive years.

SEC. 20. If, by means of consolidation, merger, or purchase, a railroad corporation shall own and possess the properties and franchises which prior thereto belonged to similar corporations, and during the years next preceding such consolidation, merger, or purchase one or more of said corporations have regularly paid in cash to stockholders dividends in amounts equaling or exceeding 4 per cent per annum upon the entire capital stock of the successor corporation outstanding at the time of the investment, such successor corporation shall be considered as having paid such dividends during the same period of years.

SEC. 21. Savings banks may invest not exceeding 2 per cent of their deposits and surplus in equipment trust notes, bonds, or certificates

issued by or which are guaranteed by indorsement both as to principal and interest by or which are secured by lease of equipment to a railroad corporation which, in case of a railroad corporation incorporated under the laws of any of the New England States, has complied with section 6, or which, in the case of a railroad corporation incorporated under the laws of any other State, or of the United States, has complied with all the provisions of sections 10 and 14, provided said notes, bonds, or certificates are secured by a first lien on or by a lease and conditional sale of new standard railroad equipment free from other encumbrances for the purchase of which said notes, bonds, or certificates were issued at not exceeding 90 per cent of the purchase price thereof, and provided the instrument under which such notes, bonds, or certificates are issued or the lease of such equipment to the railroad corporation provides for the proper maintenance of the equipment covered thereby and for the payment of the entire issue of such notes, bonds, or certificates in not exceeding 15 annual or 30 semiannual installments, without the release of any part of the lien or interest in any of the equipment securing such notes, bonds, or certificates until the entire issue of such series of notes, bonds, or certificates shall have been paid or redeemed. No equipment trust notes, bonds, or certificates shall be made a legal investment by this section in case the series authorizes an amount which, added to the total debt as defined in section 8 in the case of a railroad corporation organized under the laws of any of the New England States or section 16 in the case of a railroad corporation organized under the laws of any other State or of the United States, which issued or guaranteed or is the lessee of the equipment securing such equipment trust notes, bonds, or certificates, including therein the outstanding amounts of all previously issued series of such equipment trust notes, bonds, or certificates, shall exceed three times the capital stock of such railroad corporation outstanding at the time of making said investment.

SEC. 22. Savings banks may invest not exceeding 2 per cent of their deposits and surplus in bonds issued by any street railway corporation incorporated in this State the railway of which is located wholly or in part therein, provided such bonds are secured by a mortgage which was at the date of the mortgage or is at the date of the investment a first mortgage on not less than 75 per cent of the railway of such corporation owned in fee at the date of the mortgage, and provided the gross earnings of said corporation each fiscal year for the five years next preceding the date of such investment were not less than $100,000, and that said corporation in each of said years earned and paid in dividends in cash an amount equal to at least 4 per cent per annum upon the outstanding capital stock, and provided at the date of any such dividend the outstanding capital stock is equal to at least one-half of the debt of such corporation.

SEC. 23. Savings banks may invest not exceeding 2 per cent of their deposits and surplus in mortgage bonds and other interest-bearing obligations of any water company supplying water for domestic use to communities in this State having a population of not less than 50,000 whose franchise is an exclusive one and unlimited in time, provided the amount of all the outstanding debts of such company does not exceed its capital stock, and provided such water company has earned each year and paid in cash from its officially reported net earnings, as shown by its annual report or other sworn official statement, to municipal, State, or United States authorities, dividends of not less than 4 per cent per annum on its entire outstanding capital stock, for a period of four years next preceding the making of the investment.

SEC. 24. Savings banks may invest not exceeding 2 per cent of their deposits and surplus in bonds of any telephone company incorporated in this State, whose property is located chiefly in this State, which are secured by a first mortgage upon at least 75 per cent of the property of such company, including its franchises, rights, and privileges, and limiting the amount of bonds issuable thereunder to 75 per cent of the valuation of the property mortgaged, excluding any valuation of said franchises, rights, and privileges, and providing the gross income of such telephone company shall have been not less than $2,000,000 per annum during each of the five fiscal years of such telephone company next preceding the date of such investment.

SEC. 25. Savings banks may invest not exceeding 2 per cent of their deposits and surplus in bonds of any telephone company incorporated in any of the New England States, or in the State of New York, and secured by a first mortgage upon at least 75 per cent of the property of such telephone company, or by the deposit with a trust company incorporated under the laws of one of the New England States or of the State of New York of bonds and shares of stock of other telephone corporations under an indenture of trust which limits the amount of bonds so secured to 75 per cent of the value of the securities deposited as stated and determined in said indenture, and provided the gross income of such telephone company shall have been not less than $25,000,000 per annum during each of the five fiscal years of such telephone company next preceding the date of such investment. No bond of a telephone company shall be made a legal investment under sections 24 and 25 unless during each of the five fiscal years of such telephone company next preceding the date of such investment said telephone company shall have paid the matured principal and interest of all its indebtedness, and shall have paid, during each of said years, in cash dividends an amount equal to not less than 6 per cent per annum on all its outstanding issues of capital stock, and the dividends paid on the capital stock of such telephone company shall not have been less than the total amount necessary to pay the interest upon its entire outstanding indebtedness.

SEC. 26. Savings banks may invest in the capital stock of any bank or trust company located in this State; or in the city of New York, in the State of New York; or in the city of Boston, in the State of Massachusetts, but no savings bank shall hold by way of investment or security for loans more than 20 per cent of its deposits in the stocks of such banks or trust companies at par value, nor more than 3 per cent of its deposits, nor more than $100,000 of par value in, nor more than one-quarter of the capital stock of any such bank or trust company. The provisions of this section shall not render illegal any such investments now owned by any bank or trust company.

SEC. 27. Savings banks may invest in loans secured by first mortgage on unencumbered real estate not to exceed 50 per cent of the value of such real estate located in this State or in the counties of Providence or Washington, in the State of Rhode Island; or in the counties of Hampden or Berkshire, in the State of Massachusetts; or in the counties of Dutchess, Putnam, or Westchester, in the State of New York.

SEC. 28. When any loan is made by a savings bank upon real estate the security shall be appraised by two or more suitable persons well known in the community where such loan is made, one of whom shall be a trustee of the bank making the loan. Such appraisal shall express upon its face the amount at which such property is appraised and, with a certificate of title or a title insurance policy, shall be lodged and kept with the institution making such loan. No loan shall be made by any savings bank to any corporation or association or ecclesiastical society secured by mortgage upon its property unless the same shall be accompanied by the individual guaranty of some responsible party or parties or by other collateral security of value equal to the amount of the sum loaned. The directors or trustees of any bank consenting to any loan contrary to the provisions of this section shall be individually responsible for any loss by reason of such loan.

SEC. 29. Savings banks may invest not exceeding 20 per cent of their deposits and surplus in notes secured by pledge of stock or bonds as collateral, provided the corporation issuing such stock or bonds shall have paid thereon dividends or interest at the rate of not less than 4 per cent per annum during the two years next preceding the time when such loan is made; or by the pledge of any stock or bonds or other obligations which under the provisions of this act may be purchased by savings banks; but the market value of any securities given to secure any collateral loan shall be at least 20 per cent in excess of the amount of the loan and not more than 5 per cent of the aggregate deposit in any savings bank shall be loaned on the stock, bonds, or other obligations of one corporation, or by the pledge of deposit accounts and books in savings banks in this State to an amount not exceeding the balance due from said savings banks on such deposit account.

SEC. 30. Savings banks may invest not exceeding 10 per cent of their deposits and surplus in notes, each of which shall be the joint and several obligation of two or more parties, all residents of this State, but no savings bank shall loan on personal security to one person more than 3 per cent of its deposits at the time of making such loan. No savings bank shall buy, or lend any money upon, any obligations on which only one person or firm shall be holden without taking additional security for the same equivalent to the guaranty or indorsement of some other responsible party.

SEC. 31. No savings bank shall expend in the purchase or construction of any building, for the purpose, in whole or in part, of accommodating the business of such bank, a greater sum than may, in the opinion of the bank commissioners, properly be taken from the surplus of such bank, after allowing for depreciation of its assets, and such expenditures shall in all cases be subject to the approval of the bank commissioners.

SEC. 32. Savings banks may deposit in incorporated banks or trust companies located in this State or the States of New York, Massachusetts, or Rhode Island, or the city of Philadelphia, but such deposits shall not in any case exceed 30 per cent of the capital stock, surplus, and undivided profits of such depositary.

SEC. 33. No savings bank shall demand or receive on any loan, either as bonus, commission, or tax, or in any other way, directly or indirectly, more than 6 per cent per annum, but taking interest in advance, for a period not to exceed six months, and reimbursement of any money paid by a bank for insurance or taxes on property mortgaged to it shall not be a violation of this section.

SEC. 34. When any loan or investment is made by any savings bank the names of the directors or trustees consenting thereto shall be entered upon the records of such bank, and said records shall be open at all times to the inspection of the corporators and auditors of such bank and the bank commissioners and be prima facie evidence of the truth of the statements therein contained.

SEC. 35. All banks and trust companies maintaining a savings department, or soliciting or receiving deposits as savings, shall invest all such deposits so received according to the requirements of the general statutes concerning the investment of deposits in savings banks; and said investments shall be segregated and set apart and not mingled with other assets of such bank or trust companies, and shall be for the exclusive protection of the depositors in said savings department, and shall not be liable for or used to pay any other obligation or liability of said bank or trust company until after the payment of all of the depositors in said savings department.

SEC. 36. The provisions of this act shall not render illegal the investment in, nor the investment hereafter in, any bonds or interest-bearing obligations issued or assumed by a railroad corporation which were a legal investment at the time of the passage of this act, so long as such bonds or interest-bearing obligations continue to comply with the laws in force prior to the passage of this act, but no such bond or interest-bearing obligation that fails, subsequent to the passage of this act, to comply with said laws shall again be a legal investment unless such bonds or interest-bearing obligations comply with the provisions of this act.

SEC. 37. If any street railway company, the bonds of which are a legal investment, prior to the passage of this act, shall fail, in any fiscal year subsequent to the passage of this act, to pay dividends equal to 4 per cent upon its outstanding capital stock, the bonds of such railway company shall cease to be a legal investment, until such company has complied with all the provisions of section 22 of this act.

SEC. 38. Prior to the 1st day of November, 1913, the bank commissioners shall ascertain what bonds and other interest-bearing obligations are legal investments under the provisions of this act and shall also ascertain what bonds and obligations are then legal investments under the provisions of section 36, and within the first 10 days of November, 1913, said bank commissioners shall send to each savings bank and to each bank and trust company having a savings department a certificate, stating over their signatures that upon investigation they find that the bonds and obligations specified in one list in said certificate are authorized as legal investments by the provisions of this act, and that the bonds and obligations specified in a second list therein are authorized as legal investments under the provisions of section 36.

SEC. 39. On the first day of November, 1913, and of the months of May and November in each year thereafter, said bank commissioners shall send to each savings bank and to each trust company having a savings department a similar certificate.

SEC. 40. Said certificate shall be prima facie evidence of the correctness of the findings of said commissioners, and shall so continue until the issuance of the next certificate of said commissioners, or of an intermediate certificate correcting and changing the list of legal investments in the certificate last issued. The purchase of any bond or obligation specified in any such certificate made before said respective bonds or obligations are withdrawn or omitted by the bank commissioners in a subsequent certificate issued by them shall be a legal investment under this act.

SEC. 41. Any person financially interested in any finding of the bank commissioners as to any bond or obligation may take an appeal therefrom to the superior court next to be holden at Hartford, which court shall have power to inquire into and render a judgment whether said bond or obligation comes within the provisions of this act as an authorized investment for savings banks. In case of such an appeal due service thereof shall be made upon the bank commissioners at least 12 days before the return day of said appeal.

SEC. 42. In the sections of this act which relate to railroad bonds, the word "debt" shall be construed to mean obligations issued or assumed, evidenced by a series of bonds or other interest-bearing instruments which mature at a time or times exceeding three years after their date, and the term "railroad corporation" shall be construed to mean a corporation which owns or is in possession of and operating a railroad or railway of the class usually operated by steam power. Street railway corporations are not railroad corporations within the meaning of this act.

SEC. 43. All acts or parts of acts inconsistent herewith are hereby repealed.

(The following paragraphs, S. 9, and 10 of section 3428 of the General Statutes, are herewith published because of the provisions of section 36 of chapter 127 of the Public Acts of 1913:)

(S) In the bonds of any railroad company organized under the laws of any of the States mentioned in this section, and which bonds are secured by a first mortgage as the only mortgage security given by such railroad company upon some portion of the railroad owned by it, or given by a railroad company, a majority of the capital stock in which is owned by the railroad company issuing such bonds, upon some portion of the railroad owned by it but leased or operated by the railroad company issuing such bonds, and which portion of such railroad in either case shall be located wholly or in part in one or more of the States mentioned in this section, provided the entire railroad of such company is located wholly within the United States; in the consolidated bonds of any railroad company incorporated by this State and authorized to issue such bonds to retire the entire funded debt of such company: *Provided*, That in every case such company shall have paid each year, for a period of not less than five years next previous to such investment, in addition to the interest on its funded indebtedness, dividends of not less than 4 per cent per annum upon its entire capital stock outstanding: *And provided further*, That said outstanding capital stock at the time of such investment equals or exceeds in amount one-third of the entire outstanding indebtedness of such bonds; (9) in the bonds of the following-named railroad companies, viz: Boston & Albany Railroad Co., Boston & Lowell Railroad Co., Boston & Maine Railroad Co., Concord & Montreal Railroad Co., Fitchburg Railroad Co., Harlem River & Portchester Railroad Co., Maine Central Railroad Co., New England Railroad Co., New York & New England Railroad Co., New York, New Haven & Hartford Railroad Co., and Old Colony Railroad Co.; also the following securities: Central Railroad Co. of New Jersey, general mortgage 5 per cent gold bonds, due July 1, 1987; Burlington, Cedar Rapids & Northern Railway Co. system, Cedar Rapids, Iowa Falls & Northwestern Railway consolidated first-mortgage 5 per cent bonds, due October 1, 1921, and Burlington, Cedar Rapids & Northern Railway Co. consolidated first-mortgage and collateral trust 5 per cent bonds, due April 1, 1934; Great Northern Railway Co. system, St. Paul, Minneapolis & Manitoba Railroad Co., Montana Extension, 4 per cent bonds, due June 1, 1937; Pacific Extension mortgage 4 per cent bonds, due July 1, 1940; Montana Central Railway Co. first-mortgage 5 per cent and 6 per cent bonds, due July 1, 1937, and Wilmar & Sioux Falls Railway Co. first-mortgage 5 per cent bonds, due June 1, 1938; Illinois Central Railroad Co. system, Chicago, St. Louis & New Orleans Railroad Co. consolidated mortgage five per cent gold bonds, due October 1, 1951; Chicago & Northwestern Railway Co. system, Chicago, St. Paul, Minneapolis & Omaha Railway Co. consolidated mortgage 6 per cent bonds, due June 1, 1930, and in the mortgage bonds heretofore issued which said consolidated mortgage 6 per cent bonds are to retire at maturity; Chicago, Milwaukee & Puget Sound Railroad Co. general consolidated and first-mortgage 5 per cent bonds, due November 1, 1937, and in the mortgage bonds heretofore issued which said general consolidated and first-mortgage 5 per cent bonds are to retire at maturity; Minneapolis & St. Louis Railroad Co. first and refunding mortgage 4 per cent bonds, due March 1, 1949, and in the mortgage bonds heretofore issued which said first and refunding bonds are to retire at maturity; Milwaukee & Northern Railroad Co. consolidated mortgage 6 per cent bonds, due June 1, 1913, and in the mortgage bonds heretofore issued which said consolidated 6 per cent bonds are to retire at maturity; Atlantic Coast Line Railroad Co. first consolidated mortgage 4 per cent gold bonds, due July 1, 1952, and in the mortgage bonds heretofore issued which said first consolidated mortgage bonds are to retire at maturity; Terminal Railroad Association of St. Louis general mortgage refunding 4 per cent sinking-fund gold bonds of 1953, and in the mortgage bonds heretofore issued which said general mortgage bonds are to retire at maturity; St. Louis, Iron Mountain & Southern Railroad Co., river and gulf division, first-mortgage 4 per cent bonds, due May 1, 1933; Buffalo & Susquehanna Railroad Co. first-mortgage 4 per cent gold bonds, due in 1951; (10) any general or consolidated mortgage bonds issued by any of the following-named railroad companies to retire at or the outstanding prior mortgage bonds secured upon the property covered by such general or consolidated mortgage: Chicago & Northwestern Railway Co., Chicago, Burlington & Quincy Railroad Co., Chicago, Milwaukee & St. Paul Railway Co., Chicago, Rock Island & Pacific Railway Co., Chicago & Alton Railroad Co., Cleveland & Pittsburgh Railroad Co., Lake Shore & Michigan Southern Railroad Co., Michigan Central Railroad Co., Morris & Essex Railroad Co., New York Central & Hudson River Railroad Co., Pennsylvania Railroad Co., St. Paul, Minneapolis & Manitoba Railway Co., Eastern Railway Co. of Minnesota, northern division, and Louisville & Nashville Railroad Co., and in the mortgage bonds hitherto issued which such consolidated or general mortgage bonds are to retire at maturity; Louisville & Nashville Railroad Co., and in the mortgage bonds hitherto issued which such consolidated or general mortgage bonds are to retire at maturity: *Provided*, That at no time within five years next preceding the date of such investment in such general or consolidated mortgage bonds issued by any of the railroad corporations last named shall such railroad corporation have failed to pay regularly and punctually the principal, at maturity or as extended, and interest on all its mortgage indebtedness, and, in addition thereto, dividends upon all its outstanding capital stock during the preceding five years: *And provided further*, That at the date of every such dividend the outstanding capital stock of such railroad corporation shall have been equal to at least one-third of the total mortgage indebtedness of such railroad corporation, including all bonds issued or to be issued under any mortgage securing any bonds in which such investment shall be made. No bond of any railroad corporation named in this section shall be a legal investment for a savings bank when such corporation or the system of which it is a part shall fail to pay dividends on all of its capital stock; and this section shall not be held to authorize any investment in the bonds of any corporation operating its railroad exclusively by any means other than steam as a motive power or in the bonds of any street railway company.

[Public acts of 1905, substitute bill for Senate joint resolution No. 131, ch. 207.]

An act amending an act concerning investments by savings banks.

Chapter 171 of the public acts of 1903 as amended by chapter 184 of the public acts of 1905 is hereby amended to read as follows: "Savings banks may invest their deposits and surplus in the first-mortgage bonds of the Hartford Street Railway Co. and the Fair Haven & Westville Railroad Co., and in all bonds of the Consolidated Railway Co. and the Connecticut Railway & Lighting Co."

SEC. 3435. Limit of deposit of one person in a year. Savings banks may receive on deposit from any one individual, in his own name or in the name of another, in any one year, a sum not exceeding $1,000.

SEC. 3436. Disclosure of facts about deposits in trust: When a deposit is made in any savings bank by one person in trust for another the name and residence of the cestui que trust and the nature of the trust shall be disclosed and the deposit shall be credited to the depositor as trustee for such person; and in case it be a trust created by deed, will, or judicial appointment, a certificate to that effect shall be filed at the time of the deposit. If no notice of the existence and terms of such a trust has been given in writing to the bank, in the event of the death of the trustee the deposit, with the interest thereon, may be paid to the cestui que trust.

SEC. 3437. Deposits of minors: When any deposits shall be made in a savings bank by a minor the receipt of such minor shall be a sufficient and valid release and discharge for the payment of such deposit or any part thereof.

—

[Public acts of 1907, House bill No. 325, ch. 61.]

An act concerning payment of joint deposits by savings banks.

When deposit is made jointly payment may be made to either depositor: When a deposit has been or shall be made in any savings bank in the name of two persons and payable to either or to the survivor, such deposit, or any part thereof, or any interest or dividend thereon may be paid to either of said persons, and the receipt of the person so paid shall be a valid and sufficient release and discharge on account of the payment so made.

—

[Public acts of 1907, house bill No. 323, ch. 62.]

An act concerning the pledge of deposits in savings banks.

Actual transfer on books of bank required, when: Any deposit in a savings bank may be pledged by delivery of the pass book evidencing such deposit to the pledgee, with an order for its transfer; but no such pledge shall be effective to secure such deposit against any person other than the pledgor, his executor, or administrator, unless an actual transfer of said deposit shall have been made upon the books of the savings bank or a copy of the order for such transfer shall have been filed with the savings bank holding such deposit.

—

[Public acts of 1907, substitute for senate bill No. 162, ch. 65.]

An act concerning the payment of orders on savings bank deposits.

Order may be paid after death of drawer, when: Any savings bank may pay an order for a sum not exceeding $300 drawn by a person who has funds on deposit to meet the same, notwithstanding the death of the drawer, if presentation is made within 30 days after the date of such order, and at any time if the corporation has not received actual notice of the death of the drawer.

—

[Public acts of 1907, substitute for house bill No. 583, ch. 130.]

An act concerning lost pass books.

Payment of deposit or issuance of new book when pass book is lost, how made: When any pass book issued by a savings bank or other institution for savings has been lost or destroyed the person in whose name such book was issued, or his legal representatives, may make written application to the bank which issued such pass book for payment of the amount of the deposit represented by said book or for the issuance of a duplicate book therefor, and shall give public notice of such application by advertising the same at least once a week for three weeks successively in a newspaper published in the town in which such bank is located, or if no newspaper be published in said town, in a newspaper having a circulation in said town. If said books shall not be presented to said bank within six months after the date of the first advertisement, as foresaid, said bank shall, upon proof that notice has been given as hereinbefore provided, pay the amount due on said book or issue a duplicate book therefor, and upon such payment or delivery of a new book all liability of the bank on account of the original book shall terminate.

SEC. 3439. Rate of interest on loans: No savings bank shall demand or receive on any loan, either as bonus, commission, or tax, or in any other way, directly or indirectly, more than 6 per cent a year, and at that rate for a longer or shorter period; but the taking of interest in advance for a period not to exceed six months and the reimbursement of any money paid by a bank for insurance on property mortgaged to it shall not be a violation of this section.

SEC. 3440. Dividends: The net income of any savings bank in excess of one-eighth of 1 per cent of its deposits actually earned during the six months last preceding, and no more, may be semiannually divided among its depositors. No dividend shall exceed a rate of 4 per cent per annum, except as provided in section 3441.

—

[Public acts of 1913, substitute for House bill No. 174, ch. 187.]

An act concerning supervision of banks, savings banks, and trust companies.

SECTION 1. Section 3441 of the general statutes is hereby amended to read as follows: "No savings bank shall make any dividend, except as provided in section 3440 of the general statutes, until its surplus shall have accumulated to an amount equal to 3 per cent of its deposits. Such surplus shall be kept as a contingent fund, but no savings bank shall carry to its contingent fund more than 15 per cent of its deposits. Such contingent fund shall include all items of excess earnings not included in the interest account, and such portion of the interest account as exceeds the amount necessary to pay the semiannual dividend. Any surplus in excess of 15 per cent of the deposits shall be divided among the depositors entitled to such dividends in sums of not less than 1 per cent of its deposits."

SEC. 3442. Discrimination in dividends: In declaring dividends the directors of savings banks shall have power to discriminate between

deposits of $1,000 or less and those over that sum. Such discrimination shall not exceed 1 per cent per annum, and if at any time a discrimination becomes necessary it shall be made in favor of those deposits which are less than $1,000.

SEC. 3443. Regulation concerning officers: No more than three officers of any one savings bank shall be officers of any one bank of discount or circulation or trust company; and no cashier of a bank of discount or circulation shall be treasurer of any savings bank having over $500,000 deposits

SEC. 3444. Compensation of presidents of savings banks limited: Savings banks whose deposits exceed $400,000 may pay their presidents such compensation as their directors, managers, or trustees deem reasonable, not exceeding $300 a year; those whose deposits exceed $1,000,000 may pay not exceeding $500 a year; those whose deposits exceed $2,000,000 may pay not exceeding $750 a year; those whose deposits exceed $3,000,000 may pay not exceeding $1,000 a year; those whose deposits exceed $5,000,000 may pay not exceeding $1,500 a year; those whose deposits exceed $7,500,000 may pay not exceeding $2,000 a year; and those whose deposits exceed $10,000,000 may pay not exceeding $2,500 a year: *Provided*, That in cases where such compensation shall exceed $300 a year it shall be determined by an affirmative vote of three-quarters of the whole number of directors, managers, or trustees, as the case may be.

[Public acts of 1913, substitute for House bill No. 174, ch. 187.]

An act concerning supervision of banks, savings banks, and trust companies.

SEC. 2. Section 3445 of the general statutes is hereby amended to read as follows:

"The treasurer of every savings bank shall give a bond in a sum not less than $10,000, payable to such bank, and shall give in the case of personal surety a new bond as often as once in every six years. Every bond required by this section and the surety thereon shall be to the satisfaction and acceptance of the directors or trustees of such bank. No president, director, or trustee of any such bank shall be surety on any such bond. Such bonds and all certificates of the renewal thereof, and in cases of perpetual bonds the latest receipt for premium, shall forthwith be recorded at length on the books of such bank and in the office of the secretary of the state, and shall at all times be subject to the inspection of the bank commissioners, and shall be inspected by them at every examination of such bank. The president of such bank shall safely keep the original bonds so given and all certificates of the renewal thereof. In case of the loss of any such bond a copy thereof, certified by the secretary of the state, may be admitted in evidence on the trial of any civil or criminal action.

SEC. 3. Section 3446 of the general statutes is hereby amended to read as follows: No officer, director, or trustee of a savings bank shall be a borrower, or surety for a borrower of any of its funds, or receive any money or valuable thing for negotiating, procuring, or recommending any such loan from such savings bank, or for selling or aiding in the sale of any stocks or securities to such savings bank. The word "director" or "trustee," as used in this section, shall not include any incorporator of any bank or trust company unless such incorporator shall have been elected as a director or trustee and shall have accepted such office.

SEC. 4. The directors or trustees of every savings bank or other bank or trust company having a savings department shall semiannually or oftener take or cause to be taken a trial balance of the depositors' ledgers and report to the bank commissioners the amount of any difference if such balance does not agree with the amount of deposits in the general ledger, and the penalties for a violation hereof shall be those set forth in section 3453 of the general statutes. Once in five years the trial balance herein referred to shall be taken by a certified public accountant employed by said directors or trustees.

SEC. 5. Section 3452 of the general statutes is hereby amended to read as follows: The treasurer of each savings bank on or before the 1st day of November in each year and oftener if required by the bank commissioners shall transmit to them a sworn statement of its condition as of the 1st day of October, giving the par value and book value of its assets and information as to all particulars required in the annual statements of banks and trust companies to said commissioners.

SEC. 6. Section 3447 of the general statutes is hereby amended to read as follows: The directors, managers, or trustees of every savings bank shall annually appoint not less than two auditors, who shall not be directors, managers, or trustees thereof, who shall examine the books, accounts, and securities belonging to such bank and make a sworn statement showing the true condition thereof on the 1st day of October in each year, which shall be kept on file in the office of such bank and an attested copy forwarded to the bank commissioners on or before the 1st day of November in each year. Such auditors shall cause to be exhibited the last trial balance of the depositors' ledgers, verifying the same with the controlling account in the general ledger, and immediately report any variance to the bank commissioners.

SEC. 3448. Notice of meetings: The treasurer of each savings bank shall, at least 10 days before each meeting of the corporators, mail or deliver to each a written or printed notice of the day and hour of holding such meeting; and if he shall neglect to give such notice he shall be fined $100.

SEC. 3449. Removal of corporators: At the annual meeting of any savings bank when two-thirds of all the corporators of such bank are present a corporator may be removed by a four-fifths vote.

SEC. 3450. Vacancies in office. Assistants: The directors, managers, or trustees of each savings bank may fill any vacancy in any office in such bank, and the person chosen shall hold such office till another is chosen in his stead. When any officer can not perform the duties of his office they may appoint an assistant to him to serve during their pleasure, up to the time of the next annual meeting of the corporation; and such assistant shall have the same powers and duties as such officer.

SEC. 3451. Annual statement of unused accounts: The treasurer of every savings bank shall annually, on or before the 10th day of July, deliver to the comptroller a sworn statement containing the name and amount standing to the credit of every depositor who shall not have made a deposit therein or withdrawn therefrom any part of his deposit, or any part of the interest thereon, for a period of more than 20 years next preceding; but this section shall not apply to the deposit made by any person known to the bank to be living. The comptroller shall communicate the statements which shall be so delivered to him to the general assembly on or before the third day of its next session. If the treasurer of any savings bank neglects or refuses to comply with the provisions of this section, he shall be fined $100.

SEC. 3453. Penalties affecting officers and directors: The directors, managers, or trustees of any savings bank, assenting to a violation of any provision of law relating to savings banks, shall be jointly and severally liable to such savings bank for any loss which may result therefrom. Every officer, director, or trustee of any savings bank who shall intentionally violate any of the provisions of law relating to savings banks shall be fined not less than $100 nor more than $1,000, and the State's attorney for the county where such bank is located shall prosecute any person charged with such violation on complaint by the bank commissioners.

SEC. 3454. General penalty: Every person who shall violate any provision of law in relation to banks, savings banks, or trust companies, for which no other penalty is provided, shall be fined not less than $100 nor more $500.

DEPOSITS.

It is interesting to note at this time that the amount of deposits in savings banks of Connecticut—the data being taken from the Connecticut Register Manual for 1913 (p. 372)—is as follows:

Total amount of deposits in savings banks of Connecticut Jan. 1, 1913	$291,753,432.82
Increase during 1912	10,699,517.35

Savings-banks deposits first congressional district, Connecticut.

Berlin Savings Bank, Kensington	$589,748.45
Bristol Savings Bank, Bristol	3,772,926.73
Burritt Savings Bank, New Britain	1,767,926.40
Collinsville Savings Society, Collinsville	1,124,685.69
Dime Savings Bank, Hartford	3,915,789.75
Farmington Savings Bank	5,245,552.61
Mechanics Savings Bank, Hartford	8,244,043.61
People's Savings Bank, New Britain	77,874.55
Savings Bank of New Britain	7,120,872.84
Savings Bank of Manchester	930,447.01
Society for Savings, Hartford	35,581,719.49
Southington Savings Bank	1,660,034.35
State Savings Bank, Hartford	5,907,846.26
Suffield Savings Bank, Suffield	623,976.51

Currency.

EXTENSION OF REMARKS
OF
HON. JAMES A. FREAR,
OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, September 17, 1913,

On the bill (H. R. 7837) to provide for the establishment of Federal reserve banks, for furnishing an elastic currency, affording means of rediscounting commercial paper, and to establish a more effective supervision of banking in the United States, and for other purposes.

Mr. FREAR. Mr. Speaker, when Congress was called in special session by the President, he urged upon us a revision of the tariff and thereafter a revision of the currency system.

Promises that the high cost of living would be reduced by tariff legislation and that no legitimate business interest would be disturbed, yet echoed in our ears when in his second message of April 8 the President said:

It would be unwise to move headlong with reckless haste or with strokes that cut to the very roots of what has grown up amongst us by long process and at our own invitation. * * * We must build up trade; especially foreign trade. We must build up industry as well and must adopt freedom in the place of artificial stimulation only so far as it will build up and not pull down.

This general statement was construed by the country to recommend a policy of downward tariff revision that would not destroy legitimate business or the protective laws under which national prosperity has so rapidly been advanced. Progressive Republicans with Progressive Party Members in this House, whose party platforms recognized the protection principle, stood ready to join hands with our Democratic friends in securing a just and equitable tariff law, reduced to a point measured by the difference in cost of production here and abroad.

By methods that will ever be condemned, neither the Republican nor Progressive Party Members of the House were permitted to have any voice in the preparation of the Underwood tariff bill. It was made a strictly partisan measure, ignoring all suggestions from Republicans or from the Tariff Board. While providing for a tax on incomes, that all parties favor, it completely swept away protective duties on many legitimate lines of business, giving preference to favored localities, and the bill was then hurriedly passed against the protest of every Republican in this House, many of whom favor an income tax and a genuine equitable downward revision of the tariff.

WILL COST OF LIVING BE REDUCED?

As if to distract attention from preelection pledges, that living expenses would be reduced, it has repeatedly been reiterated by members of the new administration, that the ultimate consumer can not expect to materially profit by tariff reductions because the present tariff of less than 25 cents on the raw wool contained in a $15 overcoat or a duty on wheat heretofore given to the farmers' products but now removed, will be lost among middlemen before reaching the consumer.

The Department of Labor of the present administration has just issued a bulletin based on statistics to the effect that the

retail price of sugar will probably not be permanently reduced or affected by a reduction of tariff duties because of the profits exacted by refiners, jobbers, and retailers, corroborating arguments that have been repeatedly urged against free sugar. On the other hand, it has been admitted that in wiping out home production and home competition, through the destruction of the sugar business, which will be precipitated by the new tariff bill, a loss is to be incurred by growers and manufacturers estimated at $100,000,000, and by some authorities reaching double that amount. Where under the new tariff law is to be found compensation for this great loss to the industries of the country and for a direct loss of $52,000,000 in annual revenues?

FREE TRADE WILL NOT REACH EXTRAVAGANCE.

A new gospel of revelation has also discovered that while tariffs and trusts in one form or another have exacted unjust tribute in the past, every step in remedial legislation which raises the standard of labor, necessarily occasions additional cost to the consumer. Further, that the cost of production is frequently a small fraction of the price paid by consumers, and that extravagance and waste in securing comforts and luxuries unknown to our forefathers must be paid for and can not be avoided by drastic tariff reductions.

It is further declared by our Democratic friends that a sudden change in tariff rates may cause special interests and designing men to precipitate a panic, and in order to prevent such calamity a new currency law is urged which will enable business men to procure needed funds when possessed of good loan collateral. For this reason a currency bill has been hastily introduced and we are about to vote upon it.

Every Republican in the House voted against the Underwood bill, believing it was worse than existing law, and that action has been vindicated by the Democratic majority in the Senate, which tacked 676 amendments onto the House bill, changing the original document so that, as a tariff expert recently said on this floor, its most intimate friend would not recognize it through the multitude of changes plastered over its physiognomy.

A QUESTIONABLE EXPERIMENT.

Is the proposed new tariff law a dangerous experiment? Consider for a moment what it proposes to do. Average tariff rates are not conclusive as to discriminations, but what is to be expected from the new law, which averages a rate of less than 27 per cent, or 1 per cent lower than the Underwood bill and far lower than any tariff law ever before enacted? We condemned the Payne-Aldrich bill because of its unfair exactions through its average rate of 40 per cent, but the average rate contained in the Wilson-Gorman law of 1894, which wrecked the Cleveland Democratic administration, was 39.45 per cent, or less than 1 per cent below the Aldrich tariff law. What may we now expect upon discovering that the so-called free-trade Wilson law of 1894 was approximately 50 per cent higher than the proposed Underwood-Simmons tariff law, with its new freedom for foreign producers?

The Underwood bill placed most of the northern farmers' products on the free list. The character of this discrimination has been frequently explained, and it is sufficient now to say that while the bill gives protection to many southern products, extending from the whiskies and tobaccos of Kentucky to rice, goats, and peanuts in other Southern States, it places wool, flour, potatoes, dressed meats, sugar, and, finally, wheat and other products upon the free list.

I joined in the opposition offered against the sham Canadian reciprocity bill. Its passage proved the undoing of a President. It proposed to throw down the bars which to some degree protected the farmers of this country against competition with cheaper lands and cheaper labor possessed by our northern neighbor and was unjust to our own agricultural interests. What shall be said of the new tariff bill that sweeps away protection and without reciprocal advantages gives to Canada and every other country possessing cheaper lands and labor, equal privileges in our home market and yet retains duties on manufactured products which the farmer is compelled to buy?

MOVEMENT FROM THE FARM TO THE CITY.

One of the most serious problems confronting our country is the movement from the farm to the city. It is a change that affects not only the farmer but all those who depend upon the farmer. Of what avail is legislation by States seeking to make agricultural pursuits more remunerative or otherwise attractive when a tariff bill is being enacted that—

strikes at the very roots of what has grown up amongst us and at our own invitation—

to use the language of the President.

These debates have disclosed that the admitted difference in the cost of production of wheat here and abroad runs from a minimum of 6 cents a bushel to 10 cents and over. All protection has been swept away by the new tariff. The 1909 wheat crop of this country reached $657,656,000. No man can accurately determine in advance the effect of opening our home market to the free wheat of Siberia, Argentina, and Canada; but whatever the loss may be, it is directly borne by the farmer and indirectly by all classes that depend upon him.

Packers, distributing agencies, and a vast army of consumers in this country are protesting against the scarcity of beef, with its accompaniment of higher prices, and they are appealing to American farmers to raise more stock to meet the growing demand of a home market. With the same breath the framers of this new tariff law drive our farmers into direct competition with free dressed meats imported from Mexico, Australia, and other countries, while free wool, according to the supporters of the new tariff, will discourage the sheep-growing industry of this country.

Six hundred and ten thousand farmers in 1910 owned over 52,000,000 sheep, valued at $232,841,585. These sheep produced $65,000,000 in wool that year, and yet with a duty of 11 cents a pound, $23,532,000 in raw wool was imported from foreign countries in 1910. The new rates sweep away all protection and immediately throw open the doors to Australia, New Zealand, and Argentina, which alone possess 180,000,000 sheep.

FIFTY-EIGHT PER CENT REDUCTION IN DAIRY PRODUCTS.

The total value of dairy products in this country in 1909 reached $600,000,000, practically equaling wheat, of which amount Wisconsin, standing first, produced over one-tenth, consisting almost entirely of butter and cheese. Existing law levies a 6-cent duty per pound on butter and cheese imported from abroad, but the proposed law reduces the rate to 2½ cents.

In confirmation of our fears of the effect of the new law we learn through the press that hundreds of millions of dollars in foreign manufactured products in bond at the port of New York are awaiting the assured passage of the law. The press also announced that a portion of these goods consists of thousands of butter firkins from Siberia and Argentina. Will a reduction in living expenses occur through these importations or will the tariff be absorbed by shippers, as claimed? Time will demonstrate; but whatever the result, in his home market, the American farmer must now meet competition with the world.

FARMERS DO NOT CREATE PANICS.

When the shoe pinches, farmers do not depress the money market by gigantic failures, but after working double the hours daily permitted under factory union rules, the farmers take an account of stock whenever they pay interest on the 10,655 farm mortgages in my district, approximately one-half the whole number of farms, or when they pay taxes, and be it remembered no farm ever escapes the assessor. Smaller profits mean greater economies or abandonment of the farm to join the tide moving cityward. This is the invitation held by the pending tariff bill, for the President has declared we are to set ourselves free "by removing the trammels of a protective tariff."

Members of Congress have agricultural yearbooks, agricultural bulletins, and garden seeds furnished to them by the Government for distribution among their constituents. The purpose is to increase knowledge and interest in agriculture. Why this intense appreciation of the intellectual welfare of the farmer if we chop off his income with a tariff meat ax?

In a letter received from the officials of an organization which represents "hundreds of thousands of farmer members" is the statement that—

All history proves that agriculture is the basis of national prosperity and the broadest, deepest, and most fundamental problem before the American people to-day is the insurance of agricultural progress, prosperity, and development.

To this proposition every thinking man must assent. Referring to the pending tariff measure, it continues:

If we are to have free raw sugar, then free refined sugar; if free wool, then free woolens. * * * The farmers of the country insist upon not being discriminated against in the letting down of the bars.

No one can doubt the fairness of this demand, and yet the new tariff law turns a deaf ear to this protest made on behalf of the food producers of the country.

HOW WILL A LOW TARIFF HELP LABOR?

A brief statement of one other assured result has been repeatedly urged against the passage of an extreme reduction in tariff rates. To labor in this country has been given privileges and opportunities not offered elsewhere. Hours of labor, regulated by State statutes or agreement, minimum wages, prohibited child labor, workmen's insurance, and other progressive laws involve additional privileges to labor, but an enlarged expense that must be met by the employer. When to these privileges are added double wages, compared to the average paid abroad, it follows as sure as night follows day that competition with unrestricted foreign labor, when the tariff is reduced below the

safety line, exists, if at all, through reduced expenses or the employer must surrender his home market to the foreign producer, and with a surrender comes idle labor, without the wherewith to buy. That was the effect of the Wilson tariff bill and the logical effect of any tariff bill which gives our home market over to the foreign producer. The conditions disclosed at Lawrence, Mass., may be duplicated in hundreds of cities throughout the country if history repeats itself, and we may discover we have swallowed a remedy that is worse than the disease. Business prosperity is not measured by political theories or ingenious arguments, but by uncontrovertible statistics, and, as a general proposition, it is agreed that when the balance of trade with foreign countries is in our favor, times are prosperous in this country. Government statistics show that out of $4,278,000,000 in our foreign business last year, exports were 40 per cent greater than imports, the balance of trade in our favor amounting to $652,600,000. During the past 12 years, and under existing tariff laws everywhere acknowledged to be imperfect, our foreign exportation of manufactured products increased 110 per cent, a greater proportion than in any other country in the world.

WHO IS TO BE BENEFITED?

Will a new tariff law based upon free-trade theories improve this prosperous condition? If so, how? As has before been asked, will the proposed tariff law cause capital to seek investment? If so, when or where? Will it give employment to one additional laborer? Will it increase the wages of a single employee? Will it increase the value of farm products in a single instance? Will it persuade one boy or one girl to remain upon the farm? Will it reduce the cost of high living, or will it bring prosperity or disaster to the country?

Never since the days of the 1894 Wilson bill have we beheld such blind confidence on the part of our Democratic friends that somehow, in some way, the proposed tariff bill, which is much lower than the Wilson bill, will better the conditions of the producer and the consumer. If it does, and every man, whatever may be his politics, sincerely hopes such will be the case, it is evidence that our country has grown so strong that through an elastic currency we can withstand any storm. If you gentlemen across the aisle are right and we are wrong, then the tariff will forever cease to be a political issue.

THE SECRET CAUCUS V. CANNONISM.

One further phase of this tariff and currency legislation is as objectionable as Cannonism in its most despotic days. Never has the caucus gag in legislation been more completely applied than during this session. The gentleman from Kansas [Mr. MURDOCK] pointedly says:

The caucus is the design of the devil. It is not a part of representative government.

A Democratic Member [Mr. ADAIR] declared of the Underwood bill that it would never have received the indorsement of a handful of Members on that side of the House excepting through the caucus, yet proudly added he would vote for it without a change in the dotting of an "i" or crossing of a "t." During the discussion of this currency bill the gentleman from Georgia [Mr. HARDWICK], one of the leaders on the other side of the House, said:

It is my purpose to vote for this bill, not because I like it * * *, but I conceive it is my duty to do so because of the caucus action of my party.

To make clearer his devotion to party he added:

When I enter a Democratic caucus I always support a nominee no matter how much I dislike him or how great a rascal I think he is.

Speaking of the pending measure, the Democratic Member from Texas [Mr. CALLAWAY] says:

It was whipped through the committee by the administration, brought into caucus and made a party measure by the administration, and whipped through the caucus by the same power.

Continuing, he pertinently adds:

No suggestions the Republicans could offer would render any assistance. Why shut them out completely by binding the overwhelming Democratic majority to this administration bill?

Other Democratic authority has been offered on this floor of the legislative travesty on representative government now being enacted.

The gentleman from Minnesota [Mr. ANDERSON] who has refused to serve longer on the great Ways and Means Committee, declares he was not permitted to attend any hearing or participate in any committee meeting that assumed to frame the Underwood bill. Not one Republican member of the committees required by law to report the tariff or currency bills has been permitted to be present when either bill was being framed, and every one of the 4,000 items of the tariff bill was the product of a Democratic secret caucus. Not one amendment, out of hundreds offered to both bills, has been accepted. Never before has the secret caucus been invoked in the Senate. Never has it assumed such power in the House. It destroys representation to every district in the country that has sent a Republican or Progressive Party Member to Congress.

THE CAUCUS DISFRANCHISES DISTRICTS.

Through the secret caucus, three Democratic Members from Wisconsin admitted to the caucus are given the legislative representation accorded to 11 Members of our State by the Federal Constitution. Eight Members and their districts have been disfranchised as completely as are the negroes of the South, and the same argument has been used on this floor to justify the disfranchisement in each instance. Judging by the sacrifice in agricultural products and discrimination against the dairy interests of my own State in favor of the whisky distillers, tobacco interests of Kentucky, and other products of the South, the three Members have been unable in the Democratic secret caucus to protect these important interests.

Can a more flagrant violation of legislative rights be conceived than the secret-caucus treatment of the tariff by both Houses? The senior Senator from my own State, an experienced legislator and tariff student of national reputation, was chosen a member of the Senate Finance Committee and a Senate tariff conferee because of his long and important public service. Yet, although one of the national leaders in formulating progressive legislation, he was denied participation in the deliberations of either committee because he is a Republican. Why should three Democratic Members from Wisconsin, none of whom has any special knowledge of tariff schedules, be permitted to have a voice, however feeble, in framing the tariff law, when all the remaining Wisconsin Members of Congress in both Senate and House were shut out?

Pursuant to this same principle, the one Democratic Member for Minnesota is more powerful than the remaining eight Members, with the two Republican Senators included, because he alone was permitted within the secret caucus. However, the southern Members controlled the caucus deliberations, and Minnesota received the same treatment that has been accorded to Wisconsin under the new tariff law.

THE MACHINE WITHIN THE MACHINE.

Is there a machine within a machine? A leading Democrat, Senator HITCHCOCK, has so declared from the floor of the Senate. Mr. ANDERSON, of Minnesota, gives a reason for the granting or refusal to grant tariff favors when he says to us that 14 Southern States send 130 Democrats to the House and control the Democratic membership and legislation of the House. These 14 States hold 38 out of 58 chairmanships, including every important chairmanship excepting one, the Committee on Appropriations. This powerful influence permeates all legislation, he has declared.

What are the practical results of caucus legislation? The House passed the Underwood bill of 4,000 items by a strict party vote. Few men knew what the bill actually contained. It went to the Senate, and after two months came out of the Senate caucus with 676 amendments. On every sixth item the Democratic secret caucuses at opposite ends of the Capitol disagreed on a measure which every Member of the House was asked to swallow without being permitted to change the dotting of an "i" or the crossing of a "t."

I know human judgment differs as to the relative percentage of good and bad to be found in the existing tariff law, the Underwood bill, and the Senate bill; but aside from the threatened dynamite found in the bills given to us by the Democratic secret caucuses, admittedly framed on free-trade theories, the fundamental danger from such methods of legislation is more serious in its consequences than all the supposed iniquities which exist in the Aldrich bill and the Underwood bill combined.

Neither tariff bill now in conference is a deliberate expression of the majority of either House. Each is an utterance of a majority of a secret caucus, secured through secret means over men who were bound together by an unconscionable agreement. What shall be said of a "new freedom" that gags all opposition, repels all aid unless proffered by Democrats, and in its operation virtually destroys the representative government guaranteed by the Constitution?

IMPERATIVE NEED OF CURRENCY LEGISLATION.

Advocates of the new tariff measure admit it may create serious business disturbances unless a more elastic currency system is made available to meet the emergency. Whatever may be his politics, the prosperity of our people is of equal importance to every man, and I am convinced that the immediate necessity for remedial currency legislation is not exaggerated.

Many defects have been pointed out by critics in the pending currency bill, but if the law can be put in operation through co-

operation of banking interests, I believe it is an improvement over the present law, because it affords larger opportunities to raise emergency currency wherever satisfactory security is available. I would include the smaller banks, if they so willed, enlarge the period for which farm loans can be carried, lessen the political complexion of Federal board membership, and favor many other changes, but all this may be accomplished by future amendment.

It is repugnant to be forced to vote for a secret-caucus measure which has placed every Republican Member of Congress outside the pale of legislative participation, but I shall vote for it, because I believe the bill is an improvement over existing law and because of its imperative need by a business world that will soon be struggling in the throes of new tariff adjustments.

Glass-Owen Currency Bill.

EXTENSION OF REMARKS

OF

HON. DAN V. STEPHENS,

OF NEBRASKA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, September 18, 1913,

On the bill (H. R. 7837) to provide for the establishment of Federal reserve banks, for furnishing an elastic currency, affording means of rediscounting commercial paper, and to establish a more effective supervision of banking in the United States, and for other purposes.

Mr. STEPHENS of Nebraska. Mr. Speaker, the fight waged by President Andrew Jackson against rechartering the old United States Bank, which the Government had created and turned over to private control, is one of the most dramatic contests ever waged in civil times. This bank was given the power of note issue and carried the Government deposits and had the Government prestige and support. With this great advantage it was not long before it grew to such power and influence that its president, Nicholas Biddle, conceived the idea that it was bigger and more influential than the Government which it had been attempting to dominate. At any rate, when President Jackson opposed the rechartering of the bank, Nicholas Biddle went to him and threatened him with defeat for reelection if he did not sign the bill, and then proceeded to show President Jackson how many States the bank could control and just how he could defeat him. Jackson said something about that being too much power for any corporation to possess in a Republic like this and straightway laid violent hands on that institution. It was a long and bitter struggle between the President and Congress, as Congress favored the bank, but the President finally won by a narrow margin. But when the people got a chance at the question at the next election the President was so overwhelmingly indorsed at the polls that from that day to this there have never been enough votes in Congress to pass a national currency bill that provided for anything like a privately controlled central bank.

THE ALDRICH CURRENCY BILL.

A few years ago a large sum of money was spent by the Monetary Commission created by Congress, which assembled the largest library on banking and currency in existence. As a result of its studies it presented to Congress what is known as the Aldrich currency bill. This bill proposed a great central bank, privately controlled in effect, which was the essential objection to the old United States Bank. This bill never stood the slightest show of becoming a law. A central bank privately controlled would be a menace to the Republic, as was the old United States Bank, and the people will not stand for it. Yet it is essential that the legal money reserves of the banks of the Nation should be united for the common defense against panics and business depression. The question has been how to unite these reserves under one control with safety and yet keep the Government out of the banking business. The result has been realized in the Glass-Owen bill. In order to show the necessity of this legislation let us look at existing banking conditions in the United States.

EACH BANK IS INDEPENDENT.

Each national bank is an independent corporation standing absolutely alone. This is a most desirable feature at all times save one, and that is in times of financial disturbances. The branch banking system of Canada and other countries is satisfactory for big business, but the lack of self-interest of the men in charge of these branches leaves each town and community without the splendid influence that an independent bank has upon the community, but they are comparatively free from panics. An independent banking system like ours gives to each town a self-interested, hustling banker who is encouraging and supporting every movement for the development of the country around his bank. He is vital to the country's growth and is interested in every man's success, but he is subjected to the dangers of money stringencies because he has no big bank with millions of dollars in reserve to protect him. Therefore it is not remarkable that he sometimes finds it impossible to carry the whole community on his back when a financial storm comes.

What we want, therefore, is to preserve our splendid independent banking system, with all of its virtues, and add to it the protection that it needs in times of stress. At present when a financial storm appears the first bank in its path is liable to go down under the impacts of cowardly capital trying to save itself. Other bankers see what has happened and immediately begin to curtail credit and force borrowers to pay up in order that the bank may have cash to meet the demands of depositors. Business of all kinds is paralyzed for want of capital and credit. Manufacturers close down one after another for want of money to meet pay rolls, and labor is thrown out of employment, and finally the whole country is in the throes of a panic. Panics nearly always start in New York City; so when the bankers fail to check them the Government always comes to their aid with immense deposits from the United States Treasury, which restore confidence and furnish funds to take the place of those that sought cover at the first sign of danger. The net result of a Nation-wide panic is always the transfer of untold millions of wealth from the hands of those who earned it in the sweat of their faces to the pockets of those who were able to grab the most ready money for use at the time when the panic was at its crest and when people had to let go of their property to get money. The wreck and ruin to men's fortunes that follow in the wake of one of these panics, and the greed, selfishness, and cowardice displayed is a sad commentary on human nature. It is a parallel to what occurs in a railroad wreck, where human beings lie mangled and bleeding and the ghouls rob them of their money and jewelry under the pretense of relieving suffering and saving lives. So it is in one of our bankers' panics—those who control the credit and ready money reap a bountiful harvest from the broken and bleeding business men of the Nation.

THE UNITED STATES TREASURY CHECKS PANICS.

The fact that at every sign of financial distress the banks must be supported by the Treasury of the United States with large deposits of cash to enable them to cover the demands made upon them for money has led to the conception of the Glass-Owen currency bill. If the Government must back up our independent banks now whenever they get into trouble, it is argued, why not prepare a comprehensive currency measure that will allow this cooperation in a perfectly legal and businesslike manner, with every safeguard provided for the protection of the United States Treasury and the depositors of the banks, by making panics impossible? The answer to the argument is this splendid Glass-Owen measure that is now before Congress.

Under the present law the national banks must keep a legal reserve of lawful money (gold, silver, and greenbacks) in their vaults or with reserve agents to protect their depositors. The amount country banks must keep is $15 on every $100 of their deposits; reserve city banks and central reserve city banks, $25 on every $100 of deposits. The joker in this law is the right granted country banks to keep $9 of the $15 with a reserve city bank, and a reserve city bank can keep half of its $25 reserve in a central reserve city bank. The result of this law was soon realized by the big bankers, who conceived it, when they began to pay the country banks 2 per cent on their reserves the law permitted them to keep with reserve agents. The law would not permit the country banker to loan the last $15 on every $100 deposited with him, but singularly it allows the reserve agent to loan $9 of it if the country banker will deposit it with him. So all the reserve agent has to do is to offer 2 per cent interest on it and every country banker will deposit the amount the law allows him to deposit with his reserve agent. The law will not permit the reserve city banker to loan the last $25 on every $100 of deposits he carries, but he can send half of it to a central reserve city banker, where he can get 2 per cent on it. It was a clever scheme originated in the minds of the big bankers in New York City, and aided by their handy men in Chicago and St. Louis, for the purpose of drawing into their keeping the immense legal reserves of the banks of the United States. With the legal reserves also went other untold millions, until New York City has become not only the greatest money center, but the greatest gambling and wildcat

promoting center in all the wide world. The law looks innocent enough. No bank is required to keep its reserves in New York City. It simply says they may keep portions of them there if they wish. Since the banks are not allowed to loan their reserves, the 2 per cent sop is sufficient to get most all of them into the big centers of New York, Chicago, and St. Louis. New York City gets the lion's share because her size and trade attracts them.

The evil results that have followed the mobilizing of these reserves into privately controlled banks in Chicago and New York are so great that it staggers imagination. It has resulted in furnishing available cash for organizing all of the big trusts of the country with their tremendous load of watered stocks, and the thousands of smaller combinations that have been whipped into shape by promoters. The trust bankers simply use the people's money to handle temporarily the organization and then pass the stock on to others full of water, and the people must pay the interest on them forever through increased prices.

The trust banker takes out his commission of from 1 to 50 per cent for using the bank's influence and the people's money to work the confidence game on the country. J. Pierpont Morgan organized the Steel Trust and wrote into its capital $700,000,000 of water with a stroke of the pen, and passed the stock that did not cost a cent on to the people, and every man who uses steel must pay the tribute interest as long as the Steel Trust makes steel. For this trifling service, performed with other people's money intrusted to his keeping, he charges a small commission of $66,000,000. There are shallow-pated, unthinking people who fawn at the feet of men who have used these great privileges to lay the toiling millions under a load of debt forever, but, for me, I consider them the greatest criminals of the age J. Pierpont Morgan was the greatest trust organizer in his time, and the amount of watered stock he has loaded upon the American people through industrial organizations he has floated with the people's money intrusted to his care is beyond human conception. It would take the entire net earnings of all the people and all the industries of my State a whole year to pay for the watered stock in the Steel Trust alone. His commissions on that deal would run the State government of Nebraska for many years.

I am not quarreling with the promotion of large industries on legitimate capital, but I complain of the wholesale robbery that has been legalized and looked upon by some men as honest practice indulged in by these guardians of the money of the people which has been made possible, to a large extent, by our national-bank laws covering the item of bank reserves.

HOW TO PREVENT USE OF RESERVES FOR SPECULATION.

Now, the question is, How are we to prevent this sort of use of the people's legal bank reserves by the enactment of the Glass-Owen bill? We can prevent absolutely the pyramiding of the legal reserves of the Nation in New York banks under private control, where they can be used for stock-gambling and stock-watering purposes, to the very great loss of the whole Nation. It is true, however, after we have done this, the banks of New York are still rich beyond the dreams of Cresus.

For the last 15 years they have been waxing fat on the tolls they have taken from commerce and through high financing. They have transferred from the people's credit to their own credit millions upon millions of the people's capital every year. They neither spin nor weave, therefore produce no wealth. They simply feed upon those who do produce it by controlling the vast credits of the country for their own benefit. Therefore New York will go on collecting her tribute upon the Nation's commerce, but her power will be lessened by a few hundred millions of legal bank reserves which the Glass-Owen bill will take from her control. New York City is an economic waste to the Nation. Through the haphazard method of permitting commerce to take its own course, without regard to cost or consequences, we find many railroads and steamship lines centering in that city, forcing to the highest point the cost of handling commerce. Building lots selling at the rate of $25,000,000 an acre, skyscrapers built at an enormous cost, tunnels under the great Hudson River in many places, subways blasted out through the length of Manhattan to expedite traffic—all this is done at a cost of untold millions of money, every dollar of which is collected in tolls from the commerce of the Nation that clears there and from the profits of stock watering and gambling. Four million people are congested on a rock-bound island in the Hudson River, the most impractical and expensive place possible to locate a city. The cost of conducting business there is not only inordinately great, but the evils arising from the congestion of population make the city a great ulcer on the body politic. It is fast becoming a menace to the peace and welfare of the Republic in more ways than one. The day, no doubt, will come when the Government will have to direct the movement of commerce in order to prevent the overdevelopment of great cities. Great cities are to nations what a tumor is to a human body. We may have to cut them out some day to save the life of the Nation.

PROVISIONS OF THE GLASS-OWEN BILL.

The Glass-Owen bill simply proposes to take the legal reserves of all the national banks—or, rather, that portion which they are not required to keep in their own vaults—and place them in 12 large Federal reserve banks, located in 12 different sections of the United States. These Federal reserve banks will be organized by the national banks of each section, each bank being a member or stockholder. These Federal reserve banks will be supervised and controlled by the Government of the United States through a Federal reserve board of seven members appointed by the President. The relationship of the Government to the banking business is simply a supervisory control, while the actual banking business is done by the Federal banks.

The bill provides that these Federal reserve banks will do business only with the member banks and the National Government. The member banks put up $105,000,000 of the capital of the Federal reserve banks and keep a portion of their legal reserves on deposit with them, amounting to several hundred million dollars more. The Treasurer of the United States will keep the deposits of the Government in these banks also, so that the total assets of the 12 banks will reach nearly a billion dollars when the system is in complete operation. As a compensation to the Government for the part it takes in the operation of the Federal banks it will receive 60 per cent of the profits, after 5 per cent has been paid to the member banks on their capital stock, 40 per cent going to the member banks.

This vast banking capital will be used exclusively in rediscounting commercial paper arising out of agricultural, commercial, and industrial transactions upon which member banks may wish to borrow money for use of their customers. Not a dollar of it can be loaned for gambling on the stock exchanges or for wildcat speculations, a kind of banking transaction that seems to be popular in large centers like Chicago and New York. We are assured through the provisions of this bill that every dollar of these reserves will be used as a basis of credit to the great business of production and distribution of the necessities of life. Every section of the country will have the use of these reserves in proportion to its capital and needs. The reserves of a district are mobilized into the Federal bank of that district for the use of its member banks. If a money stringency occurs anywhere in the district, instead of the banks of that locality standing alone against the storm, as they are compelled to do under our present law, the banks in trouble can call on the Federal bank for aid and get it at once, without any question, upon the presentation of good, bankable notes guaranteed by the banks holding them. Every banker doing a legitimate and safe business will have in his vaults paper suitable for rediscount to an amount beyond his possible needs under any condition that may arise. If he has not, his bank is insolvent, anyway, and ought to be closed up for the public safety. Thus it will be seen that nothing but a country-wide disaster such as we have never known could possibly produce a country-wide panic like the one we experienced in 1907. A panic like the one in 1907 could not possibly have developed under the provisions of this Glass-Owen bill, because the money needed to allay the stringency could have been supplied at once, before the trouble was handed on to other banks and ultimately to every hamlet in the United States.

Under the new law the legal reserves of the banks of the New York district would have been mobilized in the Federal bank, ready for use at a moment's notice, and the panic would have been nipped in the bud at its incipiency. It could not have even started, the need of cash would have been supplied so quickly. After the country was well-nigh ruined by its ravages the Secretary of the Treasury of the United States stepped in and calmed the tempest with $25,000,000 deposit of the people's money. If it should happen that the financial stress was so deeply rooted that the Federal reserve bank can not allay the trouble, the Federal reserve board can order another Federal bank to the aid of the first one, and if that is not sufficient, still another and another till the whole battery of 12 Federal banks are brought into action with the greatest aggregation of banking capital back of them in all the world. If this would not stop a panic, then nothing known to banking science would. But in the judgment of experienced men nothing but the rankest dishonesty of member banks in their management or a nation-wide calamity could produce a panic that these great Federal banks could not snuff out at once before it could be called a panic.

REDISCOUNTING PROVISIONS.

In ordinary times the Federal banks will do a regular rediscount business with their member banks, furnishing each section of the country ready money for crop-moving and other purposes. The modus operandi is something like this: A country banker finds, for instance, he needs $50,000 for crop-moving purposes, and he has already loaned up to the limit of his reserves. He takes $50,000 worth of notes which the bank indorses and sends them to the Federal bank for rediscount. Under this law the Federal bank is empowered to issue Treasury notes under the approval of the Federal reserve board, and will in all probability issue these Treasury notes for rediscounting paper from a member bank instead of using lawful money—unless specifically called for—which is needed for reserve purposes. If Treasury notes are issued to the member bank, the $50,000 worth of customers' notes will be placed in the vaults and $50,000 worth of Treasury notes—new money—issued to the member bank. The member bank pays them out in the course of crop moving and they pass as do national-bank notes, but they are not lawful money and can not be used by the member bank as reserves. Since the loaning power of the member bank depends on the amount of lawful money held as reserves, it is apparent it would want to get these Treasury notes back to the Federal bank as soon as the need of them passed away, because they are a liability, and reduce the member bank's power to extend credit to the exact amount of these notes it holds in its vaults. Thus, while these notes will pass everywhere in the hands of the people just as national-bank notes do, they are a liability in the hands of the bank, because no matter how many of them a bank holds the bank's power to loan money would not be increased one penny as a result. They are not lawful money, and a bank must have lawful money in its vaults upon which to make loans. Therefore, every bank that gets hold of these Treasury notes sends them back to the Federal bank for redemption as soon as the need for them passes. Thus we have an elastic currency.

When the Federal bank issues these Treasury notes it must segregate in its vaults a reserve of 33⅓ per cent of lawful money for the purpose of redeeming them as fast as presented. The notes therefore have as a security for redemption the $50,000 of customers' notes, which the member bank guaranteed, and a reserve fund of $16,666⅔ of gold or lawful money, and the credit of the United States besides. There is no better money than this in existence, as it is based on actual commercial transaction and passes out of circulation with the close of the transaction. It is elastic, a quality so much needed in our currency.

The Glass-Owen bill will, if enacted into law in its present form, prevent panics. It will guarantee that every section of the United States will have its share of benefit from the legal reserves. It guarantees ample money to do the country's business with dispatch and economy. It provides against a shrinkage of property value as the result of a shortage of money and against inflation of prices from a superfluity of money. In short, it is the most important piece of legislation proposed by Congress in the last 50 years, and it is to be deplored that we have not had such a law from the beginning and thus saved to the producers untold wealth which they have been swindled out of by recurring money panics.

Banking and Currency.

EXTENSION OF REMARKS

OF

HON. LOUIS FITZHENRY,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, September 17, 1913,

On the bill (H. R. 7837) to provide for the establishment of Federal reserve banks, for furnishing an elastic currency, affording means of rediscounting commercial paper, and to establish a more effective supervision of banking in the United States, and for other purposes.

Mr. FITZHENRY. Mr. Speaker, as diversified as are the opinions of those who represent the various political parties in this body as to the merits of the pending measure, all minds are in harmony upon one proposition—that the present banking and currency laws are inadequate, defective, and a constant menace to the prosperity of our people and the stability of our institutions. Indeed, the differences of opinion are more fanciful than real, more speculative than substantial. Our Progressive friends complain that we have not gone far enough, while our Republican associates, more in a spirit of envy than legitimate criticism, say that in writing this bill we have gone too far; but neither the gentleman from Kansas [Mr. MURDOCK] nor my colleague from Illinois [Mr. MANN] have been able to point to one material provision which has escaped a serious, sound, and sensible consideration. The Progressive leader [Mr. MURDOCK] would have this House cure all of the ills of the body politic in this one measure. He is not content that we should single out the more serious ones and cure them one at a time, while the Republicans have no substitute to offer.

Were it necessary to procure evidence of the insufficiency of the present system of banking and currency, I would call to witness the great Monetary Commission which sat at Indianapolis 15 years ago and called the attention of Congress and the people to the crying need of legislation of this character. Every national convention of every political party has pledged itself to the passage of laws which would give us a sound banking and an elastic currency system that would meet the demands of the business of the country. Conventions of representatives of the banking associations have repeatedly called the attention of Congress to the necessity of amending our laws so that our bankers could cope with the emergencies which were likely to happen at any time.

Political capital was made of the panic of 1893, and so successfully that many well-meaning and ordinarily well-informed people believed that it was caused by a tariff bill which was to be passed at some time in the future and which was finally passed a year and a half later. Political exigencies required that the real cause of the panic of 1893 be hidden from view; and, unfortunately for the American people, it was. That panic followed closely upon the passage of the McKinley law, which granted special privileges liberally to a favored few of our people. It was when beneficiaries of those special privileges began to finance them that our system broke down completely, prostrating the industries and paralyzing the markets of the country.

RANKING PANIC OF 1907.

After the panic of 1893 the country finally settled down to business again and things ran along smoothly. Many improvements in agricultural methods were made and production of labor in all lines was increased. The factories were humming along joyously, and their output was immense; the farms of the country brought forth their most bounteous crops; the bank vaults of the country were supposedly full of money; and, in fact, so far as surface indications went, all were enjoying peace, prosperity, and plenty. The Nation was apparently at the ideal stage in its history.

This was our condition when our banking system broke down completely again without a moment's warning and to all intents and purposes without the slightest provocation. National banks suspended payment, mills closed down, factories went to the wall, soup houses and bread lines were established to feed the unemployed. The banking and currency panic of 1907 was on with all of its costly and terrible consequences, and this at a time when there was more money in the country than ever before; more agricultural products to be sold and transported to market than at any previous time in years; business to be done, but no money available with which to do it; the last presidential election three years in the past and the next one a year in the future, with the incidental unrest not yet started and the Republican Party in absolute control of both Houses of the Congress and a Republican occupying the White House.

ILLINOIS FARMERS WILL NOT SOON FORGET.

The bronzed, industrious farmer of the great corn belt in Illinois will not soon forget the consequences of the fall of 1907. With his bounteous crop ready for market and contracted for delivery, he found it an impossibility to get his money, because the grain buyer had none with which to pay him. Had he been especially diligent, marketed his crop early, gotten his money and deposited it in the bank, he discovered he was unable to draw it out to pay his debts. He and all others found themselves the victims of the twin evils of speculation and currency concentration—the children of set banking and currency laws, passed as a war measure—the shackles of an industrious and frugal people.

Upon former occasions these money panics had taken place at times when it was easy to mislead men not especially well versed upon the subject into a belief that they were caused by some other combinations of circumstances. Not so this time. With nothing, other than prosperity itself, with which to confound it, and like a bolt of lightning out of a clear sky came the banking and currency panic of 1907 with all its dreadful consequences. It is almost unnecessary to state the particular features of that law which made that disaster possible, were

it not proper to seek out the particular evils of present laws for the purpose of correcting them.

EVILS OF PRESENT SYSTEM.

It is unnecessary to detail all of the evils of the present system, but everybody skilled in matters of finance admits that—

(1) Our present system of currency is neither elastic nor mobile, while a proper system should be elastic—that is, expanding and contracting readily to meet the needs of the business of the country—and movable, easily and quickly, from where it is not needed to where it is needed.

(2) Our present system of currency naturally and almost necessarily tends to concentration in the great banks of New York City.

(3) It encourages speculation and hazards the banking reserves of the country upon the turn of the markets.

(4) The funds of the Government are gathered together and stored in the United States Treasury and the subtreasuries, located in the different parts of the country, and are thereby actually removed from circulation. These funds are of no more benefit to the business of the country than though they did not exist. At the close of business on the 16th of September, 1913, this sum amounted to $286,129,330.

(5) We have no system of banks or branches of banks in any foreign country, which has always been an embarrassment to our trade and which makes us, in a measure, the financial subjects of Great Britain.

The exports of the United States for the fiscal year ended June 30, 1913, amounted to almost two and one-half billion dollars. All of this business, done by American merchants and producers, was done through foreign banks, principally the banks of London. We have been endeavoring for many years, at great expense to the people of this country, to encourage friendly relations with the South American Republics. Our business interests have increased their trade with South America very considerably, but notwithstanding the growth we get less of the South American trade than England or Germany.

In 1912 our export business to South America amounted to $115,000,000. All of the banking business incident to this volume of trade with South America was necessarily done through the banks of London. Conceive, if you will, the embarrassment of our position—while endeavoring to gain the good will and the trade of South America, Great Britain controls the finances of the two continents, so far as international trade between North and South America is concerned.

(6) The present law is a panic breeder and enables a handful of men in New York City to dominate the commercial interests of the Nation.

(7) The present system affords absolutely no savings bank facilities and prohibits the national banks from making loans upon real estate, the best security which the Omnipotent has given us.

THE ISSUE IS PLAIN.

It is known that the panics of American history have been due to the fact that our currency system was based upon an arbitrary fact—the bonded indebtedness of the Nation—which has no relation in the world to the commercial needs of the people, and under existing laws it is possible for the big banks of New York to gather the reserves of the country banks into their vaults and loan them out for use in gambling in stocks and bonds on Wall Street. This latter specification—the possession of the national purse—together with the inelastic character of our currency, have given to the so-called Money Trust the power to completely dominate the banking business of the country and, through this domination, the positive control of the prosperity and destiny of ninety millions of American souls. Is this not more power than should be put in the hands of any set of individuals for their own private use? It certainly is. When, by the very nature of the situation, we are brought face to face with the proposition that either the banks are to control the Government and the people, or the people, through their Government, must control the banks, the issue is so plain and simple that our duty is unmistakable. Ninety-nine per cent of the opposition to this bill is due to the agitation of clever, crafty representatives of the big banking interests in the central reserve cities, who see in this proposed legislation the control of a great people slipping from their grasp. I might add that the other 1 per cent of opposition is due to a lack of careful consideration of the bill and the reasonable and natural consequences of its provisions.

THE FEDERAL RESERVE BOARD.

The instrument provided in this bill which is to control the national banking system for the people and in the interest of the people is the Federal reserve board. This body will sit in Washington, and the tremendous power of the Money Trust will be transferred from the gilded halls of Wall Street, where it is now used for private profit, to the Capital of the Nation, where it will be wielded by a governmental agency for the public good. As at present provided in this bill, this public agency will be composed of seven members, three of them by virtue of their offices—the Secretary of the Treasury, the Secretary of Agriculture, and the Comptroller of the Currency. The other four are to be appointed by the President of the United States directly to this service, by and with the advice and consent of the Senate.

The Secretary of the Treasury is the direct custodian of the material wealth of the Government and the processes of redemption which make every dollar of our money as good as every other dollar and all as good as gold. Is it not proper that this Cabinet officer should be a member?

The Secretary of Agriculture is the direct representative of the great basic industry of the Nation and those who pursue it, and the Cabinet representative of those who feed and clothe our people and many others among the nations of the earth. Is it not eminently proper that the official representative of the greatest producing class we have should be a member of this important board?

The Comptroller of the Currency, the officer of the Government charged directly, even to a higher degree than any other officer, with the administration of our banking and currency laws, certainly should be given a place in the councils of this great public agency. Is it not wise that he should be a member ex officio?

For the four appointive members of the board the bill provides such limitations upon their selection by the President that it insures an able, nonpartisan, well-balanced instrumentality.

Not more than one can be from a Federal reserve district.

The President is required to have a due regard to a fair representation of different geographical divisions of the country.

They shall devote their time to the business of the board.

Not more than two of them shall be of the same political party.

At least one shall be a person experienced in banking.

No member can be either an officer or director of any bank.

These are a few of the precautions that the law provides to insure the selection by the President of a board that will administer the duties of these exceedingly important offices. But the bill does not stop there. Another and independent agency is provided, which has powers and duties and is privileged to know that this board is performing its duties and exercising its great powers fairly and in the interest of all the people. This additional agency is—

THE FEDERAL ADVISORY COUNCIL,

which is composed of one member elected by the members of the boards of directors of each of the Federal reserve banks. The bill very wisely authorizes the Federal advisory council (1) to meet and confer directly with the Federal reserve board on general business conditions, (2) to make representations concerning matters within the jurisdiction of the board, (3) to call for complete information and to make representations in regard to the business of the board and business of the country.

In other words, the Federal advisory council has a right to know just what is being done and why and how; also why certain things are not done. Had some legally constituted authority possessed this power over the coterie of bankers who precipitated and directed the panic of 1907, there would have been no panic, and the prosperity of the country would not have been so needlessly interrupted and so much suffering entailed.

A COMPARISON.

The Federal reserve board is said to be the "capstone" of this new and very effective, I believe, bureau for the administration of the national banking system in the interest of the people of the country. It is given ample power to manage the banking business of the country, and to doubt its efficiency is to question our form of government. Compare, if you will, this governmental agency with the self-constituted board of control in New York, which for a quarter of a century has wrecked railroads, destroyed great industries, created panics, closed banks, ruined trust companies, floated watered stocks and inflated bonds upon the great utilities of the country—which are, in turn, but burdens upon the people served by these great quasi public agencies—corrupted the fountains of liberty, and limited the God-given opportunities of a race of people. Yet those who have wielded this great power object to the creation of this board unless the law requires the unanimous consent of all its members to act, and that they be given "minority representation" on the board. Suppose the railroads had minority representation upon the Interstate Commerce Commission. In other words, the big bankers of the country have no objection to the board if Congress will but let them run it.

THE FEDERAL RESERVE BANKS.

Having considered the great administrative agency created by this measure for the control and regulation of the national banking system, let us discuss for a moment the machinery through which the board will work. The country will be divided geographically into not less than 12 Federal reserve districts, having due regard for the established lines of business, and in each of these districts will be located, at some central point, a Federal reserve bank, which shall be owned by all of the banks in the district, called member banks. All national banks are required to become members by qualifying under the law and by-laws of the Federal reserve board. Each reserve bank is managed by a board of directors of nine, three to be chosen as representative of the member banks, three who are representative of the public in the district served, and all six of whom shall be elected by the member banks. The other three members of the board of directors shall be appointed by the Federal reserve board, who shall designate one of its appointees to be chairman of the board. The Federal reserve board is also given the power to remove the three directors elected by the member banks as representative of the general public if in the opinion of the board these directors are not fairly representative of the agricultural, industrial, and commercial interests of the district.

The purpose of these reserve banks is to compel national banks and to permit State banks to place themselves in a position where they are entitled to the benefits and their patrons furnished the conveniences afforded. These Federal reserve banks are the instruments through which the Government will put currency in circulation among the people and regulate, so far as practicable, the diffusion of credits.

If a member bank has all of its available funds loaned out, and the needs of the community require additional currency with which to transact the business, the member bank may take such portion of its prime securities as it desires to the Federal reserve bank and have them rediscounted. The securities are accepted by the reserve bank and held for collection, and in payment of them the reserve bank issues to the member bank the Government's Federal reserve notes, which the member bank issues and uses the same as money. As the securities are paid off and the emergency exhausted, the Federal reserve notes find their way back to the bank of issue and are retired until another emergency arises. Thus, the proposed bill provides an emergency currency system which expands automatically when the emergency appears and contracts automatically when the emergency is passed without an undue inflation or a dangerous contraction, the volume of emergency currency in circulation depending entirely upon the needs of commerce, and not upon some arbitrary fact which has no relation whatever to the business needs of the country, as at the present time. The present system is entirely satisfactory when the business of the country is running along smoothly—indeed, any kind of a system would do as well; but when the extraordinary condition, the emergency, comes, it breaks down utterly, as it has always done in all panicky times.

I believe, Mr. Speaker, that this measure might truthfully be called "a bill to prevent panics."

FARM LOANS.

For the first time in a half century, if this bill becomes a law, national banks will have the right and power to make loans to their customers upon real estate security. Heretofore the national bank has, strictly speaking, been required to do a commercial banking business, as distinguished from an investment or capital loaning business, which has been done by the savings and trust banks organized under the State laws. To meet this growing branch of the banking business, national banks have found it necessary and proper to organize, through their stockholders or directors, State trust and savings banks, which could engage in the business of accumulating small savings of time deposits and loaning them out upon the security of farm mortgages and trust deeds.

The pending measure authorizes national banks to create under their Federal charters savings-bank departments, subject to proper limitations and regulations. When a department is thus properly organized its powers are almost unlimited in that particular class of banking, and loans may be made for long terms and renewed. Should a national bank for any good reason decide not to set by a portion of its assets for the organization of a savings-bank department, then this law gives the bank the right, even while doing a purely commercial banking business, to make loans on real estate for a period of not longer than one year.

Those familiar with the manner in which farm loans are made are at first inclined to feel that the loaning power for the period of one year is of little value; but when we consider that for many years national banks have been furnishing funds for large real estate transactions, with no security other than personal security upon promissory notes, it must be apparent that this grant of power will be very valuable to the bank, adding to the integrity of its short loans for closing up real estate transactions and a great accommodation to the patrons of the bank.

This provision of the bill, if enacted into law, will add materially to the efficiency of the national banking system. It will cause national banks in many instances which now, through their stockholders or directors, control a State-bank corporation to abandon the State charters and bring their entire business within the provisions and the regulation of the Federal system. It will also have a tendency to encourage strictly State banks to come into the Federal system and receive the immense benefits of the rediscounting privileges of the Federal reserve bank, thus insuring in a measure the safety of the deposits of our people.

A FALSE CRY.

When the enemies of this measure found themselves unable to seriously criticize any material provision in this bill they resorted to the false cry that the present majority in the House of Representatives was attempting to surreptitiously destroy the present standard of value of our financial system. This contention is purely malicious and wholly without foundation, for not one word in the bill, from its enacting clause to the last word in the last section, even refers to a change of the established standards of value of this country. It may be that some day it will prove wise to change the present standard of money in the United States, but it would be unwise to do so at the present time, and neither the Banking and Currency Committee nor any Member of the House has even thought of such action.

FEDERAL RESERVE NOTES.

The only change in the currency that is proposed by this measure is to retire the Government 2 per cent bonds, which are now the basis of the circulation of bank notes, at the rate of 5 per cent annually, and incidentally the national-bank notes, and in their stead and subject to the quality of elasticity provided for in this bill, substitute the Federal reserve bank note. In all of the discussions of this measure, both during the general debate and under the five-minute rule, no Member of this body has presumed to question the soundness of the Federal reserve bank note provided in this bill. When the banker has all of his funds loaned out and an emergency arises requiring more money he takes his prime securities to the Federal reserve bank, where they are rediscounted and the banker given in payment for his securities these Federal reserve notes, which are a legal tender for the payment of all imposts, excises, and Government dues. A Federal reserve bank is required to have in its vaults as security for these Federal notes at least 33⅓ per cent of their par value in gold coin, as well as the par value of the notes evidenced by the prime securities of the member bank which had them discounted. When these securities are transferred they are indorsed by the member bank, so that behind every Federal reserve bank note that can be issued under this law the holder of the bank note will have as security for its payment one-third of the par value in gold, 100 per cent actual prime securities, the entire assets of the member bank discounting its securities, the entire assets of the Federal reserve bank issuing the notes, and, in addition, the taxing power of the United States Government.

Bank notes are not money. They are evidences of credit and promises to pay lawful money. In other words, they are a substitute for money. Each dollar of actual money in this country is required to do about $8 worth of business. It has to assist it in the performance of its work all sorts of substitutes for money and all kinds of means for the transfer of credits, such as the bank check, the promissory note, and bank notes of various kinds. But to my mind the substitute for real money provided for in this act and alluded to as Federal reserve bank notes is such a perfect substitute that it is as near real money as it can possibly be without being made and declared actual money.

ADMINISTRATION OF THE LAW.

The general administration of national banks under the present law is not substantially changed, except the bank reserves are cared for in such a way that the reserves required to be held by national banks can not be accumulated and transferred to the great financial metropolis of the United States for improper use, but must be held in the Federal reserve district in which they belong. It is true the law requires national

banks to subscribe for capital stock in the Federal reserve bank to the extent of 10 per cent of its capital stock, subject to an additional call of 10 per cent. But, on the other hand, the banks will be relieved of the necessity of buying not less than $25,000 worth of 2 per cent Government bonds before they can engage in the banking business.

RELIEF AND SECURITY.

Under this law the farmers of Illinois will be able to market their crops without the aid of a special dispensation from the great financiers of New York. And after they have marketed their crops and placed their money in their local national banks, there never will be any question about their ability to draw it out any time they desire to do so, because under this law the local banker will have the money to pay the depositor or he will have the means of procuring money from his Federal reserve bank with which to pay his depositor upon demand. The savings of the merchant, manufacturer, farmer, and the workingman will not be loaned by local bankers to the New York bankers for gambling purposes. In fact, the Federal reserve bank is absolutely prohibited from rediscounting any paper the purpose of which is to enable the holder to deal in or hold stocks or bonds or other similar security for speculating purposes. The concentration of the wealth of this great Nation into the coffers of one city has created a power which threatens the destruction of the liberties of the American people unless removed. This bill decentralizes the wealth of the Nation. That is why the big bankers and banking syndicates of our great metropolis so strenuously oppose the provisions which this law contains.

Banking and Currency.

EXTENSION OF REMARKS

OF

HON. WILLIAM A. CULLOP,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, September 17, 1913,

On the bill (H. R. 7837) to provide for the establishment of Federal reserve banks, for furnishing an elastic currency, affording means of rediscounting commercial paper, and to establish a more effective supervision of banking in the United States, and for other purposes.

Mr. CULLOP. Mr. Speaker, prior to the Money Trust investigation conducted by the Pujo committee in the last Congress the people were not fully apprised of the defects in our banking and currency system, and but little understood the immense power exercised by a few men who practically controlled the money of the entire country. That investigation made manifest the absolute necessity for a revision and reformation of our banking and currency laws. It exposed the abuse of power exercised by a few men under the existing system and the necessity for legislation regulating the issue and distribution of the circulating medium of the country. It revolutionized public sentiment on this important question and awakened the people to a realization of the fact that for the good of the common welfare of this Republic reformation of our financial system was an imperative necessity in order that the industrial commerce of the greatest country on earth might be conducted fairly and freely and that business disasters might be averted. They knew that under the present system within the last 30 years six panics have occurred, producing financial disaster, bankruptcy, distress, and ruin, but they had never been able to successfully diagnose the cause or satisfactorily fix the responsibility other than to believe something was wrong with our financial system or its administration.

Previous to the Money Trust investigation the people did not realize how helpless they were in the hands of a few financial "kings" operating in Wall Street, who from avarice, greed, or selfishness were able to dictate the business policy of the whole country and manipulate it as their personal interests might require.

Financially powerful enough to make a panic if they desired or prosperity if they wished.

Because of the defects in the existing system which the investigation disclosed to the world the people learned why it was that financial text-book writers of Europe denounced our system as "barbarous" and pointed to it as the "poorest of all the great financial countries of the world."

President Wilson, desiring to serve the whole people to the best advantage, in his message to Congress on this subject, wisely said:

We must have a currency, not rigid as now, but readily, elastically responsive to sound credit, the expanding and contracting credits of everyday transactions, the normal ebb and flow of personal and corporate dealings.

Our banking laws must mobilize reserves, must not permit the concentration anywhere in a few hands of the monetary resources of the country or their use for speculative purposes in such volume as to hinder or impede or stand in the way of other more legitimate, more fruitful uses. And the control of the system of banking and of issue which our new laws are to set up must be public, not private, must be vested in the Government itself, so that the banks may be the instruments, not the masters, of business and of individual enterprise and initiative.

This clearly and concisely states the object of the proposed measure and the noble purpose which prompts this legislation. Banks should be the instrument and not the masters of the public, the instrument for conducting and expanding legitimate enterprise, and not for curtailing or paralyzing it; the instrument for encouraging development of all healthful business, and not for dwarfing or strangling it; the instrument for inspiring competition in all industrial affairs and not preventing it. To this worthy purpose it is wisely directed in order that our incomparable facilities may be developed and utilized for the benefit of the whole people and the advancement of our great commercial opportunities, to the end of maintaining a permanent prosperity.

Critics have assailed this measure most severely because it lodges the control of our currency in a Federal reserve board of seven men, but this objection can not prevail, because under the present system it is lodged in only one man—the Secretary of the Treasury—operating through the Comptroller of the Currency. He is clothed with this power now and can exercise it practically as he pleases.

"In a multitude of counsel there is wisdom," and who is there that would not prefer this great power in the hands of seven men composed of different political faiths, coming from seven different sections of the country, acquainted with the diversified business requirements, than to have it lodged in the hands of one man vested with authority to arbitrarily use it as he desires? Of course every candid person would prefer it to be in the hands of seven men to assure a fair and just exercise of the same. Again, every fair-minded man in this Republic would prefer this power to be vested in seven men selected from different parts of the country than to have it remain in the hands of the five managers of the New York clearing house, where practically the control of our money now is, who represent the 51 banks of New York City which compose the New York clearing house and which completely dominates the money and credits of this great Republic. It will destroy their arbitrary power and break down their ability to dictate our entire industrial and commercial affairs. To this self-constituted and unauthorized organization and its unchallenged power it deals a deadly blow in order to secure for us industrial and commercial freedom. They assail it, and well they should, for it will end their tyranny over the business of the people of this Republic.

It is criticized because some assert it is placing the financial system of this country in politics because the President appoints the Federal reserve board, but under the present law the President appoints the Secretary of the Treasury and the Comptroller of the Currency, both of whom are partisans and who have complete control under the present system. This measure provides that of the four members appointed on this board, outside of the official membership, not more than two shall be of one political party, and that not more than one shall be from the same regional reserve. Can critics on this ground justify their assault? If so, how?

Does not this provision assure the fair and nonpartisan administration of this important function of our Government, the one nearer to and more important than any other to the people? Is it not more preferable than the existing method?

The burning ambition of every man who has been or will be President is fame. This one thing he cherishes above all others and knows it depends upon the success of his administration. If his administration is a business failure, if it is attended with business prostration or panic, it will be condemned by the people. If it is attended with prosperity, it will receive their commendation. One of the great responsibilities resting upon him will be to see that this department is administered so as to enhance his glory by advancing the prosperity of the country. I venture the assertion here and now that every man in the country would prefer this responsibility be placed in the hands of any Chief Executive this country has ever had or ever will have than to remain in the hands of the managers of the New York Clearing House Association, where it now practically is and where it will remain as long as the existing system continues.

The President would have it administered in the interests of the whole people, while the latter would control it in the interest of themselves and their associates; the former from patriotic motives and the latter for selfish purposes; one for the good of the country, the other for private gain.

Another criticism of the measure is that it takes the control of private business out of the hands of its owners and places the same under Government control. This objection is based on the fallacious assumption that the national banks are private institutions and in their management and operation the public have no concern. Any business in order to organize which requires a charter from a national, State, or municipal government is not a private business, but a quasi public one, and the public has the unquestioned right to regulate, supervise, and control it. The banking business is such a business, and the public therefore has the power to regulate it in order that it may better serve the public convenience and promote the general welfare. This opposition was urged to the establishment of the Interstate Commerce Commission, to the enactment of railroad legislation, telegraph and telephone supervision, and pure-food laws, and yet the courts upheld this right wherever it was controverted and fully and firmly established both the duty and power of Congress to regulate, supervise, and control the same. It is one of the vested powers delegated to Congress by the Constitution. Who now would be bold and audacious enough to advocate a repeal of the above-enumerated legislation? The opposition to them has faded away and the public with one accord concedes their wisdom and from year to year appeals to Congress to strengthen and extend the regulation and secure more and better opportunities.

Mr. Speaker, so it will be with this legislation when once in operation; when the people see its beneficial results they will approve and ask its extension. It places the banks and the currency of the country under Government control, where they belong. Its inception was to secure such supervision, and this is its best feature; it is created for that purpose and will be executed with that object in view. The Government fairly administered is a better guardian of any person or business than any private or industrial corporation. The Government has no selfish interest to serve, no greed to satisfy, and no avarice to appease; the latter has all to dominate and control it.

Under our Constitution Congress alone has the power to coin and issue money. This power can not and should not be delegated to corporations or individuals. Any attempt to delegate this power is a perversion of constitutional authority and an invasion of constitutional limitations. The Government should issue the money and should not transfer this function to any private institution or individual, in order that full faith and credit be sustained and no undue advantage be given one class of citizens over another.

If this measure places our finances under political control, then they have been, under the existing system, under political control for the past 50 years, for there is not a single administrative feature in this measure but what is contained in the present system in a more arbitrary form and which could be exercised in a more tyrannical manner.

Another criticism upon which its opponents lay great stress is that it will enable the large banks to oppress and tyrannize over the small banks of the country. This objection is absolutely without foundation. Just the reverse is nearer the truth. By the provisions of the measure the country is divided into 12 regional reserves, and each of these have a regional reserve board elected by the banks constituting the regional reserve, each member bank having but one vote. As the small banks outnumber the large banks by an enormous majority, as the report of the Comptroller of the Currency shows, the small banks can control the regional reserve board, if they desire to do so, in every reserve region in the United States. Then how could the large banks oppress and dominate the small banks? It would seem this objection was raised solely by the large banks in order to arouse the opposition of the small banks to defeat the measure, but the small banker will read and think for himself, and he will readily see and comprehend how baseless this criticism is and what are the advantages furnished by this measure for him to be emancipated from the domination of the large banks. He will understand it furnishes the means and points the way to his freedom and financial independence.

It has been criticized because it establishes 12 regional reserve banks instead of 1 as provided by the Aldrich plan. Those who urge this objection will feel its effects. They constitute the little coterie who manipulate the Money Trust. It strikes a fatal blow to their domination of the financial and industrial affairs of this great Nation. From their manipulations this country has suffered long enough; markets have gone up and down at their dictation, business fell prostrate when they directed, and development stood still or was active, as they desired. With a central bank such as the Aldrich plan proposed, their lease of power was assured, and their exploitation of the public was continued. We are not surprised at their criticism, opposition, and protestations. The 12 regional reserve banks are prescribed in order to prevent control by a few of our circulating medium, in order that it may not be turned from legitimate pursuits to stock-gambling purposes; that it may be retained in the communities that own it and available when they need it to move the crops, work the mines, operate the factories, assist mercantile businesses in the dull season, and develop the resources which abound in all these regions. This feature is the most commendable of all. It will enable the real producers of wealth to have the means to carry on the legitimate enterprises with which the people are identified and in which the welfare of the country is deeply interested. It will manacle the paralyzing hand of the panic maker and silence the voice of the calamity howler. Write in this bill a provision for one central bank located here in the city of Washington and the criticism of these men will disappear and their approval will supplant it. They conceal their real objections and put forward ostensible ones, hoping to create opposition. They mourn the loss of the opportunity they would like for it to confer, but they may as well understand now that the Executive and the Congress as now constituted represent the people of this country and not the special interests; laws now are written by the representatives of the people and not alone by the beneficiaries of them as heretofore. Too long, yes, much too long, has this been the case in this country, and the people have determined it shall cease. A new order has been proclaimed in this Republic, an order that the people shall rule and not the special interests, and the President and Congress have been commissioned by the people to execute this order, which they propose to do both in spirit and in letter.

We see a splendid example of this order of things in the passage of the new tariff bill, the first in 50 years that has been written by the people's representatives elected for that purpose. Others heretofore have been written by the protected industries, the beneficiaries of the legislation, and who have for this reason garnered golden harvests.

But, Mr. Speaker, it is amusing to see men criticizing provisions in this bill which they commend in the Aldrich currency plan. Every one of the above I have discussed were contained in a more arbitrary form in that bill, and these same critics, who are objecting so strenuously now, indorsed them in that measure. If they were acceptable in their arbitrary character in that bill, entitled to their indorsement and approval, why are they in a modified form here so obnoxious? Ah, Mr. Speaker, it is because this bill does not establish a central bank, because the ability to dominate the money supply of the country is safely provided against, because their opportunity for stock gambling is broken up, because they can not at will divert the money of the country under its provisions from the legitimate channels of trade. Their opportunity to paralyze business, shut down industries, prevent competition, and dominate the finances of the country is safely and securely guarded against and practically prohibited. It sounds the death knell of the Money Trust, ends high financing, and is a body blow at monopoly. These constitute the real reasons for their opposition, and because of this fact the people will like it the better on account of the enemies it has made.

I have in my way pointed out and answered some of the objections its critics have made against the measure. There are a few others sometimes urged which I have not the time to answer and would not trespass upon the patience of the House if I had the time to spare. However, it is proper to say in reference to them that they are baseless, as an examination will show to the most casual observer.

Mr. Speaker, a few have come out in the open during this debate and offered a defense of the existing system—only a very few—because it is almost universally discredited and roundly condemned everywhere. It was initiated in an emergency, made necessary as a war measure when the Nation was in the throes of a terrible Civil War which threatened the existence of the Republic. Its usefulness passed long ago, as well as the occasion for its adoption. Why the American people have tolerated it and allowed it to remain so long is almost incomprehensible.

The existing system is a compulsory debt-creating and a debt-perpetuating system and should have been changed long ago.

As long as it is retained we can not extinguish our national debt. It is founded upon indebtedness, to reduce which would necessarily contract the volume of our currency; to expand which would necessarily increase the public debt. To retain the system means to retain the public indebtedness. If we pay off our public debt, we must retire our circulating medium, and for this reason the system should be changed. For 50 years the people have paid interest on the Nation's public debt and will continue to do so without reducing the obligation as long as the present currency system is retained. Instead of basing our circulating medium on our indebtedness, as is done by the existing system, it should be based upon our assets, as is proposed to be done by the measure now under consideration. This is its merit over the existing system, and this distinction will meet the hearty and enthusiastic indorsement of the American people. They demand a currency based on what we own and not on what we have spent; on our wealth and not on the want of it; on our assets and not on our liabilities, as under the present system. The burdens of the people from which they have complained for 50 years can not be removed, but are perpetuated and increased from year to year by it. Under the proposed system they can be yearly wiped out. Under the existing system if we are to reduce our indebtedness we contract our currency, and if we expand our currency we increase the Nation's debt.

The people demand a reduction of taxation, the extinguishment of our public debt. Under our existing currency system this result is impossible, but under the proposed plan it is possible and can be gradually obtained. Does any man doubt the advantages of this measure over the antiquated, burdensome, debt-perpetuating system now in operation? If so, he surely believes debt is a blessing and not a misfortune, that taxation is an advantage rather than a disadvantage. The President has wisely, in my judgment, declared that it is essential that currency-reform legislation should immediately follow a revision of the tariff in order that the people may profitably enjoy the beneficial results which will flow from the reduction of high taxation and have a currency system that will adjust itself and respond to the requirements of our great and growing industrial and business operations.

With great prophetic vision he penetrates the future and desires to create a condition which will meet every requirement the future has in store for the people and have them prepared to take care of every possible condition which expanding business affairs may need.

Now, Mr. Speaker, some have denominated this an administration measure. I am glad they have done so, for no man in the past half a century has occupied the high office of Chief Executive who has had the confidence of the American people to a greater degree than Woodrow Wilson. The people of this country have implicit faith in his ability, integrity, and statesmanship. He is the greatest constructive statesman of the age; fearless, bold, and conservative, ready to discharge his duty as he sees it; free from all influences save the one to do right, as God gives him the power to see the right. He fears no master but the people; he serves no interest but the public good. There are no manacles of special interests on his body and no shackles of sinister purpose on his limbs. He is truly the President of all the people and has no favorites in any section of the country.

Day by day he discharges the responsible duties of his office without fear or favor and with eminent satisfaction, and is winning the approval of the people irrespective of party affiliations all over the country.

Tariff.

EXTENSION OF REMARKS
OF
HON. WILLIAM C. ADAMSON,
OF GEORGIA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, September 30, 1913.

On the adoption of the conference report on the bill (H. R. 3321) to reduce tariff duties and to provide revenue for the Government, and for other purposes.

Mr. ADAMSON. Mr. Speaker, the Underwood Tariff Act will immortalize its author, not only on account of the ability, patience, and urbanity displayed in its preparation and management through the House and through the conference, but because its results will bless the people in an unprecedented degree.

It is true he had allies and assistants in the great work worthy of their great leader. The result fulfills the promises of the Democratic Party and rewards the long and faithful efforts of its members.

This country, although handicapped by exclusive protective rates, has prospered and progressed by leaps and bounds, because, enjoying internal free trade between the States, it has generated a commerce greater than that of all the world besides, both domestic and foreign. In spite of the handicap in foreign trade it has become the workshop, clothier, and granary of the world, producing so much in field and factory which the balance of the world was compelled to have that we built up a tremendous export trade in spite of protective shackles restricting our opportunities and markets. Of course, we had to buy something abroad or the people we sold to would not have been able to buy our commodities, but if the handicap of exclusion had been reduced so that with reasonable taxation on imports we could deal in honest exchanges with the nations of the world needing our products, our foreign commerce would have kept pace with our domestic commerce.

The protective policy in its restrictive effect has borne hardest upon the South and West, both of which have been its victims, and the West has also been its dupe. The South always knew both the method and extent of its robbery as well as the reason why it was done. Protection was never necessary for anybody in this country. New England pretended that it was necessary to pamper her infant industries, but what she really meant and realized was that by shutting out competition she could exact higher prices and realize greater profits with less labor, risk, and travel.

While a few nabobs might not have grown quite so wealthy they would have acquired all they could use in this world under an open, fair system of competition, and all their neighbors and fellow citizens would have participated to some extent in a common prosperity which they have never known under exclusive protection. The South and West especially need an open field, and are prepared to enjoy the highest success and prosperity in competition with all the world in our own markets as well as all others. If the West can exchange its food crops with the nonproducing manufacturing and trading population of our own country to the extent of the home demand, and then be permitted to exchange the surplus abroad and bring home on reasonable terms the proceeds thereof, prosperity will begin to equal what God and nature designed for that region.

If the South, after furnishing on fair terms to the factories in our own country the cotton they spin and to the people of the country the cotton goods they need, taking in exchange the goods and wares of other industries, can then be permitted to sell the surplus abroad, taking in part payment therefor some of the products of countries which must sell their products to enable them to buy our cotton, the South will begin to realize that degree of opulence and comfort which it is justly entitled to enjoy and would have been enjoying now to an extent unprecedented on earth if the Republican Party had never been born to inflict protection on us. This handicap will be largely removed by the Underwood bill. Courage and confidence will return to the people. Realizing that they will be permitted to enjoy the rewards of their labor without having them filched away through the operation of protection, they will work with renewed energy, and prosperity will indeed bless a smiling land and reward the courage, patience, and patriotism of a glorious people.

The beneficiaries of protection have complained and groaned and cried "calamity," but there will be no calamity. The only mischievous results following the Underwood bill will not be due to the bill itself, but to the false statements of interested alarmists, who tried to delay or defeat its passage or impair its value. In my judgment, cotton mills will multiply in the South. You will find crops diversified there. Profitable market gardening and food production to supply the demands of increased manufacturing and trading population will increase.

The farmers, able to buy farming implements at a lower rate, will buy more of them, which will benefit the manufacturers and merchants by increasing their business. Producing most of their supplies at home, the farmers will be able to save something from a cotton crop raised as a surplus. When the cotton mills operate looms and spindles enough to take half of the cotton crop there will be no trouble about maintaining a fair price for cotton and holding it at a more steady rate; and the surplus that goes abroad will bring home showers of gold to maintain the balance of trade, and, in common with the exports of the balance of the country, encouraged by the possibility of more imports to make competition at home, not only the South but the West and East and North will cooperate to make us the richest as well as the greatest and freest country the sun ever shone upon.

Banking and Currency.

EXTENSION OF REMARKS
OF
HON. WILLIAM M. CALDER,
OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, September 17, 1913.

On the bill (H. R. 7837) to provide for the establishment of Federal reserve banks, for furnishing an elastic currency, affording means of rediscounting commercial paper, and to establish a more effective supervision of banking in the United States, and for other purposes.

Mr. CALDER. Mr. Speaker, I am opposed to the incorporating of any provision in the currency bill permitting any national bank making a temporary loan on lands of any character, but if this provision is to remain, the same consideration should be extended to the small-home owners in cities and villages throughout the United States who may be compelled to borrow money for a period not exceeding one year, and for that reason I favor the amendment offered by the gentleman from Pennsylvania [Mr. BURKE]. No one of any great financial experience can for one moment wish that banks of deposit be allowed to tie up their deposits in mortgages, a class of security which is not liquid, and thereby further decrease the possibility of payment to their depositors in case of stress.

No nation in the world has attempted to improve the condition of its agricultural borrowers by a further extension of the present system of loaning, for the placing at the disposal of the borrowers of a small percentage of the deposits of the national banks will only add to the burden of existing conditions and may imperil the banks. The need of the borrowers of money where farms and dwellings are pledged as security can only be met by the methods which have prevailed so long in Germany and in France. Here I wish to state that greater comfort, cheaper rates, and safer methods of borrowing are needed by the farmer and at the same time by the owner of the small dwellings in the towns, villages, and cities of the country, and no scheme which does not include both classes of borrowers should for a moment be considered by this House.

The present system of borrowing money on bond and mortgage by which the borrower obtains his money for a period of three or five years with the possibility and the probability of refunding that mortgage at its expiration with new charges, new commissions, and a new lender, is savage in its cruelty and does not attend borrowing in other great countries of the world.

I desire that a charter shall be granted to a great mortgage company based upon the methods of the Crédit Foncier of France. That company has been running now for over 60 years. The incorporators of such a company should be those men in this country who are willing to devote a certain amount of their recognized ability to the improvement of the condition of those who "have not." This company should afford an opportunity to the borrower on bond and mortgage to obtain a loan at a fixed rate of interest plus an amount not less than one-half of 1 per cent and not over 2 per cent per annum, which will be applied to the reduction of the principal of the mortgage—none of the mortgage loans made by this company to become due unless desired by the borrower until the entire principal is liquidated by the small annual payments. These small annual payments and the interest would be less than the small borrowers of this country are now paying for interest alone, and would result in the liquidation of the principal of a mortgage without any increased burden upon the borrower. This seems almost ideal, but is entirely practicable, when you remember that one-half of 1 per cent per annum will liquidate a debt in about 75 years, 1 per cent in approximately 45 years, and 2 per cent in approximately 25 years. At the present time in France a borrower can obtain from the Crédit Foncier a loan at 4½ per cent. If he pays 6½ per cent, which is 2½ per cent per annum difference, his entire indebtedness will disappear in 25 years. Now, gentlemen, this method of loaning is perfectly practicable in this country, as it has been in France and Germany, and it is used even in Egypt, Algiers, and Argentina.

The great Crédit Foncier obtains its money by the sale of its debentures to the little people, and this French mortgage company merely acts as the intermediary by which the savings of the "little" man are used to loan to the small borrowers. The small savings of the poor are thus not deposited in banks for the use of the big financial interests, but are placed in the debentures of this mortgage company, which have always redeemed at par since the organization of the company in 1852.

There are people enough to manage a company of this kind; there is capital enough to subscribe to its stock, and all that is lacking is the legislative authority of Congress—and, in my judgment, the time of the House would be well spent in discussing this great subject, which would be of such inestimable benefit to those who are trying to get ahead in this world and are compelled to borrow money. If the Democratic majority of this House would allow me the time, I should like to discuss the details attending the incorporation of a great mortgage bank, for I have given the subject much study. I should also like to show how such a company could be made to work hand in hand with those organizations which should be formed among the farmers for the purpose of giving short credits, based upon the credits of all, for any improvements which may be needed and which would add to the income of the farmer. Such lending is done under the Raiffeisen method, which has been much discussed in theory but little done toward its accomplishment. I propose, in conclusion, to read a speech made by Frank Bailey, vice president of the Title Guaranty & Trust Co., of New York City, at a conference of the State Bankers' Association held in Kansas City on August 26, 1913. In the city of New York, Mr. Bailey has already tried to furnish a mortgage running for 10 years to house owners, payable 1 per cent of the principal each year, and his experience with this method of loaning, and the general mortgage conditions in Germany and France, prompt me to incorporate his address as to some of the details of such a corporation. I commend it to the Members of the House, for I am sure its perusal can but be instructive to those who will take the time.

Mr. Bailey's speech is as follows:

THE DIFFICULTIES ATTENDING THE FURNISHING OF LONG-TERM AGRICULTURAL CREDITS AND A POSSIBLE PLAN.

"The discussions during the past six months in the press, in Congress, and on the platform have probably brought to the attention of all interested in finance and in the improvement of our producing population the necessity for some permanent improvement in the relations between the borrower owning a farm or a small dwelling and the lender on bond and mortgage. For the purposes of this discussion I am bound to assume that everyone present is familiar with the disadvantages under which the borrower on bond and mortgage now labors. To a great extent those relations have not yet passed beyond the primitive relations of barter. Rates of interest and terms of mortgages on adjoining properties of equal value frequently differ as a result of the negotiations between the borrower and lender.

"There exists in this country no central organization of sufficient size and importance to act as a proper intermediary between the borrower and lender, or of sufficient strength to influence the rate of interest or the terms of borrowing. Of course a borrower wishing money on bond and mortgage must find a lender, and in most cases the lenders are now represented by agents who act as intermediary or middlemen. The charge of these agents of necessity is so material as to add much to the rate of interest paid, even if distributed over the term of the mortgage.

"How the borrower on bond and mortgage is compelled to raise his money in the poorest possible market, inasmuch as it is a retail rather than a wholesale market; how he is compelled to take money for a short term of years; how he is generally forced to repay or renegotiate a new loan at the end of each period, usually three years, with new charges again to be added to the interest; how the maturity of a mortgage frequently comes in times of panic when borrowing is most difficult; how the surcharge interest, to wit, the expense of placing and replacing a loan, works to the detriment of the borrower; how the opportunities for the repayment of sums borrowed (except in bulk) are limited by the requirements of the lender—are too well known to need discussion here. The conditions are wasteful, extravagant, and unnecessary.

"The paper by Ambassador Herrick circulated by the Department of State shows with great care how other nations have solved this problem. It is to my mind, however, a little unfortunate that the discussion has so far been limited to the necessities of the farm owner, as if he were the only borrower worthy of consideration. The borrowers in the towns and cities, men who are struggling to own their own homes, are likewise entitled to relief in the same way as the borrowers on farms, and it is for all these classes of people that any scheme of relief should be planned.

"The ideal should be considered first—and let us talk for a moment of the ideal. There should be one or more places in every State of the Union where a borrower on bond and mortgage having satisfactory collateral could borrow money at a standard rate of interest, limited by the rate paid for the money

by the lender. Money so lent should run for a period of years, but under terms compelling the borrower to repay the money lent in small annual installments, running over a period of years, the term depending upon the class of property offered as security. Only borrowers having productive property of earning capacity and living on their farms or in their own dwellings should be entitled to borrow in this way.

"These mortgages should bear, say, 6 per cent interest, possibly 6½ per cent, and out of the interest from one-half to 1 per cent should be applied in reduction of the principal each year, and the borrower should have the privilege of anticipating payments, which payments when so anticipated should be credited to future reduction requirements, at the option of the borrower. This would act as a great safeguard to the borrower in that successful crops in one year would insure him to a great extent against the failures of a subsequent year. The lender should also have the right to waive the necessity of installment payments any year if so desired, to the end that relief might be furnished in times of undue stress.

"The cost of obtaining this money, to wit, appraisal fees, title fees, mortgage tax, and so forth, should be fixed and never repeated during the term of the mortgage excepting where reappraisal might be necessary. Such an institution should be prepared to lend money to the farmer, to the owner of homes in the cities and in the suburbs on a percentage of value running from 40 to 60 per cent, according to the marketability of the property.

"The terms of lending and rate of interest should be uniform in every State, excepting that the time of total repayment might vary, and a State not willing to pass fair laws determining the relations between borrowers and lenders should not be favored with the services of such an institution.

"Assuming that such an institution were prepared to accept mortgages at practically all times upon such rates as were fair to both borrower and lender, I know of nothing that would be more ideal for the advancement of the thrifty and the worthy savers of the Nation.

"It does not seem necessary at this point for me to dwell for a moment upon the necessity of starting such an institution if such ideals can be nearly approached. At the present time various States in the Union are passing laws enabling the formation of companies to lend money along the methods I have discussed. Such laws, in my opinion, are entirely futile in that they do not provide any method of furnishing the necessary capital to lend. Unless the State is prepared to underwrite and guarantee the debentures which must be sold for the purposes of furnishing this long-term money—a plan I do not favor or believe to be necessary—the capital to lend, I do not believe it will be forthcoming. Many institutions will be formed, however, which will attempt to lend money on the long-term basis, but they will be managed primarily for the profit of the stockholders, and will only add one more to those institutions of which there are now so many, practically brokerage concerns, obtaining from the borrower the maximum amount of interest in order to pay the lender a rate of interest sufficient to coax him to take that which he considers to be a risky investment. In no way can the money be furnished upon terms which will be of great and proper benefit to the borrowers unless there is formed an institution national in its scope, chartered by the National Government with a capital of not less than $10,000,000, with governmental representation on the board, with an audit made under the direction of the Government every six months or once a year, with a management which starts with the idea that its money shall be lent primarily for security; secondarily, at the lowest rate of interest compatible with the rate at which its debentures can be sold; probably three-fourths of 1 per cent per annum difference between the rate charged and the rate borne by the debentures would be ample. Such a company must have a manager selected from those men in the Nation who wish the country well and will use it not for exploitation but for the advancement of the interests of the borrower. Such an institution probably would, of necessity, form subcompanies in each State, one-half of the capital of which should be contributed by local interests, and each local company would in turn guarantee the parent company. The vast extent of our country requires personal knowledge of each locality and efficiency in the valuation of property for the purposes of loan can only be obtained from those who would lose because of errors in judgment. A man is very much more certain to be sure of the value of a piece of property on which a loan is to be made if he is a stockholder in the company lending the money. Fraud, acceptance of commissions, and the untoward things which have been attending corporate management in the past should be punished severely under the terms of the act forming the company. A company thus formed with a capital of ten to twenty million dollars, although an infinitesimal part of the amount required for this purpose, would enable the company to start with the necessary credit. Its character and the character of its management must then establish a market for its debentures, from the sale of which the business of the company can proceed. Its debentures, backed by such a capital, would day by day grow in popularity until they would, as in other countries, be a favorite investment.

"In 20 years the company of which I am an officer, lending money in Greater New York only, has sold and guaranteed the payment of nearly $400,000,000 of mortgages. So the establishment of first-grade credit is a necessity for the success of such an organization, for millions of money would be required. The company's credit should be artificially stimulated only by making the debentures legal investments for trustees and institutions in every State of the Union. Any other artificial stimulus, such as indorsement by State or Nation or by lottery—which is the favorite method in France—can but lead, especially in case of State indorsement, to tremendous disaster.

"In proposing a plan for such a company to be chartered by Congress, I appreciate that I am treading on dangerous ground. I know that there will be danger of centralization and that any management is more ready to lend its money where it can see the security than where it can not. The tendency of the management of the Crédit Foncier in France has been to lend its money in the cities and not sufficiently in the country. I know that corruption, where there is no standard value to real estate—a piece of property being worth what you can make the other man think it is worth—is almost too probable in such an institution; still, I believe that there are honest men in corporations who can be drafted for this work—men who are capable and efficient and wish this country well—who could make this plan succeed. The ambition of any man or men who desire the good of this country would find ample scope in such a concern.

"Decentralization could be accomplished by this series of subcompanies which, while controlled by the parent company, would have the individual capital of investors in each State, and each State, therefore, would look after itself and compel fairness on the part of the general management. Such a company should not be formed for farmers alone, for a man trying to own a home in the city is as worthy of aid as the farmer, and the success of the institution would come from the aid which it could give to all classes—both the farmer and artisan.

"No plan for the formation of a company has shown a way to obtain capital in sufficient quantities to be of any real benefit, and I believe that the plan I have outlined is the only plan which can furnish the credit necessary for success.

"I have in mind many of the safeguards necessary to the success of such an organization, but those are details which need not be discussed to-day. I would, however, suggest the organization of such a company, and believe in its success, because of the success of a smaller organization operating in the city of New York, an organization which has limited its profit practically to one-half of 1 per cent on each mortgage, has looked at the security first and its profit second, has been honest and profitable to a remarkable extent. I believe that the profit to the stockholders must come from a great volume of business done on a narrow margin rather than from 'hog' profits made on a little business, which is now the standard of most of the mortgage companies doing business.

"I would further extend the powers of this company so that it would have the right to purchase the obligations of small and large municipalities and sell its debentures against those obligations, so that the rate of interest to the small school district and the small borrower would be materially reduced. I would also give it power to furnish the necessary capital through the sale of its debentures for the advancement of those institutions which might be formed for short-term credits to the agricultural interests, such institutions as are known as Raiffeisen banks.

"There has been considerable discussion of the method of improving the short-term agricultural credit, but there has been up to the present time no method offered for furnishing the necessary capital. Such a company could furnish the capital.

"One of the great benefits of such an organization properly managed, in addition to making thrift to the borrower possible, is that it would teach the lesson of thrift by compulsion, for every mortgage would compel annual reduction by the borrower, small in amount, but sufficient to retire the entire principal during the term of the mortgage. It would also afford the plain people of this Nation a sound investment at a fair rate of interest, fairly negotiable, which is something that the people of this country need. The appalling sums of money which are lost by our people, who are otherwise astute, is lamentably

enormous. In no country is the 'gold-brick' dealer and the patent-medicine man so successful. Our unwillingness to accept the advice of the professional banker in our investments and of a doctor of medicine for our ills is altogether too characteristic and unfortunate. The professional banker and the individual who knew of an investment which did not increase or decrease in value, which paid a fair return, would quickly advocate the purchase of the debentures of this company. In the end they would become very attractive to those who save, so that the capital of this country which is now wasted in improper investments would be conserved to the advantage of those who save, and the entire Nation would be the gainer. If such a company could accomplish all of these ideals, of course we should start it this afternoon. Results will not come quickly. It will require a long agitation to produce a company such as I have outlined, and it will require most careful management to make it a success.

"I plead with you for your interest in this subject as I believe it is not a subject for politics, but it is a subject which goes right to the price of the food we eat. If a man owning a little farm and wishing to borrow $500, because of the cost of obtaining his money and the high rate of interest paid, pays $20 a year more than he otherwise should pay, it means that man produces less produce each year than he otherwise would produce if his capital came to him at a cheaper rate. If the little borrower can be brought to the lender through the mediary of a great central institution, whose size would be a tower of financial strength, whose management would give it a character not to be questioned by anyone in the country, the money of the masses can be obtained to help the masses. If, however, we make our aim any little goal, such as a little company with a petty capital, we will only put one more link in the chain around the borrower's neck. If we who are here are willing to put up the prescription which I have outlined, I think we will find the public prepared to take it, and, personally, I have no doubt of the cure, although I appreciate that the disease is so deep-seated that improvement will be slow though certain."

Banking and Currency Bill.

EXTENSION OF REMARKS
OF
HON. WILLIAM S. VARE,
OF PENNSYLVANIA,
IN THE HOUSE OF REPRESENTATIVES,

Wednesday, September 17, 1913,

On the bill (H. R. 7837) to provide for the establishment of Federal reserve banks, for furnishing an elastic currency, to afford means of rediscounting commercial paper, to establish a more effective supervision of banking in the United States, and for other purposes.

Mr. VARE. Mr. Speaker, while it would be idle for a member of the minority to offer amendments to the present banking and currency bill, it must be plain even to the Democratic Party that there can be no such radical change in the established banking system as is now contemplated without some disturbance of existing business conditions and considerable disturbance of banking relations. It is plain that this disturbance should be reduced to a minimum. The bill contains some provisions to this effect. I submit, however, that it does not go far enough. It provides, for instance, for the simultaneous establishment of 12 regional reserve banks.

As a matter of fact, I do not think that the present bill will work toward the relief generally demanded by the public, and as it is hopeless for the minority to effect a general change in the system proposed by the Democratic Party, I believe it my duty to call attention to the fact that to place this proposed system into fairly effective operation would require practically the entrance into it of all the national banks.

If all the national banks came in within a year, there would be afforded an aggregate capitalization for reserve banks of approximately $100,000,000. But no one claims that under the present system the banks would respond instantly and subscribe that amount of capital, even under the coercive plan outlined. Even if three-fifths of them responded within a reasonable time, the aggregate capitalization would be $60,000,000, or enough for 12 institutions of $5,000,000 each. But in the distribution of this amount Chicago and New York would contribute, and should contribute, at least two-thirds, leaving only $20,000,000, much too little to capitalize the remaining 10 institutions.

Here is a practical illustration of the difficulty of the plan to put 12 institutions into immediate operation. The probability that the difficulty would be actually encountered is the greater when the temper of the bankers is considered. To some degree the situation is psychological rather than real, but it demands attention just the same. It is real enough to the banker. He can not theorize. He wants concrete outlines and direct demonstrations. He has difficulty in seeing beyond these four results:

First. He will have to withdraw the balance he carries with his present reserve agents. This annoys him, because it will break relations long maintained, always agreeable, and usually of a personal nature.

Second. If he continues these relations, he must rediscount with the reserve institution all call loans to obtain funds, and thus lose some profit.

Third. He will lose the 2 per cent interest on his balances with the reserve agents.

Fourth. He must establish new relations.

All these things are stern realities with him, and against them can only be placed promises or predictions of advantages; and these are only matters of opinion. In short, the banker must be shown. What the Democratic Party is now doing, however, is to foist on the bankers 12 regional reserve banks which they do not want and which the public does not demand, establishing a system of credit which the bankers say is dangerous and objectionable, and yet which does not protect or please the public, and drawing from the banks so large a portion of their reserves that they complain that the currency system will be even more inelastic than at the present time. In other words, this bill pleases neither the bankers nor the public, nor anyone but the men who framed it and the party which has decided to support it in caucus.

A great deal of effort seems to have been made to benefit the banks of the South and West, and the Democratic Party has even considered proposals for issuing a special kind of currency based upon the wheat, corn, and cotton which the farmers have placed in storehouses. The party which has promised to reduce the cost of living thus appears as an instrument for attempting to raise the cost of living, and the people in the large cities—the shopkeepers and workingmen—are the ones upon whom the burden will fall.

The system of reserves as planned by this bill will work to restrict credit rather than make it freer. I do not believe that enough thought has been given to the small business man in the large cities. Most of the suggestions upon which this bill is based come from college professors. If we are now to have the system proposed by the Democratic Party, we will be worse off than we were before. Credit may be freer for the big business man, but I maintain that more credit should be given to the small business man—those without Wall Street connections.

The present system will not afford the relief desired, and the Democratic Party has made a serious mistake in establishing such a radical change in the currency and banking system, putting 12 regional reserve banks in operation simultaneously, and thus drawing large amounts of money from free circulation. If the plan had been established more gradually, the shock would not have been so great and improvements would ultimately have been effected. As it is, however, we will find that the directors of the Federal board of control will be yielding constantly to the pressure from different sections of the country for large sums of money, and in yielding to this pressure serious harm may be done to the other sections.

One of the worst features of the bill is the fact that the Federal reserve board, consisting of seven members, including the Secretary of the Treasury, Secretary of Agriculture, and Comptroller of the Currency, who shall be members ex officio, and four members appointed by the President of the United States, will naturally be of partisan character. The minority representation of this board will consist of two members, and only one member of the board is to be an experienced banker. In each President's term only one member of the board—the one appointed for two years—will be retired, and with the comptroller, the Secretary of the Treasury, and the Secretary of Agriculture new men will make up a majority on the board, absolutely under the control of the President.

Thus we will always have partisan control of the banking and currency system of the United States, and each time a new party comes into power we will find the banking system made the football of politics, with all sorts of efforts being made to control this important Government function.

It is because of these obvious defects in the bill that I have determined to vote against it.

The Tariff.

EXTENSION OF REMARKS
OF
HON. DAN V. STEPHENS,
OF NEBRASKA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, September 30, 1913,

On the conference report to the bill (H. R. 3321) to reduce tariff duties and to provide revenue for the Government, and for other purposes.

Mr. STEPHENS of Nebraska. Mr. Speaker, the high cost of living will be materially reduced by the operation of this splendid Underwood tariff bill, but it is not the panacea of all of our ills. This bill will in a great measure free us from the struggle hold of the trusts that have controlled our markets by bringing them some competition from the outside, but it can not remove the billions of dollars of counterfeit capital that these trusts have put into all of our industries and upon which the American people are compelled to pay interest through the increased prices of the necessaries of life. Not only have all of our industries been brutally robbed by "high financing," but the arteries of trade, the railroads, have also been plundered by stock watering and freight rates doubled in order that an interest rate may be earned on their counterfeit stock.

No matter how honest our tariff bill may be, it can not remove the watered stock from our industries and railroads, and this item alone has added many times more to the high cost of living than has the robber Payne tariff bill. This Underwood bill will cut out the special advantages that big business has had by being in partnership with the Government in a contract to shut out competition from abroad while big business collected its tribute from people at home, but the possibility of offsetting our advantage is still left open for the promoters to continue the stock watering of our industries, which is the quickest method ever known for transferring the wealth produced by the people to the pockets of the Money Trust via the watered-stock route. It is a complex game these high financiers play, and the average citizen is not acquainted with it. He can not see his relationship to the bankers of Wall Street, and never will till he gives some attention to the subject.

The average citizen works hard for his daily bread and excuses himself for not taking more interest in public questions with the thought that he has delegated the power to act to a representative. "Let him study the public questions. That is what he is paid for." This transfer of responsibility would be well enough if the average man would always know when his public servants were truly representing him, but the average man who does not keep himself well informed on matters of public importance does not know when he is being represented. The facts of history show that his absorption in his own affairs to the neglect of his public duties leaves him at the absolute mercy of schemers and sharpers who are always on the lookout for chances to rob the unwary. It is the absorption of the average man in his own immediate affairs that has led to the transfer of 90 per cent of all the wealth of the Nation into the hands of 10 per cent of the people. The 90 per cent produced the wealth in the sweat of their faces, and, by some hook or crook, the 10 per cent skinned them out of it. The theft was easily committed and is being daily committed, because the average man is dead to the causes of his troubles. He will not study public questions. He sometimes considers his public servants owe him a favor for the sacrifice of the time it took him to go to the polls to vote. It often happens that only a small per cent of the total male population votes at a primary election. The average man refuses to believe that the public business is his business, and the result is the sharpers fleece the people of the results of their hard-earned labor.

If a man does not study public questions he can not tell whether his public servants are truly representing his interests. One public servant says a thing is so and another says it is not so. One may be speaking for the 90 per cent, the other for the 10 per cent, but the man who does not study public questions can not tell which is true and which is false, for they both speak fairly and reason plausibly in behalf of the people. He, the voter, being busy with his own affairs and forgetting that attention to public business is vital to his success, is completely at sea, so he guesses at the right one and misses as often as he hits. The result is the transfer of 90 per cent of his productions to the pockets of the man who neither spins nor weaves. These are cold facts that are well known to him who studies the relationship he bears to society as a whole.

It will not do for a man to make the excuse that he is too busy to give attention to public matters if he wishes to protect the product of his toil. Ignorance of questions that affect society as a whole leaves him at the absolute mercy of schemers and shysters. The average citizen may be robbed without his ever knowing it by men thousands of miles away and by methods wholly unsuspected by him if he keeps his eyes forever on his own little job and does not study his relations to society in general. For example, while the farmers of Nebraska were busy keeping the wolf from their doors schemers were doubling and in some instances quadrupling the capital stock of the railroads by filling them full of water, upon which they must pay a doubled and quadrupled freight rate forever on everything they buy and sell that the railroads handle. While they were too hard worked, too tired, as they thought, to study the question, they were being held up and robbed in the most brutal fashion. Time spent studying the other side of their business, which is marketing and buying, would have yielded many times what they actually got for their daily toil in the fields. They would have sent intelligent men to their legislatures and to Congress with specific instructions on what to do. The trouble has been the farmers did not know, and, not knowing, did not care, nor did their representatives, what was happening to them, and the marvel is that they have as much property left in their own names as they have.

But the farmers are beginning to take notice. They are already full of suspicion that they have been skinned. Back in the eighties I burned corn for fuel on a Nebraska farm because it was too cheap to sell. In fact, 10 cents a bushel did not pay for marketing it, and when necessity was not too great we burned it rather than chop wood or buy coal. It was easier to husk corn for fuel than to chop wood and cheaper than to buy coal. Was corn cheap because there was too much of it? No; it was simply the idiotic management of the railroads and the rapacity of grain speculators. They charged more freight and profit than the traffic would bear, so they lost some of the business and starved and robbed our people at the same time.

That ought to have caused us to take control of the railroads through the strong arm of the State, but the pass-carrying men who represented the railroads, while pretending to represent us, told us we produced too much corn and glutted the market, and being too busy to trace the story back to the liars and crooks who were responsible for it, we let it go, and the people of Nebraska to-day are being robbed by freight rates on watered stock of countless millions of dollars annually. The robbery is more heinous than that of a highwayman, who takes his loot at the point of the gun. He at least has the courage of his inclinations, whereas the thieves who robbed us by watering railroad stocks did it while pretending to be our friends, and worked the fraud upon us when we were too ignorant and poor to resist them.

Now our troubles are coming to a head rapidly, as the high cost of living increases and the price of labor does not keep pace with it. The example of turning counterfeit railroad stock into cash and compelling the people to pay a dividend on it in the form of increased freight rates led to the same transactions in practically every large and profitable industry in the United States. For example, the steel mills of the country, worth possibly $350,000,000, were gathered together under one head known as the Steel Trust, and were capitalized for $1,400,000,000, probably a round billion dollars of which was watered stock not worth a cent. When the trust got complete control of the steel output it pushed up the price and the watered stock began to earn a dividend. Every year steel products have gone up in price, and everything the people use into which steel enters has gone up in price correspondingly. The American people therefore are paying a dividend on a billion dollars of capital that has no basic value back of it save the power to tax the people on the increased price of steel products. J. Pierpont Morgan received $66,000,000 commission for this gigantic robbery of the people of a great Nation, and he used the people's money and credit on deposit in the banks of New York City with which to turn the deal. There have been thousands of men hung for a less offense against society than this. And yet this is not the only sin charged to Morgan & Co. He was able to organize more trusts than any other man of his time, and the poverty and suffering that is sure to follow in his wake will surpass that ever caused by any other man who ever lived on the earth who was not vested with kingly power to tax the people.

The case of the Steel Trust is only one in thousands, only it is the largest and most flagrant. The watered stock in its organization equals nearly the whole net earning power of all the people of Nebraska for two years, and the commission of

$66,000,000 paid Morgan & Co. would run our State government for many years. In the face of these wholesale robberies of the American people the agents of the plunderbund have the unmitigated gall to charge the high cost of living to the farmers of this country, who produce the wealth that pays the dividends on the countless millions of counterfeit stock in our industries and railroads.

All these things have been possible only because the average citizen has not informed himself on questions affecting society as a whole, and has permitted special interests to influence legislation. Recently a beef packer made the statement that beef would go to a dollar a pound if farmers do not raise more cattle, and he should have added, "for the packers to plunder them of," for that is exactly what has happened and that is why cattle are scarce. The farmers have simply refused to produce beef in sufficient quantities because it is too hazardous a business. The nerve of these beef packers, who simply rob the public on the one hand and the farmers on the other in as cold-blooded a fashion as a pirate ever cut a throat, is a spectacle to shame the devil himself. Their robberies are made easy because the average citizen refuses to interest himself in questions beyond his own dooryard, shop, or store. If he once informed himself how the trick is turned, the trouble would soon be over. It is so easy and simple that these packers make the devil green with envy. A thousand farmers will start a thousand cars of cattle to the market the same day without regard to the condition of the market or the number of offerings. A half dozen packers know exactly how many cattle are coming and they agree among themselves as to the price they will pay and the division of the shipments. The farmer has no choice. He barters around with a commission man for awhile and fools himself with the idea that he is helping himself, but he is not. It is all a cold-blooded frame up. The packers know these cattle can not be shipped back, and if they were, there are no other packers to sell to. The Beef Trust has the farmers by the throat, and will have until such time as the farmers get informed on these questions and are willing to cooperate in marketing their beef. They can control the packers when they get together and go after them.

At the present time we have such idiotic performances as this: A rancher at North Platte, Nebr., wants to sell his yearling steers. He ships them over the watered-stock railroad to Omaha. Another rancher or farmer has pasture, so he buys them and ships them back over the watered-stock railroad to Grand Island and pastures them a couple of years. Now, they are ready for the feed yards, but he has no corn, so he ships them back to Omaha again over the stock-watered railroad, and a farmer who tried to buy them at Grand Island and save the railroad freight, but could not, because the owner thought he could get more at Omaha, bought them at Omaha and shipped them back to Grand Island the next day and put them on feed. He keeps them six months and sends them to Omaha again and lets the packers have them at their own price. It takes nerve to go against a packer. It is simpler and easier to gamble on the board of trade and save one's self a nasty, cold, winter job of carrying corn to the cattle.

That bunch of cattle was shipped five times over that water-logged railroad, a distance of from 150 to 300 miles each trip, paying an extortionate freight rate. It is an exceptional case, but the average run of steers, ready for the packer, have been sent over the road three times. Everyone suffers as a result of the folly, and it can not be stopped until farmers organize marketing associations. When that day comes they will be able to sell cattle before shipment and ship direct to the purchaser with a minimum freight to pay. They will also bring the packer to his knees or pack their own meat for the public. This steadying of the market will encourage men to produce beef with the assurance of a profit rather than the risk of bankruptcy. Every neighborhood in the corn belt has men who have been financially ruined trying to produce beef at a profit. That is why cattle are scarce. The producer can not go on forever making money for the packer at a loss to himself.

Ten or fifteen years ago the prune growers of California were cutting down their orchards, for they were wholly unprofitable. The grape growers of Michigan were grubbing out their vineyards. They had been ruined by haphazard methods of marketing. Hundreds of cars of their fruit would arrive in big centers from hundreds of isolated shippers, with no one to look after them but commission men who were looking after themselves. The result was natural and logical. The same thing happened to them that is now happening to the corn and beef producers. They were robbed and their fruit often given away when an excess amount was thrown onto one market.

There were some wise men among these fruit growers, and after many discouraging efforts, beset on every hand by jealousy and ignorance, they succeeded in organizing associations for marketing their product. The associations now market the product of all their members by placing the fruit where it is needed and in such quantities as the people can use. The result is the fruit growers are comparatively independent and their business has become prosperous, and the public has not in the least suffered as a result of this system in marketing. There is no watered stock in these associations.

The high cost of living resulting from high financing of our industries and railroads is the penalty we have to pay for our ignorance and indifference to public questions. If men are ignorant of conditions and the methods of the plunderbund, they are unable to pick out their friends from their foes, and are as apt to support a representative of the special interests as they are a friend of the people.

As an example, Congress is now in a mighty struggle with the Money Trust in an effort to frame a currency bill that will take from Money Trust vaults a half billion of dollars of the people's legal bank reserves, which Morgan & Co. used in organizing the Steel Trust, and place them under Government control in Federal banks. These guardians of the people's reserves—the Money Trust—will not let go without a terrible struggle, so they are poisoning the minds of country bankers in order to get help to defeat this reform in the interest of the people. Our only chance for winning the contest with the Money Trust lies in an intelligent study of the question by the people and country bankers, because Congress will not be able to fight the Money Trust and the home folks both at the same time. The system always counts on there being enough selfish and ignorant people in the country to enable it to put the screws on the money market a little and at the same time tell them that proposed legislation is the cause of it, to start a hue and cry against the action of Congress. In other words, when Congress is about to put the screws to the Money Trust its cry for help brings to its aid the timid, the cowardly, and ignorant, who prefer slavery forever to a little temporary self-sacrifice in the cause of humanity. If we can once get this currency bill enacted into law we will have taken the first step ever taken to control this monster that is eating at the heart of the people.

Those who refuse or neglect to study the problems of life that are ever before us are simply contributing to the enemies of free institutions and a free and independent people. It is this class who have contributed to the downfall of all the nations of the earth in the ages dead and gone by their indifference to the public welfare. Let us profit by their example and refuse to allow our country to pass into the hands of those who would enslave and debase the people. The remedy lies in the general enlightenment of all of the people through the study of the problems of society and government. The man who uttered these words, "Eternal vigilance is the price of liberty," uttered God's solemn truth, and every people throughout all the history of the world who have disregarded this truth have sunk to serfdom and slavery and have passed out of existence as organized governments.

The Tariff.

EXTENSION OF REMARKS
OF
HON. J. THOMPSON BAKER,
OF NEW JERSEY,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, September 30, 1913,

On the adoption of the conference report on the bill (H. R. 3321) to reduce tariff duties and to provide revenue for the Government, and for other purposes.

Mr. BAKER. Mr. Speaker, it is manifest they have had a fall—they who sit on the other side of the aisle which is said to divide the wise from the unwise, or otherwise—a far fall and a hard fall. When the precipitation has been suffered, has attained the grammatical position of the perfect tense, there is little to gain by bawling about it. We know that to bawl is neither a valuable nor commendable nor appreciative indulgence, for it betrays a chaotic state of mind, or, to speak with greater euphony, it lends latitude to the fair inference, the just surmise, that something has transpired which gravely contravenes the felicity of the one who bawls. Besides, to bawl is to disturb the equanimity of the cadences which normally are dependable to preserve harmony in the local atmospheric zone; also, bawling has never been classified as an accomplishment, nor has it arrived at the dignity, let alone the effervescence, of

a social triumph. To be sure, the word illustrates the fertility, the fecundity, the facility, the universality of intelligence deducible from a single syllable of the Anglo-Saxon tongue, for there is the occasion when "we chase the glowing hours with flying feet," called the ball; there is the diminutive spheroid, tossed and hurled and batted by youth and age alike, the ball; there is the elongated form of liquefied exhilaration called the high ball. All called ball; all suggestive of moments of pleasure; all have the mind with memories of delight; none of them is the bawl which stung our ears, but they have the honor in our delectable language of being real things, nouns, while the bawl that grates upon our nerves is only a homely, restless verb, and its activities take participial form known as bawling and mark the chronic occupation of those who have sinned away their opportunities to serve the state, and therefore they now frequent the wailing places of disappointment and remorse.

Who can gainsay the rightness of these pains and penalties? The majority of the American people believe the tariff system as constructed and fostered and increased from decade to decade by the devotees of the prohibitive system is anything but protective in the final analysis. They believe it is the most subtle scheme ever devised by unscrupulous men to make labor a hewer of wood and drawer of water for the benefit of the few; that it is the most stupendous confidence game ever practiced against honor, intelligence, and patriotism; that to use the word "protective" as a qualification of the American tariff system as it is now adjusted and stands on our statute books is the worst misnomer ever employed to delude the unwary. The people believe those who are devoted to this system are like Dagon, god of the Philistines, "who had eyes but saw not and ears but heard not." They believe the prohibitive protectionist could learn wisdom from the pantheistic augurs, who cast horoscopes from the harnspices deduced from the smoking entrails of dying animals; that they could get better light on the civil rights of men from the guttural mutterings of a North American Indian medicine man. They believe our tariff system as now adjusted is an obstruction to American progress; that it compels us to consume ourselves; that it paralyzes our energies as a commercial and manufacturing Nation, for it discriminates against our people of small means and antagonizes the markets of the world, and with its kindred navigation laws it has driven our merchant marine from the high seas; that it has blinded us to our real interests and has robbed us of the arts and opportunities of competition. It handicaps our diplomacy, for it has hostilized the civilized world against us. They believe it is the father of the treason that turned our Congress over to the tender mercies and superserviceable dicta of the Speaker of the House. Cromwell needed Roundheads to drive Parliament from its halls; Napoleon had grenadiers to disperse the Council of Five Hundred. It needed only the facile consciences and servile prejudices of prohibitive protectionists to surrender here all real power of legislation into the hands of one man—the blackest blot that blasts our boasted civilization. It has made us the laughingstock of all intelligence.

Even a Patagonian knows if he cures more wild hides than he can use he must find a market for them. It is to this system as now adjusted, this Moloch, sweetly named "Protection to American Industry," we owe the demoralization, the degradation, the pollution of the American electorate. It has filled our halls of legislation with sycophants, our gubernatorial chairs with acrobats, and has subjected us to the derision of mankind, which has come to look upon our glorious Capital as the paradise of parasites and a bulging bed of barnacles.

We are in the situation of a man who has been enticed to the top of a high mountain. He has been told the air is purer there; that there are no disease germs there; that the atmosphere is translucent there; and that he can see the whole world from this pinnacle. But he found it was cold there; that there was no water there, nor food, nor clothing, save for the favored few; and he wanted to return to the valley where the brooks meander and the flowers and the harvest bloom for all. How shall he get back into the vale of reason and universal happiness? Shall he hurl himself from the top of the mountain, or shall he pick his way down with circumspection, avoiding the caves and gorges and pitfalls that beset his footsteps? Which is the safe and sane way?

We have been lured to the top of a prohibitive protective-tariff mountain. We are riding a horse that has been fed with condiments until he is bursting with artificial exhilaration, and the whole world knows that we are riding for a fall. How shall we curb this steed; how shall we descend from the regions of folly into the realm of reason? We are doing it by stages, by readjustment on equitable and honest lines until we shall be once more recognized as "clothed and in our right mind," on the subject of the taxing power of governments.

Cotton Futures.

EXTENSION OF REMARKS
OF
HON. HORACE W. VAUGHAN,
OF TEXAS.

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, September 30, 1913,

On the amendment to H. R. 3321, relating to taxing gambling on exchange in cotton futures.

Mr. VAUGHAN. Mr. Speaker, being unable to obtain any part of the time, which was necessarily very limited, allowed for debate on the conference report as it relates to Senate amendment No. 600, known as the Clarke amendment, taxing gambling on exchange in cotton futures, I avail myself of the privilege granted to print remarks in the RECORD, in the hope that when the subject is before the House again, as it will be, for the House has refused to concur in the Clarke amendment and the Senate will not agree to the substitute which the House has proposed in lieu of it, the Members from the cotton-growing States may get together and agree upon the legislation needed to remedy the evil and vote for it solidly. Members from other parts of the country will support whatever may be agreed upon by the Representatives from those sections directly affected by legislation upon the subject; at least such appears the disposition now.

Under the operations of the exchange speculators who never owned and do not expect to own a pound of actual cotton sell and promise to deliver in the future many times more bales of "phantom cotton" than the total number of bales of actual cotton produced by all the tollers in all the cotton fields in the land. The operations of these speculators and the gamblers upon the exchange keep the price of cotton fluctuating, going sometimes up a little, sometimes down a little, now jumping and then dropping, always fluctuating and responding to the manipulations of the bulls and the bears, as the one or the other may gain advantage.

The operations of the speculators on the exchange affect the price of actual cotton when sold on the market; in fact, the price of the farmer's cotton is fixed by the sale of "phantom cotton" by the speculators, and fixed in a market where the "phantom" is put in competition with the real article, where the speculator, without any cotton, puts his promise to deliver in the future in competition against the farmer's actual cotton.

Under these operations the price of cotton is, to say the least of it, too largely controlled by speculators on the exchange, and this control or influence of speculators on the exchange upon the price has operated against the farmer and has been injurious to him. This is evidenced by the fact that during the time the farmer is selling his cotton the price drops lowest, and after he is "separated from it" the price goes highest. Senator CLARKE shows this very conclusively in his speech delived in the Senate on September 1.

The evidence taken at various congressional hearings, and the reports of Government officials charged with the investigation of the subject, fully sustain the case against gambling on the exchange as being injurious to those engaged in the cotton industry, and against the operations of the exchange as heretofore and now conducted as being in greater per cent gambling transactions.

For years the farmers have complained against these gambling operations on the exchange, and various propositions have been advanced to remedy the evil. Representatives from the cotton-growing States have thundered long and loud before audiences of their constituents against these gambling operations, sometimes giving a shower of tears along with the thunder; and they have spoken much against the evil in this Hall in the past, and declared what they would do if they had the power.

The time has come; the opportunity has arrived for action. What are you going to do? If you are sincere, if you wish to do what you have been telling the people you wanted to do, if you want to protect the farmers against the vampires, the Clarke amendment will do the work, and it will not lay the tax on any transactions or dealings in cotton except those into which the parties enter for the purpose of gambling on the rise or fall of the price. It will drive the vampires from the market and leave it free to legitimate dealings.

They say that it will tax "hedging" so high as to prohibit it, and that "hedging" is not gambling. Well, what is it, when the "hedger" has no intention of delivering the cotton which he contracts to sell in the future, and merely makes the contract as a means of betting that the price of cotton will go down to protect himself against loss on actual cotton he has contracted for and expects to be delivered at a certain time in case the price should go down at or before that time? Does not the "hedger" enter into a gambling transaction in the hope of avoiding loss on a contract for purchase he has made?

We are told that we should not use the taxing power for the purpose of prohibiting the evil, that to do so would be to prostitute the taxing power. Was it a prostitution or a misuse of the taxing power to use it against the opium trade? Only recently a bill passed this Congress taxing opium for the avowed purpose of prohibiting the use of it, except for strictly legitimate medicinal purposes.

We are told that the exchange furnishes a constant market for cotton. It is not proposed to destroy the exchange, unless taxing the gambling operations on the exchange will do so. Can not the exchange live without the toll it collects from the gambling operations it conducts?

Currency.

EXTENSION OF REMARKS
OF
HON. BENJAMIN IRVING TAYLOR,
OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, September 30, 1913.

The House granted Mr. TAYLOR of New York permission to extend his remarks on the bill (H. R. 7837) to provide for the establishment of Federal reserve banks, for furnishing an elastic currency, affording means of rediscounting commercial paper, and to establish a more effective supervision of banking in the United States, and for other purposes.

Mr. TAYLOR of New York. Mr. Speaker, at the outset I was of the humble opinion that President Wilson was making a mistake in forcing currency legislation upon the country at a time when a new tariff bill was to take effect. Since I have given some study and thought to our currency system and the provisions of the Glass bill, I have become convinced that the prosperity and happiness of the American people are absolutely at the mercy of a few high financiers, so called, because of our loose national currency system dominated by Wall Street and its gambling contingent. It is therefore high time that the system be remedied—the quicker the better.

It would be unwise to reform the system along some of the lines proposed by Members of this House. It would be the height of folly to prohibit the stock gambler of Wall Street from conducting his stock speculations with money furnished by our banks and at the same time require the banks to accept a grain elevator certificate with an insurance policy attached as security for a long-time loan. This would permit speculation in wheat, corn, cotton, barley, and other necessities of life, a far more destructive form of speculation than that of stock gambling. Nor would it be wise to make such a certificate equivalent to money, as was so eloquently proposed to this body.

The reason why we adopted the gold standard is because we realized the necessity of having a fixed standard for all things of value, gold being our most valuable metal, the value of which fluctuates less than that of any other thing of value. Wheat, corn, cotton, barley, and so forth, are constantly fluctuating in price. Any currency system that adopted a certificate based upon such values as money would be unstable and disastrous. Thanks to the good common sense of the great majority of the Members of this House, amendments along these lines were kept out of the bill.

It has surprised me to learn during the debate on the Glass bill that so many Members sincerely entertain such peculiar and opposite views as to what money is, how it should be distributed, and what is necessary to be done in order to give it free circulation. When I consider these divergent views and the fixed ideas the different Members have in regard to them, I am firmly convinced that the gentleman from Virginia deserves all the credit possible for presenting a bill with so few wholesome objections and so many admirable provisions.

As the bill made its progress through the House he was always fair enough to admit when he was wrong and to accept amendments setting himself and friends on the committee right. If this spirit had not been evinced, I might venture to predict that its passage would never be accomplished.

Considering the fact that for years complaints have been lodged against our present system, that nobody raised a voice in its defense, but all united to condemn it, and that for years genuine efforts have been made to create a system to take its place without success, we must all acknowledge the Glass bill is a step in the right direction and almost as good a bill as might be expected where compromises have had to be made to unite as many as possible to its support.

If we were to devise a system based upon the fact that we had sufficient specie to transact all our business with, our task would be easy. The volume of our business involving the use of money or credit obligation is six or seven times greater than the amount of our actual cash or specie. We are therefore required to create a credit system so regulated as to keep our specie in free circulation, ever ready to flow into sections where demands for it are made. A system of this character is difficult to devise, as the maker is always confronted with the fear that some provisions will unduly contract and others permit careless inflation of currency. Either of the defects would work ruin unless they were properly safeguarded against. If the Glass bill provides these safeguards and at the same time furnishes an elastic currency system, it has done all that can be expected.

It seems to me that the Government deposits of specie in the reserve banks and the rediscount privileges will more than overcome any contraction that may result from compelling the national bank to retain 12 per cent of its deposits in cash in its vaults or those of its reserve bank. It is seriously contended that inflation and wildcat speculation will result from the undue exercise of the provisions contained in the bill, allowing unlimited issue of Government notes to be based upon notes and bills accepted by reserve banks for rediscount, such notes to be Government obligations.

At the outset the Federal reserve board retains absolute control over these issues, the nature and kind of securities demanded, and may increase the gold reserve fixed by the act to protect these Federal notes. Personally I would like to see this privilege better safeguarded. Still, when I consider the benefits contained in the bill, the reserves required to protect these issues, and the further fact that the reserve banks must apply to the Federal reserve board and show good reason why an issue of these notes should be made, it seems improbable that a reckless use of this power would be made. I have concluded I should not refuse it my support because of this one provision. After all, power must be lodged somewhere; the fact it might be abused is only one reason why it should not be given, whereas there are numerous good reasons why it should be granted in order to create an elastic system.

Our national banks have in order to meet the demands of trade and business attempted to provide a uniform system in their dealings with each other. Each bank has selected in one of the large reserve centers a correspondent bank from which it borrows money for rediscount, exchange, and other purposes, and deposits with the correspondent bank its reserve funds, upon which it receives interest at 2 per cent.

The framers of the Glass bill, bearing these customs of the national banks in mind, have created regional reserve banks, which will perform the functions of retaining reserve funds, rediscounting, and other purposes of the present correspondent bank. Complaint is made because the Glass bill will require the country bank—and, in fact, all national banks—to retain 12 per cent of its deposits as a reserve fund in its own vaults and those of the regional reserve banks. This money will be taken out of circulation; and because of this fact, it is claimed the bill will contract the currency of the country. It neither seems unfair nor unreasonable to require a bank to retain at least 12 cents on every dollar deposited for the protection of its depositors. In other words, our national banks should be able to do business and pay dividends upon the remaining 88 per cent of the depositors' money, to say nothing about the Government and other funds, which they will receive for rediscount purposes and have available in their respective localities.

The millions of dollars in reserve have for years found their way into Wall Street where they have been used for gambling and speculative purposes and frequently for the purpose of tying up the money of the country so as to cause a scarcity in money and create an excuse for an increase in interest charges generally at a time when money was demanded for moving crops and other legitimate business purposes. During the months of July and August of this year we had a fair example of this method of the banks. They began to collect all these reserve and other funds in the city of New York, knowing that there would be a large demand for money to move the crops and conduct the full business of the country. Call money reached as high as 10 per cent and was going higher until the Secretary of the Treasury came to the rescue of the country by doing the unprecedented thing of actually loaning the Government's money to the farming sections for crop-moving purposes. As soon as he made this

announcement money rates dropped to 2½ per cent, and the banks in the city of New York let loose millions of dollars.

This process might be considered high finance, but in my estimation it is plain highway robbery, and the humorous thing of it all is that the blood-sucking transactions were being carried on with the people's money deposited by them in their banks.

It was with the use of this enormous reserve fund that the stock gamblers in Wall Street bought up control of the New Haven Railroad and caused millions of dollars in watered bonds and stocks to be issued to the innocent public, and as a result the New Haven Railroad, for years considered one of the most valuable and best-conducted railroad properties in the world, now lies almost in wreck and ruin. The purchasers of its stocks and bonds have lost millions and at last have become convinced that our great captains of finance are not such great philanthropists and God-fearing men as they were once considered. It is not only the stockholders of this railroad that are now suffering because of the manipulations of these captains of finance, but the general public. In order to make dividends on this enormous watered stock and bond issue, passenger and freight rates have been increased beyond reason, so that the country along the road is becoming depopulated, land and property values have decreased to the point of ruin. The Glass bill should be supported because it will have the effect of taking this enormous sum of money from Wall Street and guard innocent people from being debauched and robbed with their own money.

The depositor's money should be available for business and commercial purposes, and never for speculative or gambling. The depositor does not place his money in the bank for that purpose. I have read with interest the criticism of the bill made by their large bankers. From the tone of their articles, I was convinced that these gentlemen are of the opinion that they are in the banking business solely for the purpose of making dividends for their stockholders. In truth, they are trustees of the people's money and their primary duty is to protect the depositor, and making large dividends is a secondary proposition. The Glass bill makes this duty of the large banker very plain, and from past performances many of them have entirely overlooked their duty in this regard.

A central bank with branches in every section of our country would, no doubt, furnish us with the best system of banking that could be devised. The people of this country have since the days of Andrew Jackson been firmly committed against a central national bank. They justly fear such an institution and the enormous power for political control and manipulation that would be vested in those controlling the central bank. They would have the power to increase or withdraw funds from one or more sections of the country for the purpose of influencing the political opinion of the people therein. There is no political party to-day that advocates a central bank. The bankers, because of the jealousy existing between them, do not advocate a central-bank system, as one set of bankers are afraid that the other set would gain control to the disadvantage of the first. In the Aldrich bill, approved by the bankers, they did not dare create a central bank vested with the powers of a banking institution; it was merely proposed to create a central clearing house.

Since the Glass bill was reported a great deal of discussion has been had as to whether or not the bankers or Government should control the banking business of this country. The bankers in neither Russia, England, France, nor Germany control the currency system. It is recognized as a function of the Government. The crown heads of Europe are thoroughly acquainted with the powers that go with a national banking and currency system, and for their own protection have retained this power unto themselves. Surely if the ruling powers of Europe recognize the enormous influence attached to their currency and banking systems, we in this Republic must give them the same recognition. It has always been one of the fundamental principles of this Government that no power within it should become greater than the Government and that all power, for the protection of the Government, should be diffused. This is the underlying thought that we have in the discussion of the trust question. It produces a feeling that the concentration of power should not be permitted.

Under the Glass bill the Government's deposits, amounting to millions of dollars, will be taken from its vaults and placed in circulation through the regional reserve banks. It neither seems unfair nor unreasonable that the Government, being such a large depositor, should not only have representation, but should actually control the entire system, if for no other reason than to protect its deposits. When it is considered that the system is divided into 12 districts, the banks in each district having absolute control, and that the Government merely has representation on the Federal board, which is advised by a council of bankers, it is absolutely improbable or impossible for politics directly or indirectly to have any control over the system outlined in the Glass bill. If politics were attempted, the system is so diffused and the opportunity for detection so great that the politicians attempting to manipulate the system would soon find themselves entirely out of politics.

For years the bankers have been contending that the Government money should be put in circulation. The Glass bill provides for putting it into circulation. They have been contending that they should have the right to establish foreign branches; that Canadian and English banks were doing all the foreign banking; that our bankers were losing the commissions on foreign business. The Glass bill also provides for the establishment of foreign branches. Since the establishment of trust companies, who pay interest on their deposits, our national banks have been asking permission to establish savings branches in connection with their banks. This privilege has always been denied them, but under the Glass bill provisions have been made for this very thing.

Every reasonable suggestion of the bankers, except Wall Street control of the reserves, has been complied with. This bill is such a great improvement upon our present system that I feel it is my duty to support it. No doubt there are many objections that could be made to it. In my mind its many beneficial features far outweigh and overcome the few objectionable features.

Banking and Currency.

EXTENSION OF REMARKS
OF
HON. ROBERT J. BULKLEY,
OF OHIO,
IN THE HOUSE OF REPRESENTATIVES,
Friday, September 12, 1913.

On the bill (H. R. 7837) to provide for the establishment of Federal reserve banks, for furnishing an elastic currency, affording means of rediscounting commercial paper, and to establish a more effective supervision of banking in the United States, and for other purposes.

Mr. BULKLEY. Mr. Speaker, let me say a word about the contention that this bill imposes a hardship on the country banker. It is said that the new arrangement will cost him dearly because he is to be deprived of the interest which he now receives from the reserve city banks on his reserve balances. Let us figure that out. Against each $100,000 of deposits the country banker is now required to carry a reserve of $15,000. Of this, $6,000 must be cash in his vault, drawing no interest. If he gets 2 per cent on the other $9,000, it will amount to $180 a year. Under the provisions of this bill this $180 interest from the reserve city bank will be lost to the country banker; but inasmuch as he will in the future be obliged to carry but $12,000 reserve instead of $15,000 as in the past, there will be released from his required reserve $3,000, and he will have this additional amount to lend. If he lends it all out in cash at 6 per cent, he will receive $180 a year, or just enough to reimburse him for the loss of the interest which he has been getting from the reserve city bank; but if he uses the $3,000 as reserve and makes loans by credit to deposit accounts, he will have an added loaning power of $25,000, which at 6 per cent will bring him $1,500 a year, or $1,320 more than he is now getting from his reserve city agent. At the worst, then, he will be as well off as he is now, and the chances are that he will in fact make a much better profit. In addition to the profits I have already shown he will share in the profits of the regional reserve bank in proportion to his balances with that institution.

It is uncertain how much this will bring, but, whatever it may be, it represents clear gain over and above present possibilities. If it be argued that the country banker's investment in the stock of the regional reserve bank will be unprofitable, we need only stop and figure exactly how unprofitable it will be. A bank with $25,000 capital will pay in a subscription of $2,500, on which it will get 5 per cent. If money is worth 6 per cent, the annual loss is 1 per cent of $2,500, or $25, an insignificant sum in proportion to the profits which I have just shown. Yet my illustration does not do full justice to the situation, because the $25,000 bank will ordinarily have deposits considerably in excess of the $100,000 which I have assumed in my calculation. But some one may say that the loss on the stock investment will be more than 1 per cent because money in some sections is worth 7 or 8 per cent. If that is so, we must go back and figure the profit on the release of reserves on a 7 or 8 per cent basis, and we have a much stronger showing for the new system than I have made out.

There is in fact no burden placed on any national bank by this bill, and there is nothing in it that will afford a good reason for a bank to give up its national charter. On the other hand, banks which have been benefited for years by the prestige of the national charter will be loath to give that up now, and they will not fail to see that the business man will want to keep his money and secure his line of credit at a bank which is entitled to the rediscount facilities now to be afforded and which is scrutinized by a Federal examination more complete than has ever existed before. For these reasons any bank which leaves the national system will quickly be replaced by a new one coming in; and in this connection it must be remembered that new national banks can be organized in the future under less burdensome conditions than heretofore, since it is no longer required of them to make an investment in 2 per cent Government bonds, and they will be subject only to the less burdensome requirement of a smaller investment in 5 per cent Federal reserve bank stock, carrying with it facilities more valuable than those accompanying the Government bonds.

The Tariff.

The Baltimore platform pledged the Democratic Party to a reduction in the burden of taxation, to economy and simplicity, and to a lightening of the public burdens. This pledge should be faithfully fulfilled.

SPEECH
OF
HON. WARREN WORTH BAILEY,
OF PENNSYLVANIA,
IN THE HOUSE OF REPRESENTATIVES,
Tuesday, September 30, 1913,

On the conference report to the bill (H. R. 3321) to reduce tariff duties and to provide revenue for the Government, and for other purposes.

Mr. BAILEY. Mr. Speaker, in opening his speech in opposition to the conference report on the tariff bill, the distinguished gentleman from New York [Mr. PAYNE] delivered himself of a generous boast regarding the tariff law which bears his name and the death knell of which we are sounding to-day. He was particularly proud of the fact that this bill, in the 50 months which a patient people had permitted it to run, had wrung from the American consumers a surplus of more than $140,000,000. He seemed to feel that this was a proud achievement, that it reflected glory upon his party, that it vindicated his own title to statesmanship, and that this money were better in the Treasury of the United States for devotion to extravagant expenditures than in the pockets of the plain people who in toil and trouble had earned it.

It is my theory that a surplus revenue is a reproach to the party responsible for it. I do not forget the sapient remark of the late Gen. Fred Grant that a surplus is a much easier proposition to deal with than a deficit, but statesmanship should not be seeking the easy proposition when it comes to a question of dealing with the problems of taxation. Not one dollar should be taxed out of the pocket of labor unnecessarily. For this reason I rather hope that the prophecy or prediction of the gentleman from New York—that the new tariff will produce a revenue below the estimates of Mr. UNDERWOOD and Mr. SIMMONS—may be justified by the event. It is with no little concern that I have noticed an apparent purpose in the framing of this bill to provide a volume of revenue substantially equal to, if not actually in excess of, that which the Republican Party has been squeezing out of the people during its long riot of extravagance.

The total receipts of the Government from all sources in 1912 were $938,522,481. It is estimated by Chairman UNDERWOOD that the total receipts from all sources for the fiscal year 1914 will be $1,029,000,000 and for 1915 $1,026,000,000. With a total revenue of $938,522,481 for 1912 there was a surplus of $37,000,000. The estimated surplus for 1914 is $16,000,000 and for 1915 $18,000,000. It thus appears that there is to be no reduction in the volume of revenue, but an actual increase; that while taxes are to be more equitably distributed, they are to remain pretty much what they have been under Republican administration.

The expenditures in 1912 for the War Department amounted to $148,795,422. It is estimated that the Democratic administration will spend $178,000,000 on this account for 1914 and $175,000,000 for 1915. Expenditures for the Navy Department in 1912 reached the huge total of $135,591,956. It is estimated that this total will be increased to $147,000,000 for 1914 and $145,000,000 for 1915. Expenditures for pensions for 1912 were $153,590,456. The estimated expenditure on this account for 1914 is $180,000,000 and an equal amount for 1915. Thus, on account of war, past and anticipated, we are to expend no less than half a billion dollars, or about half of the entire revenue collected from the people.

Mr. Speaker, I feel like directing the attention of Democrats to what I am tempted to describe as a forgotten plank of the Baltimore platform. That plank was very much in evidence in the campaign of 1912. The changes were rung upon it by Democratic orators, and Democratic newspapers emphasized it day after day. But I am afraid that it is not receiving the consideration which it deserves. That plank was as follows:

We denounce the profligate waste of the money wrung from the people by oppressive taxation through the lavish appropriations of recent Republican Congresses, which have kept taxes high and reduced the purchasing power of the people's toil. We demand a return to that simplicity and economy which befit a democratic government and a reduction in the number of useless offices the salaries of which drain the substance of the people.

Undoubtedly there had been profligate waste of the money wrung from the people by oppressive taxation; undoubtedly recent Republican Congresses had made lavish appropriations in order to absorb and justify the excessive taxes levied upon the necessities of the consuming masses; and undoubtedly the net effect of this was to reduce the purchasing power of the people's toil. The Democratic Party assumed a great mission in undertaking the correction of this abuse. It appealed to the people for a return to that simplicity and economy which befit a democratic government; and this appeal met with a generous popular response. The people had felt the burden of taxation; they had looked with reprobation upon the profligate waste of their substance; they had rebelled against the Republican riot in extravagance. And when we pledged ourselves to set a new pattern of retrenchment and economy we were taken at our word and were intrusted with a commission from the people to redeem that pledge.

Are we keeping our word when we are proposing to raise more revenue than the Republicans ever thought of raising? Are we keeping it when we propose to spend more money than the Republicans ever dared to spend? Of course this is a big country; of course we have been extending the sphere of Federal activity; and of course all of this has entailed the necessity of increased expenditures. But I can not believe that we are justified by the size of the country, the wealth it contains, the increased Federal activities which we have witnessed and which may or may not be wise, in collecting more than a billion dollars a year from the toiling masses of this land. I am profoundly of the belief that we are spending scores of millions more on Army and Navy than can be justified on any moral or other ground. We are carrying a war burden in a time of profound peace almost equal to what would be required were we engaged in actual conflict with a powerful enemy. And no end seems to be in sight. There are the same ambitious schemes for enlarging the Navy and for increasing military "preparedness" that we witnessed under Republican auspices; and if there is anywhere any real purpose of curtailing expenditures in this direction the fact has not become apparent.

The gentleman from New York complained that the Democrats had been indulging in guesswork when they made their estimates of the revenue which the Underwood bill is expected to produce. Naturally there must be some guesswork in matters of this sort. There undoubtedly was guesswork regarding the revenue which the Payne tariff was expected to produce; there had been the same sort of guesswork as to the revenue-producing qualities of the Dingley law. No one can possibly, with certainty, foretell just what revenue will be produced by a tariff measure. But one thing can be foretold with confidence, namely, that low rates of duty will tend to produce a larger revenue than high rates of duty. In my judgment, the Underwood bill will invite an enormous increase of importations, and that in consequence the aggregate revenue will equal, if not exceed, the estimates. These importations will come in to pay for the increased exports which a freer trade will make possible. I confidently look forward to such an increase in our trade as that which followed the low tariff of 1846. Under the low rates of the Walker tariff we enjoyed a marvelous period of prosperity, a prosperity which was diffused and which affected all lines of industry, farming, mining, manufacturing, banking, merchandising, transportation. It was not a prosperity that a few only shared in. It was a prosperity that found its way

to the cottage door and not alone to the palace. That low tariff of 1846 produced not merely an abundant revenue; it produced a redundant revenue; and after it had been in effect a few years it was found necessary still further to reduce duties, and this was done without protest from any source. No party thought of demanding an increase of duties or the retention of old ones. No party thought of urging protection for our infant industries. No party dared go on record in its platform in support of any proposition looking to a reversal of the tariff policy which was inaugurated by the Democrats in 1846. The results flowing from that tariff were a complete vindication of every claim the Democrats had made; and so complete and so overwhelming was this vindication that the tariff question had actually disappeared as an issue in American politics, and there can scarcely be a doubt that it never would have reappeared as a political issue had not the War of the Rebellion opened the way for a return to the old discredited policy of protection.

That the Underwood tariff will vindicate itself as the Walker tariff was vindicated let no one doubt. The farmer, particularly, has been fooled on the subject of protection. He has been befogged and befuddled and befooled by protectionist sophistries until he has felt that he was, somehow or other, the chief beneficiary of the greatest swindle ever perpetrated upon any people. He has perhaps in a most peculiar way been befooled and befuddled in regard to the tariff on wool and its beneficial effects on the agricultural interests. Of course, he has been befooled and befuddled regarding the tariff on wheat, the tariff on corn, the tariff on hay and oats, the tariff on butter and eggs and meat; but the keystone of the arch of protectionism has been the wool tariff, and the farmer has believed that his future really depended upon its maintenance. Just how badly he has been fooled, just how completely he has been deceived, just how willfully the real truth has been distorted, I shall not undertake to say myself, but I am going to let a high authority speak. I am going to let him turn on the light. I propose to ask him to take the witness stand and testify regarding the history of wool and the wool tariff. No man of the present day has given more careful study to the tariff and to its effects upon the people, and especially to its effects upon the farmer, than Lee Francis Lybarger, who is widely known as a writer on economic subjects and as a speaker of great power. He was present during the debates on the Underwood bill in the House and he was particularly struck by the speech of the gentleman from Ohio [Mr. WILLIS]. That gifted gentleman had declared that—

whenever the duties have been below 11 cents a pound on wools of the first class flocks have always decreased. On the other hand, when duties have been as at present—11 cents a pound or higher—they have always increased.

Mr. Lybarger proceeded to inquire into the matter with his accustomed thoroughness, and I propose to give the results of his study below. He tells "The plain truth about wool" in one article; in another he deals with "Sheep: A declining industry"; in the third he treats of "The foe of sheep—the plow." The whole comprises a story so complete, so convincing, and so thoroughly impregnable that it is commended to the candid consideration of all thoughtful men who really want to be informed regarding this vital phase of the tariff question. What Mr. Lybarger has made so clear regarding wool can be made equally clear regarding every other product of the farm which the Republicans have professed to protect.

The article referred to is as follows:

PLAIN TRUTH ABOUT WOOL.

[By Lee Francis Lybarger.]

Whenever the duties have been below 11 cents a pound on wools of the first class flocks have always decreased. On the other hand, when duties have been as at present (11 cents a pound or higher) they have always increased.—Hon. FRANK B. WILLIS, of Ohio. (See CONGRESSIONAL RECORD, p. 39.)

Having shown in a recent article that the repeated reductions and declines in the number of sheep in the United States could not possibly be traced to repeated reductions in the tariff on wool, as Congressman FRANK B. WILLIS alleges, since there has been practically but one such reduction in all the years since the Civil War; and having shown, therefore, that the decline of the wool industry has occurred not only under the one Democratic tariff in 53 years of history, but also under the supposed "fostering care" of every high protective tariff the Republican Party has passed, it now remains to point out more fully the repeated declines in the number of sheep and to show that these declines are sometimes even greater under a protective tariff than they were under Democratic "free wool."

Having excepted this one and only Democratic tariff law in half a century of history, truth requires us to say that for 45 years the rate on wool has been practically unchanged. And that rate has been 10 cents a pound and 12 cents a pound on wool of the first class—merino sheep—until the McKinley Act of 1890 made a general average of the two and fixed a straight rate of 11 cents a pound on wools of the first class and 12 cents on combing wools. On washed wools the rate is doubled. On scoured wools the rate is multiplied by three. That is the tariff as it stands to-day.

Stated in its simplest form, the utterly absurd and unfounded proposition of the Hon. FRANK B. WILLIS is this: A decrease of just 1 penny on the pound will destroy the sheep industry, while an increase of only 1 cent in the tariff rate will build it up. Such a proposition is almost too absurd for serious consideration. Especially is this true when the fact is kept in mind that the price of wool often varies 5, 10, 15, 25, and even 30 cents a pound in a single year. It seldom varies less than 3 cents. Ohio wool, medium, was 12 cents a pound less in 1911 than it was in 1909, the year the Payne-Aldrich bill was passed. From 1872 to 1876 the price of this same wool declined 35 cents a pound. And yet here comes along a so-called "statesman" who declares, even in the Halls of Congress, a reduction of just 1 penny on the pound will destroy the sheep-growing industry.

Mr. WILLIS begins the "proof" of this most extraordinary proposition way back in 1867. He has taken the pains to review the wool industry under each successive tariff. Let us follow him. It is really "worth while." He tells us that during "the last 4 years" of the tariff of 1867 "the number of sheep increased 25 per cent." That is a good showing. We are willing to call it 30 per cent. In 1879 there were in the United States 38,134,000 sheep. By 1883 they had increased 11,113,000. Why deal only with "the last 4 years" of this act. It was in existence 16 years. Why were these last years more important than the first years? We think we can tell you why. It was because under the first years of the act sheep did not increase. They decreased—and at a terrific rate.

In 1867 (see Yearbook, Department of Agriculture, 1911, p. 637) there were 39,388,000 sheep. On wools of the first class, worth 32 cents or less, there was a duty of 10 cents a pound, plus 11 per cent. That was equal to a specific duty of 13 cents a pound. On wools of a higher value there was a duty of 12 cents a pound, plus 10 per cent. And that would equal a specific duty of at least 15 cents a pound, or an ad valorem duty of nearly 50 per cent. What more could the sheep ask than that? And yet in just five years they decreased 7,706,000. There were that many less, not more. Congressman WILLIS tells us that when wool is 11 cents a pound "flocks have always increased." Here was a minimum rate of 13 cents a pound. And still they did not increase. On the contrary they decreased 7,706,000—a decrease of nearly 20 per cent. Again we ask, Why did they decrease instead of increase? There had been no "tinkering" with the tariff. The rate on wool had not been reduced. It had been increased—doubled.

WHY DIDN'T HE TELL?

We would like to know why the Hon. Mr. WILLIS did not tell his constituents about this enormous slump in sheep. Perhaps it was because it occurred under a Republican tariff, the highest in our history. He called special attention to "the last 4 years," when the number of sheep had increased 30 per cent. Why was he silent when they had decreased 20 per cent—and under an increased rate? We think we know why, but will not mention it.

And now, just what are the facts in reference to these "last 4 years"? Well, the facts are really astounding—to a protectionist. They show that the tariff was not higher, but lower. Congress passed a law in 1872 which made a horizontal reduction of 10 per cent on wool. And now comes a most amazing and perplexing fact. Under the highest wool tariff in our history the number of sheep actually decreased 7,706,000; while under a 10 per cent reduction of this same tariff the number of sheep increased 11,113,000. What might they not have increased had the reduction been still greater? Nor is that all. Twelve years after the tariff of 1867 and doubled the rate on wool, there were fewer sheep in the United States than when the act was passed.

Mr. WILLIS tells us that under the Republican tariff law of 1883 the number of sheep decreased 16 per cent. And the estimate seems correct. In that year the Department of Agriculture reports 49,237,000 sheep. There were only 44,336,000 in 1890. That made a decrease of 4,901,000 sheep in seven years. Why did they decrease? What caused it? Here is the explanation which Mr. WILLIS gives: "During the last four years of the tariff of 1867 the duty on wool was 12½ cents a pound, while under the act of 1883 it was only 10 cents a pound." Our only objection to that statement is this: It is not true. The tariff was not 12½ cents a pound under that act or any other. No such rate was ever levied. Both laws contained both rates on wools of the first class—a 12-cent duty and a 10-cent duty.

How did he get those rates? He got them by changing the basis of comparison. Then he compared the highest rate under the one with the lowest rate under the other, speaking as if each law contained but the one rate. And yet, as a matter of fact, both laws contained both rates. Why, then, did this supposedly honorable gentleman mention only one rate under each? Such an act was either gross carelessness or gross criminality. Did he not intend that his constituents should infer that under the tariff of 1867 clothing wools paid 12½ cents a pound, while under the act of 1883 they paid only 10 cents a pound? And, if so, then what other purpose could he have had but to deceive the people?

The tariff of 1883 did just two things—it took off the additional ad valorem duty of 10 per cent on one grade of first-class wools and 11 per cent on the other. That was a reduction. Second, it reduced the minimum of the wool that should bear a 12 per cent duty, reducing it from 32 cents to 30. And that was an increase. For instance, under the act of 1867 wool worth 31 cents a pound paid a duty of 10 cents a pound. Under the act of 1883 it paid a duty of 12 cents a pound, and so the act of 1883 made practically no reduction in the tariff on wool. It could scarcely have exceeded a quarter of a cent a pound. And yet Congressman WILLIS tells us that sheep declined, and that they declined 16 per cent. Their number decreased by 4,901,000. What caused it?

It could not have been caused by the tariff. Mr. WILLIS sought by changing the basis of comparison to give the impression that there was a reduction of 2½ cents a pound. We have shown that if there was any reduction at all it could not have been half this amount, or even one-fourth of it. Furthermore, if we granted the whole of his false and fraudulent claim, it could not possibly have caused this decline. We enter this period with the price of Ohio fleece, medium, at 45 cents a pound. During the period it dropped as low as 31 cents. Could a tariff reduction of 2½ cents a pound cause a price reduction of 14 cents? And what shall we say of the intelligence of men who do such reasoning as this? If they do not know better, then they are mentally incapable. If they do know better, then they are morally incapable. Think of it! A reduction of 2½ cents in the tariff on wool—which never occurred—caused a decline in the price of wool of 15 cents!

Let us pass on. Mr. WILLIS tells us that the McKinley tariff made a straight rate of 11 cents a pound on wool, which it did, and that as a result "the number of sheep increased 10 per cent." His joy at finding sheep increase once more carried him beyond the facts. There were 44,336,000 sheep in 1890. There were only 712,000 more in 1894. And that, we submit, does not make an increase of 10 per cent. It is even less than 2 per cent. That is not so much. We have seen sheep increase 30 per cent after the tariff had been reduced. We have seen them decrease 20 per cent after the tariff had been doubled—and under the highest wool tariff in our history. And so Mr. WILLIS was lucky to get off with an increase of even 1.6 per cent. So far as the tariff has anything to do with the sheep industry, the law would seem to be: To increase the tariff decreases the sheep; to decrease the tariff increases the sheep.

WHAT THE M'KINLEY TARIFF DID TO SHEEP.

And so when the McKinley tariff struck a general average between the 10-cent and 12-cent rates, calling it 11 cents a pound, it must have reduced the previous rate, judging from the past. This much was certain: It reduced the sheep. The first year following the passage of the McKinley bill saw the number of sheep decrease 905,000. And the fourth year under this tariff saw a decrease of 2,226,000. It probably took the sheep some time to get used to the new rate. They had to become acclimated. In fact, they never did get used to it. They kept right on going down, even after the law had been repealed. And when later on its duties were restored and the sheep seemed to be standing it all right they suddenly started in on a worse decline than ever.

Forty-five years of high protection have established the fact that, whatever may be a good thing for sheep, a protective tariff is not. The sheep discovered that long ago. But Congressman WILLIS has not. However, it is worth while to notice that while a sheep has wool on its back it has none over its eyes. And that is more than we can say for him.

Mr. WILLIS tells us that the Democratic tariff of 1894 put wool on the free list, which it did, and that as a result sheep declined 21 per cent. We insist that it was only 18 per cent—not so much of a decline as when the act of 1867 doubled the rate. There were 45,048,000 sheep in 1894; there were only 36,819,000 in 1897, a decrease of 8,229,000. But where is the proof that it was caused by reducing the tariff? Where is the proof that they would not have decreased had wool not been placed on the free list? They began the decrease the last year of the McKinley tariff and decreased over 2,000,000 the year before the act was passed.

We have seen sheep decline when the tariff was raised. We have seen them decline when the tariff was lowered. We have seen them decline when the tariff was unchanged. The whole truth seems to be that the sheep industry in the United States is in the "declining" business. Civilization is against the sheep.

Practically every Republican and Progressive speaker in the recent congressional debate called attention to the fact that the sheep declined under a Democratic tariff. We admit it. And while we are sorry for it, yet we are glad to have a protectionist speaker get even one fact. We also admit that it is "unusual" for sheep to decrease. They had not decreased more than twenty times before the Democrats put wool on the free list.

Strange, however, that none of them called attention to the fact that they had decreased 7,706,000 under the tariff of 1867; that they decreased 905,000 the first year after the enactment of the McKinley bill; that the last year under that tariff saw a decrease of 2,226,000; and that in the last two years they have decreased under the Payne-Aldrich tariff 4,854,000; while from 1903 to 1905 the number of sheep decreased 18,796,000 under the Dingley Tariff Act and 4,854,000 in the last two years under the Payne-Aldrich tariff. They did not forget to mention the fact that Ohio fleece, medium, declined 3 cents on the pound when wool was on the free list, but they did forget to mention that it declined 14 cents a pound under the McKinley tariff.

Here, then, is a most extraordinary fact. A reduction of 11 cents a pound on wool seems a reduction of only 3 cents a pound in the price of wool, while an increase in the tariff rate, made by the McKinley bill, is followed by a reduction of 14 cents on the pound. Why did not these protectionist speakers mention these great facts? And how can their constituents depend upon them for reliable information when they forget to mention truths of such significance as these? They also forgot to mention the fact that the price of wool declined 10 cents a pound under the Payne-Aldrich tariff and 35 cents a pound under the tariff of 1867.

But why should men who are fighting for a falsehood, fighting for a colossal lie, fighting for the most gigantic superstition and delusion that ever was imposed on the credulity of the human race—the delusion that a people can be enriched by voluntarily taxing themselves—why should they be expected to mention such facts as these, especially when such facts knock their whole theory into atoms?

—

SHEEP—A DECLINING INDUSTRY.

[By Lee Francis Lybarger.]

Sheep growing—for the primary purpose of producing wool, with mutton as only a by-product—is a declining industry in the United States. The forces of civilization are against it. The same story has been repeated in every land and under every civilization. We have already shown that the tariff can not maintain it. And even if it could, it would do so at an economic loss to the country. But this is not a matter for alarm or even of regret. The decline of an industry, through the advance of civilization, does not mean a decline in the production of wealth. The very reverse is true. It simply means that the pressure of population has developed a more profitable use of land.

We have shown that the number of sheep has repeatedly increased after the tariff had been lowered. We have shown that their number has repeatedly decreased after the tariff had been raised. To quote but two instances, we saw them decline 18,795,000 under the Dingley tariff, which took wool off the free list, and we saw them increase 11,113,000 after the act of 1872 had reduced the tariff by 10 per cent. And yet, with the exception of three years, when the Democrats put wool on the free list that for 45 years tariff on wool remained practically unchanged. And in reference to those three "Democratic years" it must be said that neither the decline in the number of sheep nor the price of wool was as great as under the McKinley tariff. And so it has not been for lack of "protection" that the sheep industry has declined.

Twelve years after the act of 1867 had doubled the tariff on wool found fewer sheep in the country than when the act was passed. There were more than 18,000,000 fewer sheep in 1905 than in 1903. There was 4,854,000 fewer sheep in 1912 than in 1910. And after a lapse of 30 years the averages for the 5 years ending in 1900 showed fewer sheep than for the four years ending in 1870. During that time the population had doubled. What hope, then, for the sheep industry? While there have been many slumps in the sheep industry, yet the whole period shows an actual increase in the number of sheep. But that increase had not kept pace with the increase of population. Let us take the average per year for the four years ending in 1870 for the basis and divide the rest of the time into five-year periods. The average for the first period shows 39,238,000 sheep. Giving only the even millions, the number of sheep for the successive periods are as follows: 33, 37, 38, 45, 44, 39, 55, 54; and for the years 1911–12, 53,000,000. The high-water mark in the production of sheep was in 1903, when their number rose to nearly 64,000,000. Two years later they had actually decreased by over 18,000,000. Then their number rose to 57,216,000 in 1910. Since then they have been steadily declining. The period ending in 1900 shows fewer sheep than the one ending in 1870. There were just 12,977,000 more sheep in 1912 than in 1867.

While there has been a slight increase in the actual number of sheep, there has been also a relative decrease—relative to population. The population in 1867 was 36,211,000. The number of sheep was 39,385,000. At that time there were more sheep than people. There was a fraction over 1 sheep for each inhabitant—about 1.08. In 1912 there were 52,362,000 sheep and 95,000,000 people. And so after 45 years of "protection" there are only about half as many sheep as there are people. An equal division of sheep now would give only 0.55 of a sheep for each inhabitant. In other words, sheep have declined one-half relative to population. While the number of sheep has increased 40 per cent, the population has increased 103 per cent. While the number of sheep has increased 40 per cent, the population has increased 162 per cent. In other words, while the number of sheep has been multiplied by 1.4, the population has been multiplied by 2.9. And so the increase in the number of sheep falls far short of keeping pace with the increase in the number of people.

We shall find the same startling facts if we compare the increase in the number of sheep with the increase in other farm animals. In 1867 there were 9,096,000 milch cows in this country. They had increased to 21,268,000 by 1912. That is an increase of 133 per cent. Hogs had increased during this same period from 24,769,000 to 58,241,000—an increase of 135 per cent. And so while hogs and cows have not kept pace with population, they have increased nearly 3 times faster than sheep. Horses increased from 6,232,000 to 20,766,000—an increase of 220 per cent. And so horses have increased 5 times faster than sheep. Let us take the case of cattle. They have increased from 12,786,000 to 43,399,000—an increase of 240 per cent. They have increased 6 times faster than sheep. The case with reference to mules is still stronger. During the past 45 years their number has increased from 945,000 to 4,215,000. That makes an increase of 445 per cent. And so mules have increased 11 times faster than sheep and 2 times faster than people.

How stands the case with reference to the price of wool? In spite of a protective tariff on wool that often approaches 50 per cent, yet from 1872 to 1896 the price of wool speedily declined the same as did the price of all other products of farm and factory. The average price of wool for the 4 years ending in 1867 was 47 cents a pound. Taking this as the basis and following in 5-year periods, the successive prices were as follows: 56, 40, 39, 30, 27, 27, 31, 37, and for 1911–12, 32 cents. That is not the farm price, but the retail price. The farm price runs about 6 cents lower. Judging from the delusive arguments of protectionists, one would infer that the Wilson bill was passed in 1872 and had been in existence ever since. In the whole catalogue of error, where is there any more utterly without foundation in logic or fact than the one which declares that a protective tariff benefits the American farmer?

—

THE FOE OF SHEEP—THE PLOW.

[By Lee Francis Lybarger.]

There is a fact bearing on the sheep-growing industry that is mightier than the tariff. It is the fact of civilization. It is the fact of progress. It is the fact of the advance of human society from the pastoral stage into the agricultural stage. And so the foe of the sheep is not the tariff, but the plow.

Sheep raising is one of the most ancient of human industries. It dates back in history when mankind lived by "following flocks and herds." We read about this ancient industry in the Bible in connection with "those that dwelt in tents." It had its origin in the dim dawn of time as mankind was emerging from savagery into barbarism.

Under savagery mankind lived directly from nature as hunters, fishermen, etc. The club and spear were their first implements. These were used not only in their warfare with fellow human beings, but also with wild animals. Not only food but clothing and even shelter depended upon the fortunes of the chase. The walls and doors of the wigwam were furnished with the skins and furs of savage beasts.

Gradually there came the idea of the domestication of wild animals. They were to be made to do the will and supply the wants of the human race. And among the earliest of domestic animals was the sheep. It furnished food and drink and clothing and even shelter. Great have been the contributions which the wool and meat and milk of the sheep have made to mankind. The memories of the herdsman's life hover about all our ancient traditions. They came from all climes and races—the black, the brown, the white. Countless were the contests and struggles to get possession of the best pasture lands. And this gradual transition from hunting to herding marks the advance from savagery into barbarism, and it was a mighty step forward.

The third stage of development brought agriculture, and with this came civilization. Gradually there developed the idea of planting seeds, of cultivating the ground, and of domesticating trees and plants. The basis of agriculture is the plow. The plow and the pen are the mighty factors of civilization. However, herding long continued side by side with farming and fruit raising. Domestic animals still depended upon wild grasses and so required herding. Nor had the avocation of the hunter entirely ceased. But with the idea of constructing so common a thing as a fence and the production of food not only for people, but also for domestic animals, still greater changes followed. There was another advance toward freedom from an immediate and slavish dependence upon the vicissitudes of nature. And this advanced step—in which food was grown not only for people, but for domestic animals—marks a tragic fact in the future destiny of the sheep.

History shows that while it remained profitable to support the horse and the cow and the pig with the plow, it was not profitable thus to support the sheep. Thus were sheep, seemingly by an edict of nature, excluded from the advance of civilization and confined largely to pastoral lands and peoples. The sheep and the plow were not to travel together like the other domestic animals. There seemed a direct and deadly conflict between them in an effort to get possession of the fields. And so it has developed, through centuries of this struggle, that it is not profitable to preserve plowlands for sheep lands. The plow represents a higher use of land, a more intensive cultivation.

Fate has thus decreed that sheep are to occupy only such lands as are not arable—plowable. The story told in every land and in the development of every nation is this: Sheep have always preceded the plow, and the plow has ever driven them relentlessly onward, onward toward the hills, the mountains, the arid plains, and the deserts. They always follow the pioneer into new worlds. They tend ever to be confined with him on the fringes of civilization. And with him are driven ever onward toward the pacific—the pacific of oblivion. Just as the industry of the plowman drives out that of the hunter and the woodsman, so does the plow drive out the sheep.

And so, only permanent abiding places for the sheep are those which the plow can not enter. There they have remained for centuries and will ever remain. But to devote arable lands to this industry and in competition with those which have no other uses is to violate a fundamental law of political ecoomy and devote a portion of the earth to a low-grade production when it is capable of a higher and more profitable production.

The part which sheep play in the great drama of civilization is that of the "curtain riser." And they have played their historic part in this country. They are the pioneer scavengers. They clean out the fence corners and sprout the stumps. They help the woodsmen to prepare the ground for the plow. And then when the plow comes, the fields that once knew them knows them no more. They move onward into the open, unfenced plains and the uncleared forests. In those sections which the plow can not reach they will remain. But from those sections which it can reach they will be slowly but surely driven out, never again to return.

But in presenting this historic drama of the function and fate of the sheep we are considering it wholly from the standpoint of being a producer of wool, with mutton as only a by-product. The growing of wool belongs "to the desert and waste places of the earth." But when we reverse the purpose of sheep raising and make mutton the primary thing and wool as a by-product, then opposite results will follow. It is profitable to support meat-producing animals with the plow. And so, when the transition is made from wool sheep—that is, sheep of merino strain—to mutton sheep, the antagonism between the sheep and the plow will disappear. Food supplies will be enormously increased. The quantity of wool produced will be nearly as great, perhaps greater. Here, then, lies the hope, and the only hope, of a declining industry. The tariff can not save it.

It must conform to the requirements of civilized life or go the way of all the ancient industries.

The Tariff Conference Report—Pure Sweet Wines v. Skin or Pomace Wines.

EXTENSION OF REMARKS
OF
HON. JULIUS KAHN,
OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, September 30, 1913,

On the conference report to the bill (H. R. 3321) to reduce tariff duties and to provide revenue for the Government, and for other purposes.

Mr. KAHN. Mr. Speaker, I would not ordinarily have participated in this discussion, because the ground of opposition to this conference report has been fully covered by the gentleman from New York [Mr. PAYNE] and others on the Republican side. As my views are in accord with theirs, there is no need to reiterate them. But I want to commend the conferees on the part of the House for having so strongly stood out against agreeing to the Senate amendment known as the "Pomerene amendment," which proposed to tax grape brandy used in the fortification of sweet wines at the rate of $1.10 per proof gallon. The enactment of that amendment would have struck a vital blow at the sweet-wine industry of California.

The State of California produces about 20,000,000 gallons of sweet wines per year. The production has stood at that figure, approximately, during the entire decade between 1902 and 1912. There has been no appreciable increase in the production in that State in all those years. Why? Because since 1906 no large wine-making concern has declared more than one dividend, while many vineyardists and producers have been forced out of business by unfavorable conditions. The capital stock of the various companies manufacturing sweet wines has never been at par since 1906, and the value of the capital stock of some of the larger companies has depreciated as much as 50 per cent. This fact can be shown by the quotations of the San Francisco Stock & Bond Exchange. About 250,000 acres of land in California are cultivated to the grape. There are over 15,000 farmers in California engaged in grape growing and wine production. Over $100,000,000 is invested in the industry.

The addition of grape brandy to sweet wines is absolutely essential for their preservation. The sweet wines include such well-known types as port, sherry, Madeira, Angelica, muscatel, and Tokay. The wine growers of every country in the world use grape brandy to fortify sweet wines. But there is not a country in the world that imposes a tax upon grape brandy used in the preservation and perfection of sweet wines.

Much of the sweet wine that is made in California is retailed through drug stores for medicinal purposes and on prescriptions of physicians. The imposition of a tax of $1.10 per proof gallon would greatly increase the cost of these wines to the consumers of the country.

This entire subject has been stirred up by the Ohio wine makers, who for years have "skinned" the wine consumers of the United States by selling "skin" wine, or pomace wine, as it is known to the trade, to the American people. There is only one country in the world, other than the United States, that permits the manufacture of this "skin" wine. That country is France. But the laws of France do not permit it to be sold except for export to foreign countries or for domestic use at the identical winery where it is manufactured.

The formula, as announced by one of the manufacturers of this "skin" wine, is approximately as follows:

Take 1,250 pounds of sugar, 650 gallons of water, and 450 pounds of grape skins from which the juice has been pressed and allow the mixture to ferment. When partially fermented add a little benzoate of soda as a preservative and serve as wine.

I am told that under the pure-food law the makers of this pomace or "skin" wine are compelled to designate the amount of benzoate of soda used for preserving purposes on the original package that leaves their factories. Of course, this original package is the barrel in which this spurious wine is contained. When the barrel reaches the customer the latter decants it into bottles and the fact that it has been preserved with benzoate of soda is not put upon the label of the bottle, so that the customer is in very truth "skinned" when he buys this "skin" decoction for pure wine.

If the law allowing free use of pure grape brandy for the preservation of pure sweet wines were to be repealed, as proposed in the Pomerene amendment, the impetus given to the manufacture of imitation or "skin" wines would be sufficient to drive the manufacturer of pure sweet wines out of business. It has been asserted that there are 107 makers of sweet wine who derive all the benefit of the existing law. But there are 15,000 heads of families engaged in growing the grapes that are sold to these wine makers in California aloue. Ninety-six per cent of the sweet wine makers have their wineries in the State of California. But sweet wine is also made in the States of New York, New Jersey, North Carolina, Virginia, Alabama, and in the Territory of Hawaii. The makers of sweet wines in these States all receive the benefits conferred under the laws which allow the use of grape brandy for the fortification of sweet wines upon the payment of a charge of 3 cents per gallon. The only two States in the Union that make wines and do not avail themselves of this law are the States of Ohio and Missouri. It is in these two States that most of this pomace or "skin" wine is made.

While the California wine maker has to pay the farmers who raise the grapes $10 and $12 per ton, the Ohio and Missouri makers of this "skin" wine buy the skins at $3 per ton, and under their formula they can keep using the skins a number of times and turn out several vintages out of one set of skins.

They claim that Germany allows the addition of water and sugar in the manufacture of German wines. That is a half truth. The fact is the normal quantity of sugar contained in the grapes in the various wine-growing districts of Germany is well known to the wine producers. The quantity of the sugar in the grape varies in the different districts, and, naturally, it has an important bearing on the flavor of the wine. Some years the quantity of sugar contained in the grape in some of the districts is a little less than normal. Under the German law the wine maker is permitted to add a sufficient amount of sugar to bring the quantity contained in the natural juice of the grape, or the "must," as it is called, to the normal standard. The addition of this sugar is made under the supervision of a government official and is not allowed to exceed the normal amount found in the grape of the particular district in which the particular brand of wine is made. In other words, the amount of sugar contained in such famous brands as Liebfraumilch, Johannisthaler, Affenthaler, Rudesheimer, and so forth, is well known to the German wine experts. In abnormal years, when there is a deficiency of sugar in the grapes, the Government allows the addition of a sufficient amount of sugar to bring the grape juice to the normal standard, but not a pound more.

That is a far different proposition than the one that prevails in the States of Ohio and Missouri, where these "skin" wines are made and sold to the American people as pure wine. To call such stuff pure wine is a perversion of the English language.

To be sure, nature has been very lavish in the quantity of sweetness contained in California grapes. There is always an abundance of sugar. But all California wine is made from the pure juice of the grape. The wine consumers of America are not "skinned" by the wine makers of that State. The skins, which would be used by the wine makers of Ohio and Missouri to make pomace or "skin" wine, are thrown away in California. They are not utilized for any such purpose. They are spread upon the land as a fertilizer. And it is small wonder that these makers of these spurious products have sought to tax the producers of pure sweet wine in the other wine-producing States of the Union out of existence.

Our Government for over 10 years has been endeavoring to give the people of this country pure food and drugs. The proposed Pomerene amendment is a distinct reactionary step. It would enable spurious wines made out of grape skins, sugar, and water to drive out of the market the pure grape wines made in California, New York, New Jersey, North Carolina, Virginia, Alabama, and the Territory of Hawaii.

As a matter of fact, the sweet-wine law of 1890 was the first pure-food law enacted in the United States. Up to the present time it has withstood every attack directed against it by the manufacturers of "skin" or pomace wines.

The Pomerene amendment as originally drawn allowed whisky, rum, or any other kind of alcohol to be used in the fortification of sweet wines. It is my belief that wine made out of the pure juice of the grape should not be allowed to become blended with a foreign substance made from grain, molasses, or vegetables, or even with benzoate of soda. To permit such a blending, in my judgment, is an imposition upon the consumers of this country. This "skin" or pomace wine can be produced so cheaply that unless some remedial legislation be enacted it will ultimately drive from the markets of the United States the pure wines produced in all the wine-producing sections of the United States where the pure juice of the grape is allowed to ferment and thus become wine.

The effort of the manufacturers of this "skin" wine to further "skin" the American people has been frustrated through the action of the House conferees on the pending tariff bill. We of California deeply appreciate the firm stand they took in refusing to concur in the Pomerene amendment. Pure wines have won a signal victory. The efforts of the makers of "skin" wines to tax the makers of pure sweet wines out of existence did not avail. While at first it seemed to be a most serious performance, it eventually turned out to be a mere farce and a fitting title would be "The Skinners Skinned; or Hoist by Their Own Petard."

APPENDIX.

EXHIBIT A.

UNITED STATES DEPARTMENT OF AGRICULTURE.
OFFICE OF INFORMATION.

PRODUCTS OF OHIO WINE FIRMS RECENTLY SEIZED IN FIVE OTHER STATES. Goods were all shipped from Sandusky, Ohio.

WASHINGTON, D. C., *September 2, 1913.*

Agents of the Department of Agriculture have just reported the following seizures of products of the Sweet Valley Wine Co., of Sandusky, Ohio:

August 13: Two barrels labeled "Scuppernong Bouquet Wine" and three barrels labeled "A Ohio Scuppernong Wine." Seizure made at Detroit, Mich.

August 14: Two barrels labeled "A Ohio Scuppernong Wine." Seizure made at St. Louis, Mo.

August 15: Two cases labeled "Scuppernong Bouquet Wine." Seizure made at Chicago, Ill.

August 15: Seven cases labeled "Scuppernong Bouquet Wine." Seizure made at Hannibal, Mo.

August 16: Fifty-four quarts labeled "Scuppernong Bouquet Wine." Manufactured by the Sweet Valley Wine Co. and shipped by the Bay View Wine Co. Seizure made at Montgomery, Ala.

Another Ohio wine firm whose products have been recently seized is the A. Schmidt, jr., & Bros. Wine Co., of Sandusky, Ohio. The seizures are as follows:

August 13: One barrel labeled "A Scuppernong Type Wine, Ohio Product." Seizure made at Pittsburgh, Pa.

August 14: Three hundred barrels labeled "Scuppernong Type Wine, Ohio Product." Seizure made at St. Louis, Mo.

Adulteration and misbranding were charged in all these cases against both firms, because the product was labeled either "Scuppernong Wine" or "Scuppernong Type Wine," when in fact it was a base wine or imitation "Scuppernong Wine."

A. Textor & Co., also of Sandusky, Ohio, shipped a barrel labeled "Muscatel Wine" into Michigan, where it was seized on August 15. Adulteration and misbranding were charged because it was alleged that the wine was artificially sweetened in imitation of the true Muscatel type.

Cases against theses three Ohio wine shippers are now pending in the courts, where they will be prosecuted by the United States Government.

EXHIBIT B.

CONDENSED ARGUMENT OF CALIFORNIA GRAPE GROWERS AND WINE MAKERS AGAINST SECTION 25½—SWEET-WINE AMENDMENT—TARIFF BILL.

There are three features of the above amendment which we earnestly protest against:

(1) The use of sugar and water.
(2) The use of neutral alcohol.
(3) The imposition of a $1.10 tax on the wine spirits used in fortifying pure sweet wines.

(1) THE USE OF SUGAR AND WATER.

(a) According to the standards of purity for food products promulgated by the Secretary of Agriculture on June 26, 1906, wine is defined to be—

"The product made by the normal fermentation of the juice of sound, ripe grapes, and the usual cellar treatment."

We contend that this definition conforms to the immemorial definitions of wine and that no other product is entitled to be called wine.

(b) The provision of the bill permitting sugar and water to be used is in contravention of both the letter and the spirit of our pure-food laws.

(c) Under this provision, the grapes, plus water and sugar, may be fermented absolutely dry; that is, until all of the natural sugar of the grape and the added sugar have been fermented into alcohol. The resulting product they call dry wine. Then this so-called dry wine they convert into fortified sweet wine by the addition of more sugar and alcohol, which product is obviously a "sweetened" and not a "sweet" wine.

(d) Every pound of sugar can be fermented into a pound of proof alcohol, thus substituting for the natural wine spirits an alcohol created artificially by the fermentation of added sugar.

(e) If any considerable amount of sugar and water is allowed to be used it inevitably results that the pure grape juice will occupy only a subordinate place in such wine making.

(f) The use of sugar and water must be placed under the supervision of the Internal-Revenue Department; otherwise gross abuses are bound to occur by the "stretching" of the wines.

(g) The consumer of wines is entitled to know the real character of the wines, and hence adequate provisions must be made for properly branding or labeling any product not made exclusively from the juice of the grape.

(h) Pure wines made exclusively from the juice of the grape must be protected against imitation, modified, or artificial wines, the same as all other pure-food products.

(i) Over 90 per cent of the wines of America are produced in California, and made exclusively from the juice of the grape; if the use of sugar and water be legalized, this is bound to lower the standards of these wines to the level of base products.

(j) In California we make wine from wine grapes exclusively, the stocks being imported from Europe, about 160 gallons of pure dry wine or 80 gallons of pure sweet wine being produced from 1 ton of grapes; while east of the Rockies the grapes are native or indigenous, adapted more for table purposes than for wine.

(k) Eastern grapes sell for about three times as much as California grapes, due to their local demand for table purposes, and eastern wine makers, desiring to obtain as many gallons as possible from each ton of grapes, crush the grapes and draw off two-thirds of the juice for unfermented grape juice, champagne, or wine, and then they take the skins, which carry the coloring matter and the acid that lies close to the skin, and proceed to "ameliorate" this by adding large quantities of sugar and water. By this process they obtain many times as much "wine" from 1 ton of grapes as we do in California.

(2) THE USE OF NEUTRAL ALCOHOL.

(a) Neutral alcohol or neutral spirits can be very cheaply produced from potatoes, corn, molasses, beets, pineapple, and cannery refuse, or from any vegetable or fruit containing sugar or starch, and also from sawdust, shavings, etc.

(b) Even though neutral spirits may not be deleterious to health, their addition to wine (the pure juice of the grape) should not be permitted unless the resulting product be branded or labeled as a compound, in order that it may conform to the definitions contained in the United States Pharmacopœia, which is made a part of the pure-food law of 1906.

(c) Ninety-six per cent of the fortified sweet wines of America are made in California with grape brandy; hence these wines are pure sweet wines as defined in paragraph 5, schedule 3, F, beverages, standards of purity for food products, above referred to. If the use of neutral spirits is permitted upon the same terms as wine spirits, the competition in sweet wines will naturally lead to the use of neutral spirits in California sweet wines in the place of pure wine spirits, for neutral spirits can be produced in California for one-half the cost of grape brandy; and, therefore, not only will the purity of sweet wines suffer from the use of neutral spirits, but $1,500,000 of grapes that are now sold to the distilleries in California will be without a market and left to rot on the vines. Every branch of viticulture will be seriously affected, including the table-grape and raisin-grape industry, one-third of these latter crops being sent to the distillery.

(See protest and brief, pp. 84-88, hearings before subcommittee of the Committee on Finance, United States Senate.)

(3) TAX ON WINE SPIRITS.

(a) In the protest and brief, just mentioned above, we have set out at length the reasons why the law of 1890 allowing tax-free wine spirits to be used in fortifying pure sweet wines should not be disturbed.

(b) The imposition of a tax on wine spirits used in fortifying pure sweet wines will be destructive of the sweet-wine industry in California, which has grown since 1890 from about 1,000,000 gallons to 17,000,000 gallons per annum. Tens of thousands of acres have been planted by reason of the encouragement that was given to sweet wines by the law of 1890. These vineyards have been largely planted in the Sacramento and San Joaquin Valleys, where the large amount of sugar in the grapes fit them peculiarly for sweet-wine purposes. A large proportion of these grapes can not be made into dry wine on account of the sugar they contain. Moreover, if they be made into dry wines, they would glut the dry-wine market, thus causing a great depreciation of prices for dry wines and a consequent loss to the vineyardists in the dry-wine section of the State.

(c) The independent wine makers of California will not be able to finance such a tax, which simply means that the sweet-wine making of that State will probably pass into the hands of one or two powerful concerns. The 15,000 families now raising grapes in California are largely dependent upon the independent wine makers for a living price for their grapes, and any blow that is struck at these wine makers will bring ruin and disaster to the vineyardists.

(d) If any tax is imposed on wine spirits used for fortifying purposes, then justice will demand that an equivalent tax be placed upon all sugar added to wine. Eight and one-half pounds sugar will produce 1 gallon of proof alcohol, and therefore every pound of sugar so used must bear a tax in proportion to the tax placed on wine spirits.

For instance, if wine spirits are to be taxed $1.10 per gallon, then the sugar added to wine should pay a tax of 13 cents per pound, and such use of sugar should be under strict regulations and supervision of the internal-revenue department.

(c) The law of 1890, permitting the use of tax-free wine spirits in the fortification of sweet wines, has always been available to all wine makers of America upon equal terms. The eastern wine makers, if they do not choose to use their high-priced table grapes for brandy purposes, can always obtain in the future, as they have in the past, an ample supply of sweet wine spirits from California at a small margin of manufacturer's profit. Some of the reasons why the eastern wine makers of fortified sweet wines have not always used tax-free wine spirits are because (a) upon the crushing of their grapes they add both sugar and water in excess of that permitted by the 1890 law, and (b) they first make a dry wine in the above manner, and then sweeten it with more sugar, and the Government does not furnish a tax-free brandy to anybody to fortify either dry wine or sugar and water; hence by their own adopted methods they preclude themselves from using tax-free spirits. It is the methods of wine making which they elect to pursue and not any inequality in the law itself that is at fault, and therefore they should not be heard to complain against the provisions of a law that is manifestly intended to encourage the making of pure sweet wine.

REVENUE.

The Senate amendment will not raise any considerable revenue. We have clearly demonstrated this in the protest and brief above referred to. If all the spirits used for fortifying purposes be taxed at $1.10 per proof gallon, and the use of any material amount of sugar be authorized, the average amount of spirits used for fortifying such gallon of wine will not exceed 4½ per cent. There are about 17,000,000 gallons of fortified sweet wine made in this country each year. Multiplying this by 4½ per cent, we have 765,000 gallons of spirits, which, figured at the rate of $1.10 per gallon, will yield a gross revenue of only $841,500.

It must be apparent that it is impossible to levy a tax upon wine spirits without at the same time enacting a pure-wine law. It is neither fair nor just to tax wine spirits without imposing a greater tax upon compound, ameliorated, and imitation wines. This means, therefore, that the measure must be exact in its definitions of the various kinds of wines, placing larger burdens on any wines not made exclusively from the juice of the grape, and carrying ample provisions for labeling and branding the same, and particularly providing that all substances or ingredients that may be added to the juice of the grape shall be under strict regulation and supervision of the Internal-Revenue Department. In order to draw a measure that will be just to all concerned, including the consuming public, careful studies and investigations of wine making and grape growing in the different sections of our country should be made, for without such data and information mistakes are bound to be made, to the great detriment and injury of our foremost industries.

We respectfully urge that before any tax is placed upon wine spirits or any other ingredients added to wines some means be provided for a thorough investigation of viticultural conditions in America, with ample time and opportunity given to those who may be selected to conduct such investigations.

Respectfully submitted.

The Banking and Currency Bill.

The business men of the country must rejoice at the prospect of their credits being no longer periodically curtailed by local commercial crises; the wage earners must rejoice at the prospect of steady employment with no shutdowns on account of impaired credits of those for whom they work; and the farmers must rejoice at the prospect of being able to obtain currency on their crops at a reasonable rate of interest.

EXTENSION OF REMARKS
OF
HON. LATHROP BROWN,
OF NEW YORK,
IN THE HOUSE OF REPRESENTATIVES,
Monday, September 29, 1913,

On the bill (H. R. 7837) to provide for the establishment of Federal reserve banks, for furnishing an elastic currency, affording means of rediscounting commercial paper, and to establish a more effective supervision of banking in the United States, and for other purposes.

Mr. BROWN of New York. Mr. Speaker, I feel called on to make a few remarks on the currency bill, notwithstanding the many admirable speeches made on the subject, because of a mistake made by one of the clerks of the House in recording my vote on the "gold amendment." I was recorded as voting against the amendment, although I was paired "for" on this vote and the final vote on the Glass bill with Mr. SMITH of Idaho, who was "against" the bill, as the RECORD clearly shows. Of course the RECORD was corrected at the first opportunity, and a note sent explaining the circumstances to the newspapers, who had in good faith commented rather strongly on what they termed my free-silver vote. The corrections were made in the newspapers in the usual way—where nobody would see them—and tended not in the least to still the clamor raised in first-column editorials a few days before.

The defects of our present currency system have frequently been pointed out of late, and now that the Glass bill has passed the House it would seem more fitting to look toward its probable effects than to the mistaken legislation which created the necessity for this or some similar bill. I will state that I am a strong advocate of the Glass bill just passed by the House of Representatives, and wish it a speedy journey to the White House for signature. I am glad that the gold amendment was added, because, although gold is the recognized monetary standard not only of this country but of the whole Christian world, yet some fearful persons require that assurance should be made doubly sure. It does no harm to repeat a well-known truth, and often makes people happy.

Members of the committee in charge of preparing this bill had a stupendous task confronting them. Their problem was in one sense more difficult than that of the Ways and Means Committee in writing the tariff bill, because all Democrats in the House were agreed that tariff duties generally should come down, and the question was only on the amount of reduction on the 4,000 articles covered by the bill. The members of the Banking and Currency Committee, however, found several divergent points of view in approaching the subject, viewpoints honestly held and ably argued both in committee and in the Democratic caucus. Members from the cotton-growing States, in which cotton-warehouse receipts had for years been their best and most easily negotiable security, insisted that such receipts be made sufficient security when deposited, for the issuance of Federal reserve notes. Members from the corn and wheat growing States took the same stand with regard to currency based on their warehouse receipts. Members from agricultural communities, comprising chiefly prosperous farmers, who by scientific methods of soil culture are almost certain, barring extraordinary climatic conditions, of a paying crop each year, insisted that there was no security equal to that of a farm mortgage. Their constituents have no occasion to borrow money for any other purpose than to improve their farms, and under the present law national banks may not loan on farm mortgages. Consequently the farmers are deprived of the use of one of the chief lending sources, the national banks; and from their point of view, knowing little and caring little about commercial banking, they feel properly aggrieved at what to them appears discrimination. It is hard to convince a man who knows that what he has to offer is good security, that this same security is not proper security on which to issue Government notes.

I have mentioned a few local objections hurled into the maelstrom of congressional opinion in order that the commercial borrowers and lenders of the East and North may understand the viewpoint of the agricultural borrowers of the South and West.

Underlying all argument was the failure to understand that money travels with the speed of the telegraph from Frisco to London, from New York to Shanghai, where a better opportunity for investment in recognized paper or acceptances presents itself. Many Members could not or would not understand that money from the interior of this country flows to the money centers for this chief and main reason only, that there is use for that money in these centers while there is no use for it at home. Other Members maintain that certain financiers in New York were wholly responsible for the panic of 1907; that New York is a den of financial iniquity; that an active market in stock and bond securities is to be condemned, although an active market in cotton, wheat, and corn is eminently to be desired.

But underneath all the surface differences of opinion was this general feeling, as I see it: We are a new country; we need not only our own capital but European capital as well; we see in Europe how a system of rediscounts keeps capital available for use instead of locking it up; we see a market for discounts and acceptances which attracts capital as readily from London to Berlin as from Berlin to Paris; and the Glass bill is the great compromise measure for the good of the whole country. Although the acceptance method is only permitted in the case of exports and imports, I have no doubt that in the course of a few years this method will be generally extended, as it now is in Europe. I believe that the section permitting national banks to open branches in foreign countries will remove one of the greatest handicaps under which our foreign trade now labors.

It is claimed that many national banks will refuse to participate in this plan and will surrender their charters, but I do not think so. It is claimed that a great many country banks will have difficulty in procuring the 10 per cent of their capital stock which will be required to be paid in cash into the Federal reserve bank in their neighborhood, but I do not believe this will be the case. What concerns me most is the fact that the 12

Federal reserve banks will have paid-up stock and deposits in excess of $700,000,000, and the amount of credit which can be made available to the Nation is variously estimated at between two billion and three billion dollars. Should this credit be made immediately available, such an expansion of business would occur as would probably wreck the Nation before long. The directors of the Federal reserve banks will be subjected to enormous pressure to extend credits more rapidly than the business world can assimilate them, and the success of the whole measure must depend on the wise administration of the affairs of the Federal reserve banks by their respective directors and by the members of the Federal reserve board.

It is difficult to realize at first glance the tremendous stimulus to legitimate business which the availability of two or three billion dollars of credit will mean to this fast-growing Nation, but with the opportunity walks hand in hand the danger of overproduction and unwise speculation.

The business men of the country must rejoice at the prospect of their credits being no longer periodically curtailed by local commercial crises; the wage earners must rejoice at the prospect of steady employment with no shutdowns on account of impaired credits of those for whom they work; and the farmers must rejoice at the prospect of being able to obtain currency on their crops at a reasonable rate of interest.

Tariff Catechism.

EXTENSION OF REMARKS
OF
HON. FRANK E. DOREMUS,
OF MICHIGAN,
IN THE HOUSE OF REPRESENTATIVES,
Tuesday, September 30, 1913,

On the conference report to the bill (H. R. 3321) to reduce tariff duties and to provide revenue for the Government, and for other purposes.

Mr. DOREMUS. Mr. Speaker, some time since, upon the suggestion of Mr. Bryan, Representative OLDFIELD, of Arkansas, prepared for the Commoner a "tariff catechism" on the subject of free raw materials. At the request of numerous Members, I insert this catechism in the RECORD under the general leave to print:

"Q. I am somewhat confused as to what is meant by the phrase 'raw materials'; can you explain it to me?—A. Yes. Raw materials are those materials which are in their lowest and crudest form when they enter commerce.

"Q. Can you name some things which are raw materials?—A. Yes. Cotton, wool, lumber, coal, iron ore, etc., are raw materials.

"Q. What do you mean by free raw materials?—A. I mean that the raw materials, such as I have just named, are free when they are imported into this country from a foreign country free of any tariff tax.

"Q. What do you mean by the terms tariff tax or customs duty?—A. A tariff tax or customs duty is a charge which is paid at any customhouse for the privilege of bringing a particular article into this country from a foreign country.

"Q. Does this tariff tax enhance the price of the article to the consumer?—A. Yes.

"Q. Will you give me an illustration?—A. Yes. If a foreign hat merchant has a particular kind of hat which he can afford to sell for $2 and he brings that hat to this country to sell, and if he were not compelled to pay a tariff tax he could sell it for just a little more than $2, say $2.25, but if he is compelled to pay a tariff tax of $1 on the hat, then he must sell the hat for more than $3.

"Q. Well, I believe I understand that. Now, tell me, is the doctrine of free raw materials good Democratic doctrine?—A. Yes.

"Q. What Democratic tariff bill can you name which recognized this doctrine?—A. The Democratic tariff bill of 1883, known as the Morrison bill, recognized it. The Mills bill of 1888 and its framers recognized this doctrine. The Springer bill of 1892, another Democratic tariff bill, and its framers advocated and recognized this principle; and the Wilson bill of 1894 and its framers recognized this principle or doctrine of free raw materials; also the Underwood tariff bill recognizes this principle or doctrine of free raw materials.

"Q. What Republican tariff bills have put into practice the doctrine of free raw materials?—A. None.

"Q. Can you now give me the names of Democratic leaders who have stood for this doctrine of free raw materials?—A. Yes. Robert J. Walker, the great Democrat who was Secretary of the Treasury when the tariff of 1846 was written, and James M. Guthrie, another great Democrat and who was Secretary of the Treasury when the tariff of 1857 was written, both advocated the doctrine of free raw materials.

"Q. Can you give me the names of distinguished Democrats who have advocated this doctrine of free raw materials of a more recent date, say since the Civil War?—A. Yes. Roger Q. Mills, William L. Wilson, William R. Morrison, John G. Carlisle, Benton McMillin, Clifton R. Breckinridge, Roswell P. Flower, Isham G. Harris, Z. B. Vance, Daniel W. Voorhees, James B. Beck, Richard Coke, John H. Reagan, Grover Cleveland, William J. Bryan, Champ Clark, Oscar W. Underwood, Senator Kern, Senator Gore, and other Democratic leaders of the House and Senate, and Woodrow Wilson, the President of the United States.

"Q. Can you give me the names of some distinguished Republicans who oppose the doctrine of free raw materials?—A. Yes. John Sherman, Thomas B. Reed, Julius C. Burrows, Sereno E. Payne, William H. Taft, John Dalzell, Albert J. Hopkins, James S. Sherman, Reed Smoot, Henry Cabot Lodge, Joseph G. Cannon, Nelson W. Aldrich, Boies Penrose, Simon Guggenheim, Isaac Stephenson, and William Lorimer, all of these leaders of the Republican Party and the protection idea oppose the Democratic doctrine of free raw materials.

"Q. Can you give me any particular instance of any of the distinguished Republicans you have just named expressing opposition to free raw materials?—A. Yes. John Sherman, in his book entitled 'Forty Years in the House, Senate, and Cabinet,' says: 'The dogma of some manufacturers, that raw materials should be admitted free of duty is far more dangerous to the protective policy than the opposition of free traders; a denial of protection on coal, iron, wool, and other so-called raw materials will lead to the denial of protection to machinery, to textiles, to pottery, and other industries.'

"Q. What has Mr. Aldrich said on this subject?—A. In 1909, when the Payne-Aldrich tariff bill was under discussion in the Senate, Mr. Aldrich said he knew of no Republicans and no protectionists who were in favor of the doctrine of free raw materials.

"Q. Well, I guess Mr. Aldrich would have known if any Republicans and protection manufacturers were in favor of free raw materials, would he not?—A. Yes. Nobody in the country knows the personnel of Republican leaders and the teachings of the Republican Party better than Mr. Aldrich.

"Q. I have read where some distinguished Democrats have recently said that they believe in a small revenue duty on everything. Also, if we must have a tax on the finished product, then the people who produce the raw materials should have the benefit of a tariff. How about this doctrine?—A. I would say, beware of this doctrine.

"Q. Why?—A. Because this sort of doctrine leads you to the conclusion that tariff taxes are not burdens, but benefits.

"Q. How is that?—A. The Republican theory is that tariff taxes should be so laid that there shall be both equal burdens and equal benefits, although it does not work out that way and, in the very nature of things, can not work out that way.

"Q. Now, what is the Democratic doctrine on this proposition?—A. The Democratic doctrine is that all taxes are burdens and are therefore evils. The Democratic doctrine is that the power to tax is the power to destroy.

"Q. Does the Democratic Party believe that tariff taxes take money out of the pockets of the people?—A. Yes.

"Q. What does the Republican Party teach that tariff taxes do for the people?—A. The Republican Party says that 'tariff taxes are not burdens,' but they are good things and help the people.

"Q. Does not the Republican Party teach that all taxes are burdens?—A. No. The Republicans say that the more the people are taxed the richer the people become.

"Q. But I have read where some prominent Democrats in Congress say that they do not believe in a free list, but that everything should be taxed a little.—A. If you will converse with those same Democrats for a little while you will discover that this is only a veil they use in hiding their real motives, and when you hear a Democrat say he believes in a little tariff tax on all articles you may put it down that he is a protectionist and is more anxious to secure a high duty on something produced in his own district or State. In other words, he has herrings on the brain.

"Q. What do you mean by the last part of your answer, saying he has herrings on the brain? What do herrings have to do with this question?—A. Didn't you ever hear of the letter the Englishman wrote Sir Robert Peel, when he was trying to

destroy the protective system in Great Britain, back in 1842, asking him not to repeal the tariff on herrings?

"Q. No. Won't you please tell me about it?—A. Well, Sir Robert Peel was the leader in the House of Commons, in 1842, in the fight to reduce tariff taxes in Great Britain, and while delivering a speech in the House of Commons he read this letter from one of his constituents, which is quite similar to letters which are being received by Representatives and Senators in Congress now. Here is the letter: 'I am a free trader in every other respect, but with respect to herrings I caution you against applying the general rule to them.'

"Q. Why are the sentiments contained in that letter similar to the views held by Representatives and Senators who want a little tariff on everything?—A. Because, while they are free traders in the products raised in other Members' districts, they know they can not get the protection they desire on the products produced in their own districts unless they concede a little protection to articles produced in the districts and States of other Representatives and Senators.

"Q. Oh, I see. But, back to wool. Did you say wool is a raw material?—A. Yes.

"Q. The woolen manufacturer is in favor of free or untaxed wool, is he not, since he would then get his raw material cheaper?—A. The woolen manufacturer is not in favor of free wool, for the reason that if there is a duty on raw wool then the manufacturer is invariably compensated by having the duty on his finished products increased to the extent of covering all of the tax or duty he has to pay on his wool. Hence the duty on the wool does not cost him anything, as he just charges it to the consumer, who has to pay all of the duty on the raw wool and also the duty on the finished product of the manufacturer, together with interest and profits added.

"Q. Is there any other reason why the manufacturer of woolen clothing does not want free wool?—A. Yes; they want the cooperation and help and influence of the woolgrowers of the country to assist them in passing the kind of tariff legislation they want.

"Q. You don't mean to say that the woolen manufacturers and the woolgrowers together have so much influence over the people's Representatives and Senators at Washington that they can write the kind of wool and woolen bill in Congress they want, do you?—A. President Taft stated, after the Payne-Aldrich bill became a law, that the influence of the woolgrowers and the woolen manufacturers prevented the Republican Party from revising the wool schedule downward, as should have been done.

"Q. Well, how would free wool help in the matter of tariff reform?—A. If wool were placed on the list free of duty, then the producers of wool would demand that the duty on manufactured woolen goods be reduced to a revenue basis, and eventually the finished woolen goods would also go on the free list.

"Q. I see. You would divorce the interests of the woolen manufacturers and the woolgrowers.—A. Exactly. When protectionists fall out, honest people get their dues.

"Q. Can you illustrate this more fully?—A. Yes. When the tariff is taken off of wheat, then the wheat grower will be ready to help the Democratic Party take the tariff off of flour. When the tariff is removed from the farmer's hogs and cattle, he will be ready to help remove the tariff from pork and beef. When the tariff is taken off of wool, then the woolgrower will be ready and anxious to take the tariff off of woolen cloth and woolen blankets and woolen fabrics.

"Q. Well, now, I see that a tax on wool helps the woolgrower and also helps the woolen manufacturer, but whom do these duties hurt?—A. Every man, woman, and child in the United States who buys woolen clothing, woolen blankets, and woolen fabrics for protection from the winter's cold.

"Q. How much did the woolgrowers and the woolen manufacturers get of the people's money under the Payne-Aldrich tariff law, owing to the high tariff on wool and woolens?—A. About $400,000,000.

"Q. How much did the woolen manufacturers get of this amount?—A. They got abont $370,000,000, and the woolgrowers got the balance.

"Q. Do you believe that all raw materials of manufacturers should be placed on the free list?—A. Yes.

"Q. Why?—A. Because the people would get the finished product cheaper.

"Q. Is it true, as I have heard some people state, that the consumers would not get the finished article any cheaper if the raw material were placed on the free list?—A. Well, I believe I can prove by such Republicans as Sereno E. Payne, Thomas B. Reed, and John Dalzell that the consumers would get the finished products cheaper if raw materials were placed on the free list.

"Q. Well, I would like to have the proof.—A. When the Wilson bill, a Democratic tariff bill, was under consideration in Congress, Sereno E. Payne, John Dalzell, Julius C. Burrows, Thomas B. Reed, Albert J. Hopkins, and John H. Gear signed a minority report on the bill. In this report they used this language: 'If he (the manufacturer) can make his goods any cheaper because of free wool, he must sell them just as much cheaper.'

"Q. Well, well, these big Republicans admitted that free wool was right from the consumer's standpoint, didn't they?—A. They did.

"Q. How many woolen-manufacturing establishments are there in this country?—A. In 1905 there were only 1,213 such establishments.

"Q. How many sheep raisers are there in the country?—A. That is a difficult question to answer. There are probably only a few thousand who are exclusively in the woolgrowing business.

"Q. Which one of the States in the Union produces the greatest quantity of wool?—A. Montana.

"Q. How many people live in the State of Montana?—A. Five hundred thousand.

"Q. How many people in the State grow wool?—A. Not more than 1,000.

"Q. Oh, yes. The 500,000 people in the State are taxed for the benefit of the 1,000 who grow wool. Is that right?—A. You are exactly right.

"Q. What other profit is there in the sheep-growing business besides the production of wool?—A. Why, sheep are valuable as mutton, a food product. As a matter of fact, wool is rapidly becoming a by-product in the sheep-growing industry the world over.

"Q. Then this tariff on wool is placed on a necessary of life to help a comparatively few sheep owners?—A. Yes.

"Q. Is it Democratic doctrine to place all raw materials of manufactures on the free list?—A. Yes.

"Q. Should the question of revenue to pay the expenses of the Government enter into the question?—A. Yes. Of course we must raise a sufficient amount of revenue to run the affairs of the Government.

"Q. If you can not obtain enough revenue to run the Government by levying a duty on manufactured products, then how will you get the revenue?—A. I would place a revenue duty on raw materials not produced in this country—like raw silk, raw rubber, and diamonds.

"Q. Why do you say you would place a duty on raw materials not produced in this country?—A. First, because whatever the people might have to pay for the privilege of consuming such materials or articles manufactured out of them would go into the Public Treasury and not into the pocket of some special interest.

"Q. What is your second reason?—A. Well, when it became necessary to change the duty or tariff tax on such raw materials such change would not disturb the business conditions of the country.

"Q. But would not this duty cause these things after they are advanced to the finished article to cost the people who use them more than if they were placed on the free list?—A. But people who wear diamonds and silk and own automobiles are better able to pay taxes than those who have to buy woolen clothing.

"Q. Then you would not lay down the hard and fast rule that all raw materials should always be placed on the free list?—A. I would say all raw materials out of which are manufactured the necessaries of life should be placed on the free list, so that the poor could get those necessaries cheaper than if the raw materials were taxed.

"Q. Where would you place the highest tariff taxes?—A. On luxuries.

"Q. The next highest?—A. On the comforts of life.

"Q. Then what would you do?—A. I would place the necessaries of life on the free list.

"Q. But, if you could not raise enough revenue in that way to run the Government, what would you do?—A. I would pass an income-tax law, the most just and equitable tax that has ever been devised, just as we have done in the Underwood bill.

"Q. But, another question on raw materials. I have read in the CONGRESSIONAL RECORD where some distinguished Democrats have said, 'The raw material of one man is the finished product of another.'—A. You mean that great Democrat, ex-Senator Nelson W. Aldrich, of Rhode Island, said that, don't you?

"Q. Come off; what are you giving me? Do you think I am so ignorant that I do not know that Aldrich is a Republican and has been one of the leaders of the Republican Party for the past quarter of a century? I don't mean Aldrich; I mean

I have noticed where Democratic Members of Congress and Senators have advanced this doctrine in recent speeches in Congress. I want to know who originated this doctrine that for tariff purposes the raw material of one man is the finished product of another.—A. I am glad you have asked me that question, because I believe I can give you the origin of this fallacious doctrine. Back in 1888, when the Mills bill, a Democratic tariff measure, was being considered by Congress, Mr. Aldrich, of Rhode Island, submitted to the Senate a report on this bill in which he said: 'The doctrine of free raw materials as advocated by tariff reformers is a difficult one to enforce in legislation. In the usual division of labor, the finished product of one man becomes the raw material of his industrial successor.'

"Q. Well, it seems that Democrats who make that argument are following in the footsteps of Senator Aldrich rather than in the footsteps of the Democratic fathers. Is that true?—A. That is undoubtedly true.

"Q. Well, I now think our Democratic Representatives and Senators should advocate the time-honored principles of the Democratic Party, including free raw materials, and reduce the tariff on the finished products of the manufacturer to a strictly revenue basis. Then, when we succeed in enacting a graduated income-tax law in this country, we can lighten the burdens of the toiling millions of this Republic, caused by the tariff taxes on what they consume and the tools they work with, and thereby compel the wealth of the country to bear its just proportion of the burdens of government.—A. You are right. Shake."

The Tariff.

EXTENSION OF REMARKS
OF
HON. JAMES MANAHAN,
OF MINNESOTA,
IN THE HOUSE OF REPRESENTATIVES,

Tuesday, September 30, 1913,

On the conference report to the bill (H. R. 3321) to reduce tariff duties and to provide revenue for the Government, and for other purposes.

Mr. MANAHAN. Mr. Speaker, when this tariff bill was before the House in May I tried to have it amended, to make it more favorable to the Northwest and less favorable to the South, to give some protection to our producers and less protection to the eastern manufacturers and the southern cotton belt. I fought hard, but in vain, for these amendments, and voted against the bill as a protest and in the hope that it would be improved in the Senate.

The Senate debated the measure all summer and made 676 amendments, which have improved the bill in many particulars. It is a much better bill as it now comes before us from the conference committee than when it was considered by the House in the early summer. It is a fairly protective measure; in fact, the rates are still too high on many articles. But no further change is possible at this time, and it is now necessary to choose between this measure and the Payne-Aldrich law which the people have condemned. I prefer to keep company with ROBERT M. LA FOLLETTE rather than SERENO E. PAYNE in this matter, and I unhesitatingly vote for this bill on its final passage.

This record squares with my platform and pledge of the last campaign, which was as follows:

It costs too much to live. The laws favoring special privilege overtax everybody to benefit a few.
High prices hit consumers without profiting anyone but carriers, trusts, and holders of watered stock.
Farmers and toilers hold the sack while Wall Street and big business, by tariff laws, trusts, and railroads, gather the profits.
Everybody is overtaxed by monopolies and overcharged for public service under existing laws.
I propose to fight for tariff reduction, lower transportation charges, destruction of monopoly, a fair chance to men and women who work, and no chance for those who steal.
I stand for the Wisconsin idea, including the initiative, referendum, and recall, presidential primaries, and the direct election of United States Senators.
I believe in the people, and to the people submit my candidacy.
I pledge myself to all legislation making it cost less to live.

On this platform and promise I was elected by a majority of 84,656 votes.

This bill for which I vote is a substantial tariff reduction and redeems my promise in that regard. It will give us all cheaper sugar, cheaper shoes, cheaper cotton and woolen goods, cheaper steel and iron utensils, and it will give the farmers cheaper grain sacks, fencing wire, saddles, harness, and agricultural implements generally. The provisions of the Underwood bill taxing the raw furs so extensively used in our climate by men compelled to work out of doors were also changed in the Senate, and in the present bill they are admitted free of duty. This, too, will help our people in the matter of clothing, so important during our inclement winters.

The general effect of this bill should be to reduce the cost of living to all consumers. If the Canadian Government imposes a duty on wheat, flour, or potatoes, our producers will be protected, under the terms of the Senate amendment, by a duty of 10 cents a bushel on wheat, 45 cents a barrel on flour, and 10 per cent ad valorem on potatoes. Should the Canadian Government admit our wheat, flour, and potatoes to their markets free, as I fear they will, it will open our doors to the competition of the farmers of Canada, which is unfair, in my opinion, to our farmers. At the time these schedules were first considered in the House, I vigorously opposed and voted against the removal of the tariff on these staple commodities. I think we ought to have maintained on wheat a duty of not less than 6 cents a bushel—10 would be better—and a corresponding duty on flour and potatoes—this to represent substantially the actual difference in the cost of production between Canada and the United States. However, this disadvantage, which we will doubtless suffer as a producing State, will be made up to us, in large measure, by making cheaper the things we have to buy and by shifting a large portion of the burden of taxation to those who enjoy large incomes.

THE INCOME TAX.

This the income-tax provision does; and the more I study this income-tax schedule the more certain I become of the wisdom of the law, in spite of its unfairness to our wheat raisers.

In fact, Mr. Speaker, this income-tax schedule, which has been improved by the Senate, more than redeems the whole measure. Taxing, as it does, annual incomes from $3,000 up, which is increased by an additional tax when the income exceeds $20,000 per year, this law will compel men of large incomes to bear a heavy part of the national burden of taxation. To illustrate: A multimillionaire, like Carnegie or Rockefeller, whose income is, say, $10,000,000 per year, will pay an annual tax to support the Government of $700,000. Our own millionaires, like Hill and Weyerhaeuser, with incomes estimated at $1,000,000 per year, will have to pay $70,000 annually to support the National Government. To some this may seem oppressive, but to me it looks like simple justice. Our laws have been so lax and there has been such unlimited opportunity for exploitation of the natural resources of the country that there is to-day too wide a spread between wealth and poverty. A few are so very rich and many are so very poor in this country that it has become necessary to restore the equilibrium, as far as possible, by taxation. Otherwise the day would come when brutal methods would prevail. There is a great menace in the concentration of wealth in a few hands. It ruins rich and poor alike. There is hope in laws like this, made to bring about a fairer distribution of wealth and a more just distribution of the burdens of government.

THE CLARKE AMENDMENT—GAMBLING IN COTTON AND WHEAT.

I regret that the conference committee and the House refuse to agree on the Clarke amendment passed by the Senate. This amendment provides for the collection of a tax on all future trading in cotton. It would have destroyed gambling in the pit and the manipulation of prices by traders in that great commodity. Congress is not justified in permitting the great cotton and wheat exchanges of the country to maintain and operate a great gambling institution. The cotton and wheat gamblers of the United States operating on these cotton exchanges and chambers of commerce under sanction and protection of law by betting and pretending to bet with each other as to the future prices of cotton and wheat have controlled the markets and depressed the prices to the farmers during the periods when the farmers had to sell, while at the same time controlling distribution, transportation, credit, and trade so as constantly to increase the cost of living and the burdens of consumers. These cotton and wheat gamblers absorb millions annually, increasing the cost of living to all and cheating the farmers. This Congress should at its general session enact legislation similar to the Clarke amendment to this tariff bill, but enlarged so as to cover all the staple articles produced by the farmers in which there is future trading, and thus destroy gambling in the necessities of life and manipulation of markets.

OTHER LAWS ARE NECESSARY.

The downward revision of the tariff alone will not solve the high cost-of-living problem. It is a step in the right direction, but it is necessary to take other and firmer steps before the goal

is reached. It is necessary to establish and maintain a banking system that will enable agriculture to finance itself at a low rate of interest. It is necessary to free our great terminal markets from the oppression of manipulating and gambling. It is necessary to compel the great transportation companies to haul freight at a lower rate and to permit a common interchange of railroad equipment without discrimination. It is necessary to prevent stock watering of all the great industrial corporations, as well as of transportation companies. The Coal Trust and the cold-storage abuse must be destroyed; and most important of all, it is necessary to break the grip of the giant bankers over the control of the credit of the entire Nation, a control which fosters monopoly, prostitutes society, persuades preachers, hires special pleaders and writers, frightens business men, and often owns politicians.

THE EVIL OF PARTISANSHIP.

I regret to find so many men in this Chamber who are inclined to be influenced by partisan considerations. To me partisanship is a deadly blight. Until brave men broke the bond of party solidarity under Cannon the control of big business over national legislation was complete. It will be the same thing under UNDERWOOD. The secret party caucus defeated the Clarke amendment to this bill and protected the gamblers in cotton and wheat. The liberty and protection of the people must always rest on agitation, insurrection, and rebellion against the machinery of organized partisanship. While I regret the necessity of differing from many of my Republican associates, I purpose while in office to maintain my right to an individual judgment on every matter before the House and to keep my pledge to the people of Minnesota to support and vote for "all legislation making it cost less to live," regardless of whether that legislation is labeled Republican, Democratic, Progressive, or otherwise. The label is not the law; but the law is life or death to business, to property, to labor. The law measures by the machinery of taxation, tariff taxes, freight-rate taxes, trust and monopoly prices which it permits, just how much people shall have of the fruits of their own toil. The law fixes the channels through which flow the fruits of the earth and the products of toil. The law is a mighty power and its making a sacred function. Partisanship should have no place in its making. Patriotism is a safer guide, and it is better to be right than to be regular.

Steel Cars.

EXTENSION OF REMARKS
OF
HON. CHARLES A. TALCOTT,
OF NEW YORK,
IN THE HOUSE OF REPRESENTATIVES,
Thursday, October 2, 1913.

Mr. TALCOTT of New York. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I will print the following extracts from the Scientific American of January 25, 1913, and September 20, 1913.

The extracts are as follows:

[From the Scientific American, Jan. 25, 1913.]

THE MERCY OF STEEL AND THE MENACE OF WOOD.

A STUDY OF SOME RECENT RAILROAD ACCIDENTS.

When the *Titanic* brushed elbows with an iceberg and tore open 200 feet of her length, the public wondered at the frightful character of the injury. But the engineer did not wonder—he knew perfectly well, although he had temporarily forgotten it, that the 1,000,000 foot-tons of energy in that onrushing ship was sufficient, had the obtrusion been solid rock instead of crumbling ice, to have opened up the whole length of the ship, if the pressure of her helm had sufficed to hold her a little longer against the side of the iceberg. In multiplying length and breadth, tonnage and speed, naval architects had overlooked the fact that it was incumbent upon them to introduce underwater constructions which would limit the dangers due to the enormous energy of the giant vessels of the twentieth century.

What is true of the sea is true also on the land. There has been an astonishing growth in the length, size, and weight of the modern railroad train. Cars have trebled and engines have doubled in weight during the past three or four decades. Speed, also, has gone up to a higher figure, and with all this there has come an enormous increase in the energy, the destructive energy, of the train when it is developed by collision, derailment, or other form of accident. Let us prove this by figures. The modern steel car weighs 70 tons and the modern express locomotive 200 tons. Such a locomotive on level tracks can haul 10 such cars at a speed of 70 miles an hour and on a downgrade 80 miles an hour or more. At 70 miles an hour a train weighing 900 tons would have a striking energy of 150,000 foot-tons. If, through disobedience or failure to see signals, it dashed at full speed into a stalled train, it would strike a blow equal to that delivered by three of our latest 12-inch naval guns—and each of these, be it remembered, can bore a 12-inch hole clear through some 42 inches of iron.

How many enginemen of fast expresses realize that if they were riding three 12-inch shells, delivered at point-blank range, they would hit the target no harder than the fast-flying train which they hold in their hands would hit a standing train ahead?

Now, when from 50,000 to 150,000 foot-tons of energy is suddenly arrested, whether by the instantaneous shock of collision or by the more gradual and multiplied shocks of a derailment, something has got to go; and just how it goes is shown in the accompanying series of photographic views (not printed) of more or less notable railroad accidents which have occurred during the past 18 months. They represent photographs of wrecks which were investigated by Mr. H. W. Belnap, chief inspector of safety appliances for the Interstate Commerce Commission. Federal inspection of railroad wrecks is a development of the past few years, and one has only to read the many careful and intelligent reports which are regularly issued by the commission to understand that this section of their work is one of the most powerful of the many influences which are now working for the promotion of safe railroading.

The writer has selected these views with a view to emphasizing two truths—first, the peril of the faulty steel rail, and second, the merciful protection to life and limb which is afforded by the steel car. The first photograph shows the results of a derailment, caused by a broken rail, which occurred August 25, 1911, on the Lehigh Valley Railroad, near Manchester, N. Y., and resulted in the death of 29 persons and the injury of 92 others. The track was first class and well maintained, consisting of 90-pound rails, with tie-plates on each tie, the rails being double spiked on the inside of the rail through the plates. The train consisted of 2 engines and 14 cars. The rail broke, probably under the engine, at a point 247 feet west of a steel girder bridge over Canandaigua Outlet. Two cars fell over the bridge. The first dropped entirely, and in it the majority of the fatalities occurred. The second car fell and stood on end, as shown. The pieces of the broken rail were sent to the Bureau of Standards, Washington, and most carefully examined. It was found that the rail was what was known as a "piped" rail, and the report states that the piping or "slag split" could be seen in practically every portion of it. The illustration in the corner of our engraving shows this pipe—represented by the fine black line extending through the vertical web. No inspection of the track could possibly detect a defect so completely concealed.

This accident, then, is chargeable to faulty work at the rail mills.

There is probably no defective member of which the railroad man stands in greater fear than the "piped" rail. It has been the cause of endless wrecks, some of them of the most disastrous character. The "pipe" is generally a hollow shrinkage cavity formed when the ingot is cast, which is closed up when the rail is rolled, and exists as an incipient flaw or fracture in the body of the rail, where it is generally entirely hidden from sight. Under the stress of traffic cracks develop, spread, and ultimately result in complete fractures. Illustrations VI and VII show broken sections of a rail which went to pieces under a train on the Great Northern Railway near Sharon, N. Dak., causing the death of 5 people and injuring 18 others. The entire train of 8 cars was derailed. The head of the rail was found to be split for a length of nearly 8 feet, but the investigation showed that the initial rupture at the time of derailment was a crescent-shaped fracture in the base of the rail (shown in illustration No. VII), due to laminations in the metal. The split head was due to segregation of the phosphorus and sulphur in the rail and irregularity in the carbon contents. These defects are chargeable to the present unsatisfactory methods of rail manufacture. They are curable by the use of such methods of ingot casting as that shown in our issue of December 21, 1912, describing the Hadfield method of casting ingots.

The 90 and 100 pound steel rail, if properly made, will stand up to its work, even under the exacting conditions of present heavy and fast traffic, provided it is thoroughly fastened to the ties and ties and roadbeds are maintained in absolutely first-class condition. Illustrations III and IV show the derailment, at Hyde Park, N. Y., March 31, 1912, of the Twentieth Century Limited while it was running on a 2° curve at a speed of 50 to 60 miles an hour. Says the Interstate Commerce Commission report: "It is believed that the use of shims" (small blocks of wood used to raise the tracks and placed between rails and ties), "together with irregularities or unevenness in the track, so weakened the track structure that it could not withstand the strain due to the heavy locomotive and train rounding the curve at high speed, and the outside rails were forced outward, probably by the engine."

From the point of derailment the outside rail of the curve was turned completely over for a distance of about 1,700 feet. The first rail to be disturbed is marked "Illustration II." On the inside of this rail 11 spikes were partially drawn; and on the inside of rail 3, the outside ties had been crowded outward more than their width. The engine, tender, a buffet car, and one sleeping car remained on the roadbed. The remaining five cars, four of them of steel, rolled down the embankment and came to rest on the heavy ice of the Hudson River. This served to show, first the insufficiency of the common form of track fastening to hold the outside rail on curves up to its place against the centrifugal thrust of the modern, heavy, high-speed train. The remedy is to be found in using tie plates beneath the rail on every tie and substituting the powerful screw spike for the archaic and very inefficient wedge spike, which, after all is said and done, is nothing more or less than a magnified nail. The other lesson taught is the wonderful protection afforded by the strong steel car, which, even under such rough handling as this, was neither telescoped nor crushed. The picture of these cars lying intact on their sides on the ice of the Hudson River speaks for itself.

Further proof of the remarkable strength and stiffness of the steel car was given in the wreck last November of a fast passenger train on the Pennsylvania Railroad at Glenloch, Pa. This was a heavy 14-car train, of steel construction, hauled by two engines. A box girder on a bridge over the train's crossing yielded under the weight of the two engines, the depression being about 18 inches, and the jar derailed the train. Five of the 75-ton steel sleeping cars were thrown down the embankment, the cars shutting up concertina fashion, and coming to rest in the positions shown in the illustration No. IV, published by courtesy of the Railway Age Gazette.

Years ago, when the Scientific American was advocating steel-car construction, we pointed out that instead of the telescoping which was so frequent and so destructive of life with wooden-car construction, the train of steel cars would probably yield at the couplings, the energy of the train being absorbed in folding up, as it were, the train. Now this is exactly what happened at the Glenloch derailment. The only steel car seriously damaged of those shown in this picture is the one at the right hand, which turned over on its side, its roof colliding with a loaded coal car, and the relatively frail roof structure inevitably crumpling up under the force of the impact. Four people only were killed. Forty-nine were injured by being thrown around the cars.

The fragility of the wooden car and the fact that the work of developing the energy of the train will occur at its weakest point is shown in the illustrations 5 and 8 of a wreck on one of the southern railroads. The derailment was due to poor track conditions. The energy of the

after part of the train, which remained on the track, completely telescoped two rather flimsy tourist wooden cars into less than the space formerly occupied by one of them. By far the most significant picture of those which we present is illustration No. 10, showing a steel day coach after it had assisted in completely demolishing the two wooden cars to the rear and in front of it. This car passed through the frightful collision on the Delaware, Lackawanna & Western Railroad, near East Corning, N. Y., on July 4, 1912, when an express train, disregarding the distance and stop signals, crashed at 60 miles an hour into the rear of an express train ahead of it. The energy of the colliding train was expended mainly on the last three cars of the train ahead. The rear car was a wooden day coach, the next was a steel coach, and ahead of that was a wooden sleeping car of very strong construction. The flagman of the stalled train went back some 2,000 feet from the rear of his train, put a lighted green fuse on the end of the tie on the enginemen's side of the track, waved his flag, but did not, as he should have done, place any torpedoes on the rail as required by the rules during foggy or stormy weather.

An eight-car express train, running 60 miles an hour, swept round a curve, disregarded the distance and home signals, the flagman's flag, and the green fuse, and swept straight ahead. The engineer was busy with his injectors, which were out of order, and when he passed the flagman was observed to be looking not ahead but across the boiler. The rear wooden car, caught between the upper and nether millstones of the engine and the steel car, was reduced to matchwood, as shown in illustration No. IX. In acting as the anvil for this mighty blow of nearly 70,000 foot-tons, the steel car suffered no worse injury at its after end than the crushing in of the platform. Driven forward by the impact, it reduced to unrecognizable wreckage no less than two-thirds of the heavy sleeper ahead. In doing this it suffered the injury shown at the left end of the car in illustration X. Beyond the fracture of windows, the main body of the car, as can be seen from the photograph, is practically intact.

An automatic stop, set 1,000 feet back from the home signal, would have averted this wreck, in which 49 people were killed and 88 injured.

Summing up, then, we may say that the lessons taught by the accidents we have had under review are mainly three: First, the imperative necessity of changing the practice of our rail mills so as to absolutely eliminate rails that are piped or otherwise defective; second, the substitution, as quickly as financial and other conditions will allow, of steel for wooden cars; and, last, the universal adoption, in connection with the present block-signal system, of the automatic stop.

[From the Scientific American, Sept. 20, 1913.]

THE STEEL CAR AS A LIFE-SAVER—TELESCOPING IS PREVENTED BY ALL-STEEL CONSTRUCTION.

In the recent wreck on the New Haven Railroad the heavy colliding engine and train split entirely apart the two rear wooden sleeping cars of the train ahead, scattering the wreckage and the helpless passengers to right and left as it crushed its way through. Over a score of people were killed outright.

It is begging the question to say that had the cars been of all-steel construction none of these lives would have been lost; but there is abundance of evidence, drawn from the behavior of steel cars under conditions practically as severe as these, to show that steel construction would have saved the lives of many, if not of the greater part, of the occupants of these two rear cars.

In the event of a heavy collision wooden cars fail, either by going entirely to pieces, as in this case, or by one of the massive and strong underframes mounting upon another and shearing the superstructure of the lower car entirely from its base. Wooden construction has the disadvantage that, although its strength to resist the first shock is great, once it has given way it offers but little progressive resistance to the crushing and rending energy of the collision; whereas the tough metal of which steel cars are built not only offers a much greater resistance to the first shock, but, after the car or cars have begun to give way, the material still puts up a stubborn fight to retain its original form.

The behavior of trains of steel cars in collisions shows that the end platforms and vestibules, which are not or should not be occupied by the passengers when the train is in motion, form a natural buffer and "yield point," and that the first energy of the collision, and generally the whole of it, is expended in crumpling up the vestibules; furthermore, this usually occurs without any loss of life.

Although the steel car will save its inmates from crushing injuries which result in more or less speedy death, it can not safeguard them from the contusions due to the sudden arresting of the train and the hurling of the passengers forward or backward, according as they are in the train which strikes or the one that is run into.

These facts are brought out in a report of the Interstate Commerce Commission on the wreck at Tyrone, Pa., on July 30, on the Pennsylvania Railroad, in which, although 153 people were more or less injured, only one was killed. This collision was an almost exact duplication of that at North Haven on the New Haven Railroad. A train standing on the track was struck in the rear by a fast train. Not one car in either train was of wooden construction, and the only damage resulting was the crushing in of the vestibules. The heaviest damage, of course, was done to the rear car, which was crushed for 10 or 12 feet in the rear, while the forward end was jammed for 6 or 8 feet into the rear of the car ahead. Subsequently to the New Haven wreck, a fast train was ditched near Wylie's station, on the Pennsylvania Railroad, on September 9, and although six steel coaches were flung from the track and turned over in a corn field, only 35 persons were injured and none were killed.

By way of showing the great resistance afforded by steel construction, we present the accompanying illustrations of a wreck which occurred in July of this year on the tracks of the Northern Pacific Railway in the State of Washington, in which three passengers and one employee were killed and seven passengers were injured. The train consisted of a 200-ton engine, followed by 3 refrigerator cars, 1 combination baggage and express car, 3 day coaches, 1 dining car, 1 Pullman sleeping car, and 1 observation car, making 10 cars in all. The train, which was making up lost time, jumped the track when it was running at a speed of 60 miles an hour. The engine rolled over into a gravel embankment, and the whole train was brought so suddenly to a stop that the shock was not much less severe, probably, than that of a direct collision. The forward truck of the first steel day coach was knocked from beneath the car, allowing the forward end to drop and causing the rear end of the car ahead to mount the underframe and crush in the left-hand side of the car to the extent shown in our illustration.

When we remember that this 15 or 20 feet of the car had to absorb the enormous energy of the six rear cars, running at 50 to 60 miles an hour, the great resistance of the steel construction will be evident.

Cotton Futures.

EXTENSION OF REMARKS
OF
HON. WILLIS J. HULINGS,
OF PENNSYLVANIA,
IN THE HOUSE OF REPRESENTATIVES,
Tuesday, September 30, 1913,

On the amendment to H. R. 3321, relating to taxing gambling on exchanges in cotton futures.

Mr. HULINGS. Mr. Speaker, for more than four months the House has done nothing but wait until the Senate should act on this bill and wait until the Democratic caucus should enact a currency bill.

It seems very strange, then, to me that when a measure is proposed the object of which is to strike a blow at gambling in cotton, a measure which is surely in accord with enlightened public sentiment, a measure that is of great importance, a measure that has aroused greater general interest among the Members than any other single item in this tariff bill of 4,200 items, yet that this House with days of unoccupied time before it should only be able to devote 30 minutes to its discussion.

The Clarke amendment seeks to stop gambling in cotton futures by imposing a heavy tax, to be refunded in case the cotton is actually delivered. As I have stated in my former remarks, I fear that this method of prohibiting mere gambling transactions is unconstitutional, because the only warrant Congress has to legislate at all upon this question is derived from its power to raise revenue, when the fact is the bill could produce no revenue except by a violation of the prohibition.

The Underwood amendment, which came to him direct from the President, upon close examination—and very few Members were given the time to study it closely—does not require an actual delivery, and strict construction of the amendment, if enacted, would not stop gambling.

The volume of gambling transactions in cotton is but a drop in the bucket compared with the gambling done in stocks, grain, and other commodities.

There is a great pretense that these transactions are needed to "steady the market," to serve as "hedges" against legitimate business risks, to "carry over surpluses" in times of heavy crops, and thus to level up in times of short crops, and while it is true that the exchanges do perform a valuable function of trade, and as such are not to be injured, yet if the exchanges "carry over" surplus crops to times of short crops they can not complain if they carry the actual surplus crop, and not merely "wind."

Gambling, mere wagers in the fluctuations, actually achieve none of the valuable functions of the exchange. The argument that these gambling transactions aid the farmer is mere subterfuge. The gambler toils not, neither does he spin. He costs the country $100,000,000 a year, and the producer and the consumer among them, somehow, pay the bill.

There are no dealings in futures in cattle or horses, nor so far as I know in hay, potatoes, poultry, and in all these things the farmer does a great deal of trade without the help of the gambler or the exchange.

Stocks have no times of surplus or short crops; no "hedges" in stocks are necessary to cover legitimate business risks. Not one man in a thousand buys stocks because he wants stocks.

He merely takes a "flyer" in the market to satisfy his gambling propensity, and the transactions in stocks on the exchanges are enormously greater than transactions in agricultural products.

I can not understand, then, why stocks and grain were not included with cotton, since the evils are equally obvious.

Public sentiment is ripe for the extermination of the useless, expensive, and demoralizing features of exchange gambling.

The only valuable feature in the Underwood amendment is the enforcement when a delivery is made—and whether a delivery is made or not is optional with the seller—of one of the Government standard grades.

The Clarke amendment levies a heavy penalty if the delivery of the cotton is not actually made in all cotton contracts.

What is most needed is neither of these piecemeal measures, but a carefully devised bill that shall include stocks, grain, cotton, and all the vehicles of these gambling transactions on the exchanges; which shall clearly fall within the legislative power of Congress; and which shall effectually prohibit gambling operations which have become a public curse.

Such a measure, I believe, will be found in H. R. 7360, to which I have already referred and which I commend to your consideration for further action.

The Tariff.

Tariffs are taxes mainly levied upon the necessaries of life of the people and not upon accumulated property. They are taxes upon want and not upon wealth. Hence the lower we make tariff taxes the better it must necessarily be for the great mass of the people, who as consumers are compelled to pay this tax sevenfold.

EXTENSION OF REMARKS
OF
HON. WILLIAM N. BALTZ,
OF ILLINOIS,
IN THE HOUSE OF REPRESENTATIVES,
Tuesday, September 30, 1913,

On the conference report to the bill (H. R. 3321) to reduce tariff duties and to provide revenue for the Government, and for other purposes.

Mr. BALTZ. Mr. Speaker, I am a plain farmer and business man, representing a district made up of citizens wholly occupied in mining, agriculture, manufacturing, transportation, and merchandise. Our people have no interest in the tariff question and the currency question different from that of the great mass of the honest people of the whole United States. Therefore in speaking for the people of my district I believe I am voicing not only their sentiments, but those of the great majority of good citizens throughout the country who have no ax to grind and no special privileges to be protected.

Therefore in speaking I speak for no great group of monopolistic, millionaire protective-tariff-bred manufacturers, and for no great center of high finance dominated by the Money Trust.

I am firmly convinced that what the people of my district desire and what will be legitimately most for their benefit, as well as for the benefit of the whole country, is a fair reduction of the tariff downward.

Tariff taxation is indirect taxation, and as such the man who pays it pays a sum vastly greater than the Government which levies the tax receives. It has been estimated by eminent authorities that for every dollar that the Government collects in tariff taxes the ultimate consumer pays $7. It must be conceded that such a system is an enormously wasteful and burdensome method of collecting taxes.

Tariffs are taxes mainly levied upon the necessaries of life of the people and not upon accumulated property. They are taxes upon want and not upon wealth. Hence the lower we make tariff taxes the better it must necessarily be for the great mass of the people, who, as consumers, are compelled to pay this tax sevenfold.

Just to the extent that in the Democratic tariff which we have passed at this session we have substituted income taxes for tariff taxes, just to that extent have we taken from the masses of the people and the wealth producers a burden unjustly laid on them and placed it upon wealth that will not feel the burden. If I were to suggest any improvement on this new revenue law it would be one which I hope and expect to see adopted in the near future, and that is a very substantial graduated increase in the taxes on large incomes of $25,000 or $50,000 a year and upward, with an especially heavy increase on those which run upward of $100,000 and to and beyond the million mark. Such vast incomes are not only an eminently proper subject for taxation, but the enormous concentration of wealth which they indicate is a menace to the prosperity and safety of the Republic.

Direct taxes such as the income tax are infinitely preferable in every way to indirect taxes such as protective tariffs. When the Government levies a direct tax on a citizen he knows just what he is paying and that just what he pays is just what the Government gets. On the other hand, when the Government levies an indirect tax like a tariff it is first paid by the importer, a percentage is then added on to it and the price of the goods charged to the jobber or wholesaler, who in turn adds his percentage and passes it on to the retailer, who also adds his percentage, and the aggregate of these various additions is finally paid by the consumer, who must pay this tax with all these percentages of profit added, not only on the amount of goods imported, but upon the goods of the same character manufactured in this country. So that where $1,000,000 worth of goods are imported and $10,000,000 worth are consumed in the country the Government gets taxes into the Public Treasury on $1,000,000 worth, while the consumers pay taxes into somebody's private pocket on the whole $10,000,000 worth.

I am not of those who believe that the tariff tax is the only tax in this country that should be revised downward. The Democratic Party has made a good beginning by revising downward the tariff duties on the necessaries of the poor man and revising upward the income tax on the revenues of the rich man.

We should go forward in the good work and make a broad and sweeping downward revision in the taxes levied on us by the great railroad corporations of the United States in the way of excessive and unfair freight and passenger rates. These rates are fixed so high now that the railroads are able to pay dividends to the amount of hundreds of millions of dollars a year on fictitious and fraudulent watered stocks and bonds which represent no investment of capital whatever—represent in fact nothing at all except the power of corporate monopoly to plunder the people.

Then there is another odious and burdensome tax of immense proportions levied upon the consumers of this country, including the railroads themselves, by the great mining and manufacturing monopolies and trusts, like the Steel Trust, the Oil Trust, Coal Trust, and so forth. I would be fair to the railroads, and, while compelling them to reduce their unjust taxes on the people, I would relieve them from the tax of extortionate prices for steel rails and structural steel levied on them by the Steel Trust by a strict enforcement of all the provisions of the antitrust law, which would break up this odious monopoly, restore free competition in the steel business, and put an end to the Steel Trust taxing the railroads $28 a ton for $14 rails and $32 a ton for $18 or $20 structural steel.

By the thorough and effective enforcement of all the provisions, both civil and criminal, of the antitrust law we would relieve not only the railroads but the people generally of monopoly taxes, amounting to many hundreds of millions of dollars a year, now unjustly and unlawfully levied on the consumer by the Coal Trust, Steel Trust, Tobacco Trust, Oil Trust, and scores of other criminal combinations, whose burdensome exactions amount to an annual levy upon the pocketbooks of the people, compared to which even the exactions of the robber tariff pale into insignificance.

The demand that the people rather than the representatives of protected interests should rule was the cause of the great Democratic victory last year. The Democratic Party has once more demonstrated that it is the party of the plain people, and it has redeemed its pledge to enact legislation which would revise the tariff downward. In so doing it has proven that it is the party of Jefferson, whose platform of "equal rights to all and special privileges to none" will not die while justice lives—yes; this Jeffersonian platform, this Democratic platform, is the only one that will preserve for us and for our posterity a government of the people, for the people, and by the people.

Gambling in Cotton Futures.

EXTENSION OF REMARKS
OF
HON. J. B. THOMPSON,
OF OKLAHOMA,
IN THE HOUSE OF REPRESENTATIVES,
Tuesday, September 30, 1913,

On Senate amendment 609 to the tariff bill, by Senator CLARKE, of Arkansas, to suppress gambling in cotton futures and the proposed substitute to regulate and license future transactions.

Mr. THOMPSON of Oklahoma. Mr. Speaker, in my opinion there is but one way to fight an admitted evil, and that is to fight to kill it. Gambling on the exchanges or in the bucket shops on farm products is an admitted evil. Why not by adopting the Clarke amendment destroy these exchanges, these bucket shops, where gambling is carried on in agricultural products? The only regret I have is that this amendment does not include gambling in all agricultural products the same as it applies to gambling in cotton. If it were permissible under the rules of parliamentary law that govern this House, I would move an amendment to the Clarke amendment so as to make it apply to all other agricultural products as it does now to cotton. The Democratic Party is pledged to legislation along this line, for in our Baltimore platform we said:

We favor the enactment by Congress of legislation that will suppress the pernicious practice of gambling in agricultural products by organized exchanges or others.

To me that platform is a command to suppress, to destroy, these exchanges or bucket shops and not to license them to prey upon the American farmer.

The Clarke amendment, it is admitted by all, will do the very thing that the Baltimore platform pledged the Democrats would be done—destroy gambling in cotton on the exchange and in the bucket shop. It not being permissible at this time to broaden the scope of the Clarke amendment so as to destroy gambling in all farm products, I shall support it as it is, with the statement that I shall introduce on the first day of the next session of this Congress a bill that will destroy gambling in all agricultural products produced by the great laboring masses of our country. It is admitted that the Underwood amendment to the Clarke amendment will not carry out our platform promise, but that it legalizes transactions on the exchanges. It provides a tax of 50 cents per hundred bales in the nature of an excise tax on all exchange deals, and it thereby places the legitimate dealer who desires a delivery of actual cotton on the same footing with the gambler who makes his purchase, knowing that there will be no delivery of actual cotton demanded.

The farmers are not opposed to an actual purchase of their products, whether the same take place on the exchange or on the street, but they object to a fictitious sale of their crop ten times over during the season. The best statistics obtainable indicate that more than 100,000,000 bales of cotton are sold on the New York Exchange during each season and one-half that many on the New Orleans Cotton Exchange, making a total of 150,000,000 bales sold on the stock exchanges, as against an actual production of 15,000,000 bales. I am not in favor of compromising with gambling on agricultural products by licensing it. I shall vote on every occasion presented to carry out to the remotest letter every promise we made the people in our Baltimore platform. When the currency bill was before this House I voted to amend it by inserting a provision that prevented banks from loaning money to be used in gambling on farm products. I think the evil could have been destroyed had that amendment been adopted. It was lost, however, and I shall at this time vote for the Clarke amendment, because, in my judgment, it will effect a destruction of this evil.

We do not license poker playing and other gambling devices. Be not deceived, the American farmer will not be fooled by voting down the Clarke amendment, which destroys gambling in cotton futures, and voting up the substitute provision which legalizes and licenses gambling in cotton futures and bids the Wall Street stock jobber and speculator, who never saw a bale of cotton, do his worst.

Mr. Speaker, the stock exchange, which is but another name for the bucket shop, is a place where an agreement is made whereby the seller is to deliver and the purchaser to accept a certain number of bales of cotton at some future time, the price being agreed on at the date of the contract, with the knowledge on the part of both seller and purchaser that the contract is a fake and a fraud, and that no cotton is going to be actually delivered when the time for its delivery under the contract arrives, but that the party who has bet wrong on the price at that time, whether he be seller or purchaser, will pay the other party the difference between the price on that date at which he agreed to purchase or sell, as the case may be, the cotton and the actual price of spot cotton at that time and place. It is a bet pure and simple by the seller that the price on a certain day is lower than the other party to the contract says it will be.

There is no difference whatever between this gambling and a bet on the value of a poker hand or the swiftest horse on the track. It is even more demoralizing than either of the other forms of gambling, for it touches and is indulged in by a greater number of our citizenship, and is given an air of respectability by going under such high-sounding names as "dealing on the board of trade," or "purchasing on the stock exchange." The principle is the same and the effect is the same, whether it is carried on in the back room of a pool hall where you find installed a telegraph instrument, an operator, and a cigarette, or around the sumptuous board of the so-called New Orleans or New York exchanges, where the value of a seat ranges all the way from $40,000 to $100,000. No matter where this infernal thing is carried on the participants are gambling on the labor of millions of our citizens and depressing the price of the products of their toil.

The farmers of Oklahoma are among the most progressive, the most industrious, and the most critically thinking people in all this world. They are investigating economic subjects, and they have come to know that in the past they were compelled to sell their products on a free-trade market in competition with the producers of all the world, and they were likewise compelled to make their purchases on a protected market with competition fenced out, the price of their products forced down, while the price of their purchases was forced up. The tariff bill just passed by a Democratic Congress and signed by a Democratic President goes a long way toward relieving the injustice that has been done the great producing masses in the past. This bill places sugar, tea, coffee, salt, shoes, agricultural implements, such as plows, tooth and disk harrows, headers, harvesters, reapers, drills, planters, mowers, horserakes, cultivators, thrashing machines, cotton gins, wagons and carts, cotton bagging and ties, whether manufactured from jute, jute butts, or cotton tares, Bibles, woolen and cotton blankets, sewing machines, typewriters, shoe machinery, cream separators, linotype and all typesetting machines, coal, coke, drugs, gloves, ice, iron ore, leather used in the manufacture of boots and shoes, harness and saddle leather, needles, newspapers and periodicals, printing paper, quinine, and barbed wire on the free list, and the duty on woolen clothing was reduced from 79 to 35 per cent, or more than 100 per cent, and on woolen dresses for women and children from 99.07 to 35 per cent, or nearly 200 per cent, which enables the farmer to purchase on a market where the wits of the world are permitted to compete. This will result in saving multiplied millions of dollars every year to the great producing masses of the country.

They are entitled to the same kind of treatment in the matter of currency that is extended to the commercial, the manufacturing, and the corporate interests of the country. They are entitled to a farm-credit system that will permit them the use of the currency of the country at the same low rate of interest that it is furnished to all other classes and industries. If the banking and currency system contained a provision which would do full justice to the great producing masses of the country, bucket shops, stock exchanges, agreements in restraint of trade, and all other combinations and monopolies would have little effect on their prosperity. The great trouble with which the producers are face to face, and which must be solved before permanent and lasting prosperity will be theirs, is the matter of the sale of their products. By reason of our present banking and currency system and the fact that it contains no provision which extends them long-time loans at a cheap rate of interest, forces them to dump onto the market their products as the same are gathered, thereby glutting the market and forcing down the prices. If they could secure money easily, cheaply, and on long time, they would be enabled to withhold from the market the products of their labor and toil and dispose of it as the law of supply and demand required. As it is, the 15,000,000 bales of cotton produced are disposed of in the period of about four months. If the farmers could withhold this cotton and dispose of it during the entire 12 months of the year, they would secure, as they ought to secure, the enormous profits that are now going into the pockets of the middlemen.

The farmers are also demanding that interlocking directorates, which places the control of the money of the country in the hands of a few men, thus enabling them to raise or lower the price of farm products, be legislated out of our business life.

The farmers also demand that gambling in farm products shall cease. On the 6th of September, this year, less than a month ago, at a meeting of the National Farmers' Union held at Salina, Kans., in a resolution they declared:

Whereas gambling in cotton and other farm products is a vicious, immoral evil that has been fully investigated and reported upon by congressional committees and executive branches of the Federal Government as well as testified to time and again before our national lawmakers; and

Whereas such gambling in farm products threatens the very foundation of our financial and business and commercial prosperity, and should be abolished, not licensed or legalized by an internal-revenue duty short of one that would actually destroy: Therefore be it

Resolved by the Farmers' Educational and Cooperative Union in national convention at Salina, Kans., representing over 3,000,000 farmers, That we urge the abolition of gambling and certain commercial different practices and fraudulent transactions on the exchanges by which the prices are regularly depressed during the harvest seasons and run up 50 and 60 per cent later, and that some such bill as has passed the lower branch of Congress repeatedly and is now before the Senate and House be passed.

This great organization, representing more than 3,000,000 farmers, knows the blighting effect of market juggling and gambling on exchanges in the products of their toil.

I call attention to a comparison of the spot price of middling cotton with the closing bid price of future contracts for the spot month on the New York Cotton Exchange, Fridays, September, 1905, to April, 1908, as the same is reported by the Commis-

sioner of Corporations of the United States for the year 1908, as follows:

[1] Wednesday's quotations. No closing future price quoted for Friday or Thursday.

[2] Thursday's quotations. No closing future price quoted for Friday.

This statement shows the future market during the nearly three-year period covered by this report to be from $2 to $10 less per bale than the spot market on the same days. To my mind this table of figures is absolutely conclusive of the depressing effect of dealing in futures on the stock exchanges.

Since the Clarke amendment was proposed in the Senate on two separate occasions the value of cotton has been reduced from $2 to $3 per bale, and this in the face of the fact that the amendment by its own terms does not go into effect until September 1, 1914. Any combination or institution that has the arbitrary power to reduce the price of farm products at its own unbridled will, as it has been demonstrated the New York Cotton Exchange has, ought to be legislated out of existence. There can be no justification for compromising with it and licensing it to further prey on the labor and toil of the American farmer.

Mr. Speaker, the passage by this House of the Underwood amendment, which legalizes and licenses gambling in cotton futures, in lieu of the Senate provision, which will destroy gambling in cotton futures, will, in my judgment, result in no legislation on this subject at this session of Congress. The gamblers and stock jugglers will be permitted to go on fleecing the farmers of our country out of hundreds of millions of dollars yearly. For 20 years the toilers of this country have been asking for this relief. Be it said to the credit of many who have occupied seats in this House, and many who occupy seats here at this time, that a continuous and determined fight has been waged to relieve the farm products of the strangle hold of the gamblers. Bills have been introduced having for their purpose the destruction of gambling in futures. The Hatch bill passed the House and Senate in the Fifty-third Congress, 20 years ago, but never became a law. The Scott bill passed the House in the Sixty-first Congress, but failed of passage in the Senate. The Beall bill passed the House in the Sixty-second Congress, but failed of passage in the Senate. All three of these measures would have effectually destroyed speculating in cotton futures on the exchange.

We now have an opportunity, by accepting the Senate amendment, to destroy this evil. Will we do it or will we vote for the substitute, which will result in no legislation on this subject and leave the farmer at the mercy of the speculator?

Preelection Promises Carried Out.

EXTENSION OF REMARKS
OF
HON. CLYDE H. TAVENNER,
OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, September 30, 1913,

On the conference report to the bill (H. R. 3321) to reduce tariff duties and to provide revenue for the Government, and for other purposes.

Mr. TAVENNER. Mr. Speaker, I believe I can make at least one statement in connection with the revision of the tariff that no one will contradict, and that is that in passing the Underwood-Simmons bill, which reasonably reduces the iniquitous Payne-Aldrich rates on everything and places many of the necessaries of life on the free list, we have carried out our preelection promises to the letter.

No greater compliment can be paid a man in public life than that it may be truthfully said of him he did after election precisely what he promised the people before election he would do.

Campaign after campaign the politicians have been promising the people to do certain specific things, each time forgetting the promises as soon as they were safely elected, pretending that the people had misunderstood their platform or had placed a wrong construction on their statements from the stump.

PEOPLE WERE LOSING CONFIDENCE IN ALL POLITICAL PARTIES.

Things had come to a pass where the masses of the people had begun to lose all confidence in platforms and election promises. They considered them a joke. In the course of my campaign for Congress last fall, while meeting hundreds of voters every day and having the opportunity of talking to them and learning their sentiments, I could not help but be impressed by the lack of confidence the average man seemed to have in the platform promises of all parties. The average man appeared to feel it made little difference what promises the various political platforms contained, because the party promising the reforms would not carry them out even if it was successful.

At the very outset of my campaign I resolved to state exactly where I stood on the big issues, and determined that, if elected, I would conscientiously endeavor to carry out every promise I had made to the people in order to be elected.

The tariff was one of the principal issues in the last campaign, and on this subject I said:

AS TO WHERE I STAND.

I am a Democrat and stand on the platform adopted by the Baltimore convention, not a single line of which was dictated by any trust or special privilege.

But while I am a devoted Democrat I am not a bidebound partisan, and in my newspaper articles from Washington I have always advocated the principle of "more patriotism and less partisanship."

There are many patriotic men on the Republican side of the House of Representatives, and I would no more cast my vote against a good measure simply because it emanated on the Republican side than I would cast my vote for a bad bill simply because it originated on the Democratic side.

I believe I can serve the Democratic Party best by serving the people best.

MY TARIFF ATTITUDE.

Protection as it is being played at the present time is simply a business transaction between a few multimillionaire tariff magnates and a few politicians. The tariff magnates contribute hundreds of thousands of dollars to the campaign funds of the party of protection purely as a business proposition.

There is an explicit understanding between the trust magnates and the politicians to the effect that if the protectionist party is successful its Representatives in Congress will maintain tariff rates so high that the tariff trusts will be able to extort from the people in increased prices not only the amount of the campaign contributions, but enormous dividends on watered stock as well.

At the present time the attorneys for the tariff trusts write their own tariff rates, and, naturally, they write them in the interest of the tariff trusts and not in the interest of the people.

The tariff schedules should be written by the representatives of the people for the mutual welfare of both consumers and workers and manufacturers.

I believe in an honest downward revision of the tariff, with greatest reductions on sugar, woolens, cottons, lumber, agricultural implements, etc., in order that the ever-increasing cost of living may be reduced.

I would not favor a revision of the tariff that would injure any legitimate industry in my district. No one outside of an insane asylum would want to do that.

I simply believe that the tariff should be reduced in the interests of the masses instead of in the interest of only a comparative handful of men who are already rich beyond the dreams of avarice.

The Underwood-Simmons bill, I submit, is a complete fulfillment of the above preelection tariff promises. We have kept faith with the people and accomplished after election what we promised to do in order to be elected.

A half-century fight has been ended—victoriously for the people. The Underwood-Simmons law now goes forth to be judged by the country. So strong have been the classes against the masses, so powerful entrenched privilege against the people, for these decades that this is the first honest downward revision since the Civil War, the first time that tariff revision has not been a betrayal and a scandal.

LOBBYISTS DRIVEN WHOLESALE FROM WASHINGTON.

It will be recalled that in spite of the fact that we were pledged to the people to revise the tariff downward a horde of tariff lobbyists were on hand when Congress met, ready and prepared to deprive the people of a well-earned victory. But instead of receiving the reception they had been accustomed to they were promptly set upon by President Wilson and driven en masse from the Nation's Capitol. The result is that for the first time in many years there will be a tariff law on the statute books that was really framed by the representatives of the people instead of the representatives of the tariff trusts.

To all practical ends the Underwood-Simmons bill provides an average of lower taxation than any bill presented in three-quarters of a century. The Wilson law carried an average rate of 39.95 per cent; the average rate of the Payne-Aldrich law was 40.12 per cent; the Underwood-Simmons bill averages about 26 per cent.

Throughout the bill is framed on the theory that luxuries should bear the heaviest duties and the necessaries of life the lightest duties. Many necessaries have, as a matter of fact, been placed on the free list. Recognizing the economic importance of the American home, an earnest endeavor has been made in this bill to lighten the burdens upon the American family.

INCOME-TAX PLEDGE ALSO FULFILLED.

During the campaign I declared if elected that I would do everything within my power to obtain the passage of a bill taxing incomes. On this subject I said:

I believe in the passage of an income-tax bill which will require the rich to bear a fair proportion of the burden of taxation, which they are not now doing. It is not just that the men who own 90 per cent of the wealth of the United States should shoulder but 10 per cent of the burden of taxation. That is the condition at the present time.

This promise, like the pledge to revise the tariff downward, has been fulfilled. True to our promises, we have placed an income-tax law on the statute books.

In my opinion the income tax is the greatest victory that the masses of the people in this country have won since the Civil War.

Under this bill a man will be taxed according to his ability to pay. If he has a small income he will pay a small tax, and if he has a large income he will pay a large tax. John D. Rockefeller, for instance, on an estimated personal fortune of $500,000,000 and an estimated annual income of $50,000,000, would pay an annual tax of more than $2,000,000. Heretofore Mr. Rockefeller has paid little if any more toward defraying the expenses of the National Government than the poor man with a large family. Under the Payne-Aldrich law everything the people eat, wear, and use is taxed, but there is no tax whatever on wealth or incomes. This is not just.

WHAT CHAMP CLARK SAID.

I believe that what CHAMP CLARK, that great man who is Speaker of this body, said in reference to the income tax strikes the nail on the head. He said:

One great thing that this bill will do, and I congratulate the gentleman from Tennessee [Mr. HULL] on that most cordially, is that it will introduce into the taxing system of this country the proposition that we will tax what a man has instead of what he has to buy to live on. I refer to the income tax. I will debate that proposition with any man living, with the absolute certainty of coming out on top.

I believe as firmly as that I am living that on a sealed ballot, so that nobody could ever find out how you gentlemen over on the Republican side would vote, nine-tenths of you would vote for the income-tax proposition in this bill.

I will tell you what else I believe. I believe if you had a plebiscite, as Louis Napoleon used to call it, or secret vote, 95 per cent of the people of the United States would vote for the income-tax proposition in this bill. Just as certain as you live that is coming to stay, and the people will magnify the name of Hull in the days to come. If you gentlemen on the Republican side ever get into possession of the Government again you will no more dare to repeal the income tax than you would attempt to jump off the top of the Capitol. The people will not permit it.

PROVISIONS OF INCOME-TAX LAW.

Under the provisions of the income-tax law unmarried persons will be taxed on their incomes in excess of $3,000 and married persons, living with their life partners, will be taxed on their incomes in excess of $4,000. Single persons having an annual income of less than $3,000 and married persons with an income of less than $4,000 will not pay any tax under this bill.

The rate of taxation increases with the income, as follows:

	Per cent.
$3,000 to $20,000	1
$20,000 to $50,000	2
$50,000 to $75,000	3
$75,000 to $100,000	4
$100,000 to $250,000	5
$250,000 to $500,000	6
More than $500,000	7

Estimated income tax for the year 1915.

Incomes.	Number of incomes.	Rates.	Tax.
$3,000 to $4,000	75,000	1 per cent	$375,000
$4,000 to $5,000	126,000	....do	630,000
$5,000 to $10,000	178,000	....do	5,340,000
$10,000 to $15,000	53,000	....do	4,240,000
$15,000 to $20,000	24,500	....do	3,185,000
$20,000 to $25,000	10,500	1 and 2 per cent	2,100,000
$25,000 to $50,000	21,000	....do	9,660,000
$50,000 to $75,000	6,100	1, 2, and 3 per cent.	6,832,000
$75,000 to $100,000	2,400	1, 2, 3, and 4 per cent.	4,776,000
$100,000 to $250,000	2,500	1, 2, 3, 4, and 5 per cent.	13,775,000
$250,000 to $500,000	550	1, 2, 3, 4, 5, and 6 per cent.	8,805,500
$500,000 to $1,000,000	350	1, 2, 3, 4, 5, 6, and 7 per cent.	13,653,500
Over $1,000,000	100	....do	9,301,000
Total	500,000		82,673,000

This table shows that the income-tax returns will amount to approximately $83,000,000 annually. Every cent of this is new revenue to the Government. Heretofore those who owned 90 per cent of the wealth of the United States contributed but 10 per cent of the burden of taxation. As a result of the income-tax law, however, those who own 90 per cent of the wealth will be required to stand a larger proportion of the tax burden.

A THIRD PLEDGE BEING CARRIED OUT.

The tariff is not the only agency that has to do with the ever-increasing cost of living in the United States. Overcapitalization also plays its part. In my campaign I repeatedly called attention to this fact and declared that if elected would work to obtain a physical valuation of the railroads, telegraph lines, and other public-service corporations. A good start has already been made toward carrying out this third preelection promise, as is also the case in connection with the pledge to revise and improve the currency system.

One hundred dollars annually is the amount the crime of overcapitalization, or watered stocks, costs every American family.

This statement can be demonstrated by a little arithmetic. Various prominent financial students and authorities are responsible for the statement, and their conclusions are wholly sustained by reports of the United States commission and the published figures of the national corporation tax returns, that about $30,000,000,000 of the stocks of railroads and tariff trusts represent only water. On this stock, dividends of about $1,500,000,000 are being paid yearly, amounting to approximately $18 a person, or nearly $100 per family.

Now, this $1,500,000,000 is not picked up out of the streets. Where, then, does it come from? The answer is: From the pockets of the consumers. There is not a dollar of "water" or inflation in the capitalization of corporations that does not impose burdens upon consumers and producers.

Congress has just appropriated an additional $300,000 to enable the Interstate Commerce Commission to make a physical valuation of the 250,000 miles of railroad in the United States.

Of course $300,000 will be but a drop in the bucket compared to the huge sum that will be necessary to finance this colossal task.

But the enterprise will be worth to the people every penny that it is going to cost them. When we know the actual value of the railroads we will then know what is a fair freight and passenger rate. The Supreme Court held in the Nebraska Rate case that one of the principal elements to be taken into consideration in determining the reasonableness of a rate is the value of the equipment used in the transaction. As the Interstate Commerce Commission does not know the actual physical value of a single railroad, it must simply guess at what is a fair rate.

That the average railroad is overcapitalized from 25 to 50 per cent there is little doubt.

Here is a sample illustration out of a multitude which could be cited if space permitted. The Chicago & Alton was capitalized at $30,000,000. When turned over to the purchasing syndicate in 1899 it was capitalized at $94,000,000.

When we buy a railroad ticket we are not only paying interest on money actually invested, but principally interest on the water in the railroad stocks and bonds.

Overcapitalization also causes many lives to be needlessly taken every day. This is because the railroads have such a hard time paying interest on their heavily watered stock that they neglect to keep their equipment in proper repair. The result is, wrecks occur, many of them needlessly.

The plan of the commission, which is to make a physical valuation of all the railroads, provides for five main engineers. Each of their engineers is to be in charge of a district embracing one-fifth of the total railway mileage, or about 50,000 miles of railway.

Each mile of railway is to be surveyed and appraised. They are to appraise it by what they call field parties. Each field party will have in it five squads, and they will have at the head of each squad an engineer. Each one of these squads is to make an actual physical survey of railroad property.

Each squad, it is estimated, can view physically about 2½ miles of property per day. The size of the squads may be increased or their number may be increased to expedite the work.

OPEN CAUCUS V. SECRET CAUCUS.

Discussion of the open caucus versus the secret caucus seems to be raging over the country like a blizzard of words.

Personally I believe in the principle of the open caucus. I have voted for the open caucus whenever I have had the opportunity to do so.

Looking at the subject from my own personal viewpoint as a legislator, I can see no reason why I should prefer a secret caucus to an open caucus. On the other hand, however, I can see many reasons why it is to my advantage to be in an open caucus.

Members of Congress are merely employees or paid representatives of the people, and it seems to me that the people have a perfect right to know what they do.

Neither the secret caucus nor the binding rule of a caucus seem to me to be desirable or advisable, and should be prohibited either by law or by the rules of the House of Representatives.

OPEN CAUCUS BOTH USEFUL AND NECESSARY.

However, it would be a great mistake to assume from this that there should be no open caucus or conference by party representatives. It is necessary for those who are working to a common end to get together and confer on a plan of action, but as long as this caucus or conference is to be for the people and in the interest of the people, I can not understand why there should be any desire to prevent the representatives of the people from being present.

WHAT A LEGISLATIVE CAUCUS IS.

The legislative caucus is a conference of the friends or the opponents of a pending measure to bring about united action and to make effective their strength to secure the passage or defeat of such measure.

The movement to cure the evils of present-day legislative methods by abolishing such conferences is a misguided and ill-directed effort. The abuses to be corrected are not found in organization for concerted action, but result from the secrecy of action and the binding rule, which have no place in legislative procedure.

The numerous members of a legislative body deprived of the means of concerted effort would be powerless to advance reform, to resist encroachments upon popular rights, to move with effective force in obedience to popular will, or even to act at all.

While a majority of the members of a legislative body may favor the same policy or be actuated by a common purpose and intent, yet there will be found almost as many different views respecting the form in which the same should be enacted into law as there are individual members supporting such policy.

The success of a measure before a legislative body is therefore largely dependent upon the ability of its friends to harmonize their different views and unite on a common line of support.

Any organization, however, is open to the criticism that it contains possibility of danger. We see perfect political organizations controlled by evil elements in the great cities. But the late Tom L. Johnson, of Cleveland, had a political organization or machine as all-powerful as Tammany ever could be; but Johnson used his organization for good, and accomplished things for the people which could not have been accomplished without his machine. And so the people of Cleveland, one of the most enlightened municipalities on earth, elected Johnson and his organization for term after term.

The individual support of members of a legislative body without a concerted plan of action may not only be of little avail to advance a pending measure, but the friction of different means and methods pursued at the same time to reach a common end may have the effect to neutralize the efforts of all.

The efficiency of a large body of men depends largely upon their organization. There must be organization, some method of averaging individual opinions and welding them into a compromise and composite policy in which all can unite. Even the Progressives, those fighting against the Democratic caucus, can scarcely deny this fact. For the Progressives themselves are acting in a similar manner. They have conferred, agreed upon a plan of action, and they are now engaged in carrying out their legislative plan with singleness of purpose. The Socialist Party offers an example of the closest organization known to politics. The Democratic caucus is the organization, the machinery adopted by the party for carrying out its program.

The Democratic caucus is dominated by men who have the interests of the people at heart. The caucus in this instance has been used for the welfare of the people. There is no complaint to be made on the score of the character of legislation resulting from the Democratic caucus. The best legislation has been turned out of this caucus that the American people have had in three-quarters of a century. The only issue is the necessity and advisability of the secret caucus, and the binding rule.

UNORGANIZED FORCES ALWAYS WEAK.

Even if a legislative policy may be substantially promoted by individuals acting independently, this could only be where such policy was without formidable opposition, for organized opposition would compel united action to meet the same as a matter of defense alone.

Without such concerted action, a majority would be as chaff before an organized minority. The will of the majority would be defeated, and a minority would rule instead.

The masses of the people and their representatives have always possessed the power to rule. Their cooperative strength is and always has been an irresistible force under our form of Government. They have failed only for want of organization and concerted action, and they can not hope to rule without such action. It is especially in the interest of the masses of the people that the means for organization for united action be enlarged and safeguarded rather than destroyed.

The representatives of the people have nothing to conceal and no advantage to gain by secrecy in their legislative conferences, and even if secrecy could be made an advantage it could not be obtained in a movement promoted by the masses of the people.

In the very nature of things, all movements originating with the people and to be carried out by their representatives are matters of general public knowledge and impossible of concealment.

Instead of an advantage secrecy is a positive disadvantage. While secrecy fails to cover the movements in legislative bodies representing the general welfare of the people, yet it does enable selfish interests, by reason of the limited number of persons concerned and participating, to conceal their systems of control from public view, and thus afford such interests the advantage of concealing their own operations while profiting by a full knowledge of all opposing movements.

LAW SHOULD PROHIBIT SECRECY.

Instead of the rights of the representatives of the people to organize for concerted effort being prohibited, such rights should be recognized and safeguarded to them by positive law.

The law should supplant the secret, binding caucus with the open legislative conference, safeguarding the Members to act free in response to the will of their constituents and in good faith with their platform pledges to the people.

Other disadvantages of secrecy to the representatives of the masses are that it both subjects them to the suspicion of their friends and to the misrepresentation of their enemies without means of correction or defense.

DEMOCRATIC PARTY IS PROGRESSIVE.

The Democratic Party is the first party in power to take an advance step toward publicity and freedom of action in the legislative caucus. It has made substantial progress toward these reforms by exempting Members from the binding rule where they have pledged their support or have received instructions to act otherwise, and by providing for a public record vote under the same rules and requirements as such vote is provided for in the House of Representatives.

DEMOCRATS WHO VOTED FOR OPEN CAUCUS.

Representative VICTOR MURDOCK, of Kansas, the brilliant leader of the Progressive Party, while speaking on the floor of the House of Representatives, in part, said:

I realize that there is a considerable group of men in the Democratic Party who are fighting to open up the Democratic caucus to the public. They have my heartiest commendation for their efforts. I congratulate them. The vote they cast in the Democratic caucus on April 8, 1913, is one of the most important votes of the present session. Fortunately, and unlike most of the votes in the caucus, it was a recorded vote and, under the rules of the caucus, is available to the public. The proceeding in the caucus was as follows when the question of open caucus came up April 8, 1913. The following resolution in caucus was offered by Mr. SHACKLEFORD:

"*Resolved*, That this caucus shall be open to the press, to the President, to the Senators, and to the Cabinet officers, and that the President, the Senators, and the Cabinet officers may occupy seats upon the floor."

The following substitute resolution was offered by Mr. CARLIN:

"*Resolved*, That hereafter all Democratic caucuses or conferences, when called either by the membership or by the chairman of the caucus, shall be open to the public."

Mr. HAY moved that both resolution and substitute be referred to a committee of three, to be appointed by the Chair, this committee to report later.

Mr. THOMAS moved that both resolution and substitute be tabled, which motion carried by a vote of 167 to 84.

Those who voted "nay"—that is, those who voted for the open caucus—were:

"Abercrombie, Allen, Aswell, Bailey, Bathrick, Borchers, Bowdle, Brockson, Broussard, Brown of New York, Brumbaugh, Buchanan of Illinois, Bulkley, Candler of Mississippi, Carlin, Casey, Collier, Connolly of Iowa, Cox, Crosser, Cullop, Deitrick, Dershem, Dickinson, Donohoe, Doolittle, Dupré, Elder, FitzHenry, Floyd of Arkansas, Foster, Garrett of Texas, Gordon, Hammond, Hardy, Harrison of Mississippi, Harrison of New York, Hayden, Helvering, Henry, Hobson, Hoxworth, Kenting, Kindel, Kinkead of New Jersey, Lazaro, Lee of Pennsylvania, L'Engle, Linthicum, Maguire of Nebraska, Morgan of Louisiana, Murray of Massachusetts, Murray of Oklahoma, Oldfield, Palmer, Pepper, Phelan, Quin, Rainey, Raker, Reilly of Connecticut, Roddenbery, Rubey, Rucker, Scully, Seldomridge, Shackleford, Sharp, Sims, Sisson, Smith of New York, Smith of Texas, Stephens of Mississippi, Stone, Stout, Stringer, Talcott of New York, Tavenner, Taylor of Arkansas, Taylor of Colorado, Thompson of Oklahoma, Walsh, White, and Wingo."

This list should also include Representative FINIS GRAY, of Indiana, who is a consistent advocate of the open caucus.

The Tariff.

EXTENSION OF REMARKS
OF
HON. JAMES S. DAVENPORT,
OF OKLAHOMA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, September 30, 1913,

On the bill (H. R. 3321) to reduce tariff duties and to provide revenue for the Government, and for other purposes.

Mr. DAVENPORT. Mr. Speaker, I feel it my duty to express my views in a limited way upon the question of the labor that has been performed in preparing and submitting this bill to Congress. Many weeks have been consumed by both Houses in carrying out the promises of the Democratic Party made to the people before the last campaign, and now the bill is before this House for final action.

To my mind it is one of the best bills that has ever been written upon the tariff question. Every promise made to the American people prior to the election will have been fulfilled so far as tariff for revenue is concerned. There have also been many wise provisions with reference to placing articles upon the free list. I am glad to know that I have been permitted to cast my vote for putting lumber upon the free list; also I am proud of the fact that we have extended to the American farmer a right to purchase his agricultural implements in a free market. All machinery and implements used by the American farmer can under the provisions of this bill be purchased without paying any tariff duty. But as there has been so much said with reference to this bill it is not necessary for me to deal at length upon its many provisions that, to my mind, will work a benefit to the toilers of the United States.

One amendment that was placed in the bill by the Senate has been left by the conferees to be considered by this House; that is, the amendment known as the Clarke amendment, taxing stock gambling or gambling in futures. I am heartily in favor of some kind of a provision similar to the Clarke amendment, yet I fear that the one-tenth of 1 per cent imposed upon the purchase as provided by the Clarke amendment will not be sufficient to put the stock gamblers out of business. The amendment now pending before the House and offered by the gentleman from Alabama [Mr. UNDERWOOD] has some very good features in it, yet I fear that if this House should adopt the Underwood amendment as an amendment to the provision known as the Clarke amendment that that means there will be no legislation at this session of Congress upon the subject of preventing gambling in futures. This House is pledged and committed to the proposition of stamping out gambling in farm products, and for many years repeated efforts have been made by different Congresses to pass a bill that would prevent gambling in agricultural products. In the Sixty-first Congress the Scott bill was considered and passed by an overwhelming

majority. In the Sixty-second Congress we had the Burleson bill. The other bills heretofore considered by Congress aiming at the suppression of stock gambling in farm products and the amendments now pending to the bill under consideration seek the same object. If I had my own way I would make the penalty more severe than the Senate amendment, and I would make the penalty so severe that it would entirely prohibit gambling upon the stock exchange. Instead of placing the rate at one-tenth of 1 per cent, which to my mind is nothing more nor less than a license permitting them to gamble, I would place it at 10 per cent or higher in order to stamp out entirely the evil that is complained of so much throughout the United States. Both of the amendments pending are a step in the right direction, yet in my judgment neither goes far enough, and I do not believe that the provisions of either of the amendments pending are sufficiently severe to prohibit the evil sought to be killed, yet all parties agree that gambling on future products is an evil that is detrimental to the best interests of the American farmer.

Taking the two amendments together, I have reached the conclusion that if the Underwood amendment is adopted by this House, which I believe it will be, that that means no legislation upon the subject of stock gambling at this extra session of Congress, and for that reason I feel it my duty to express myself upon this subject and to say that I shall be compelled to vote, when the time comes, to recede from the disagreeing vote of the House to the Senate amendment; and then I shall vote against the amendment offered by the gentleman from Alabama [Mr. UNDERWOOD], and if given an opportunity will vote for the Clarke amendment, as I believe this the only method by which we can obtain legislation at this session of Congress. I predict now that if the Underwood amendment is adopted as a substitute or an amendment to the Clarke amendment by this House that when it goes back to the Senate the Senate will refuse to concur, and that will in effect take the provision out of the bill entirely, and the result will be that no legislation upon stock gambling will be passed at this session of Congress, and the people will have to wait until some future date for such legislation; and judging the future by the past it would be difficult now to predict when it would be possible to get an independent bill through Congress and up to the President for his approval.

If I am not mistaken, this subject has been considered by different Congresses for more than 20 years, and under some subterfuge or another each time the bill has been sidetracked or prevented from becoming a law by the rules of the House or some peculiarly unknown manipulation of parliamentary law. I am heartily in favor of a law that will prohibit dealing in futures, one that will compel the party selling to deliver in kind of products sold at the time he agrees to deliver in his contract of sale, and I sincerely trust that the Members of this House may feel as I do upon the subject and cast their votes so that we may have an opportunity to accept the Clarke amendment.

The Tariff.

EXTENSION OF REMARKS
OF
HON. GILBERT N. HAUGEN,
OF IOWA,
IN THE HOUSE OF REPRESENTATIVES,
Tuesday, September 30, 1913,

On the bill (H. R. 3321) to reduce tariff duties and to provide revenue for the Government, and for other purposes.

Mr. HAUGEN. Mr. Speaker, it was generally believed when the House bill passed with its numerous unjust and unfounded discriminations against the producers of farm products in the Northwest that no further injustice would be inflicted; yet, in looking over the Senate report I find that it contains this language:

> In an effort to mitigate the high and rising cost of living, the House bill placed on the free list a number of agricultural commodities. The Committee on Finance has placed on the free list additionally live animals used for food purposes, wheat, eggs, lard compounds, and lard substitutes. In a number of instances it has recommended further reductions in the House rates, such as on butter, cheese, peas, meat extracts, cocoa, currants, and other articles of minor importance. It has restored a duty on oatmeal and rolled oats, making it 33 cents per hundredweight, or one-third of the existing rate, and has increased the duty on rice used for fermentation purposes from one-eighth of a cent, as provided in the House bill, to one-fourth of a cent per pound.
>
> The Senate committee has placed for revenue purposes a duty of one-tenth of a cent per pound on bananas. Bananas are admitted free under the existing law, and were left on the free list in the House bill.
>
> The fundamental amendments proposed by the Senate committee to Schedule J consist in transferring hemp, tow of hemp, flax, and tow of flax, hackled, etc., to the free list. These amendments are strictly in line with the general purposes and objects of the revision, and bring hemp and flax into line with all other textile raw materials.

Next, when I turn to the comparison of rates of H. R. 3321 as passed by the House and as amended by the Committee on Finance, I find that the following changes have been made:

Comparison of rates.

SCHEDULE G.—AGRICULTURAL PRODUCTS AND PROVISIONS.

Paragraph.	Article.	House rate.	Senate rate.
188	Cattle	10 per cent	Free.
189	Horses and mules valued at $200 or less per head.	$15 per head	10 per cent.
190	Sheep	10 per cent	Free.
196	Oats	10 cents per bushel	6 cents per bushel.
	Oatmeal and rolled oats	Free	33 cents per hundredweight.
	Oat feed	15 per cent	9 cents per hundredweight.
197	Rice for fermentation purposes.	¼ cent	¼ cent.
198	Wheat	10 cents per bushel	Free—subject to countervailing duty.
200	Butter and butter substitutes.	3 cents per pound	2½ cents per pound.
201	Cheese and cheese substitutes.	20 per cent	Do.
203	Beets	10 per cent	5 per cent.
208	Eggs	2 cents per dozen	Free.
	Frozen eggs	2½ cents per pound	2 cents per pound.
	Liquid egg albumen	3 cents per pound	1 cent per pound.
209	Blood, dried, soluble	1½ cents per pound	Free.
214	Peas	15 cents per bushel	10 cents per bushel.
	Split peas	25 cents per bushel	20 cents per bushel.
	Peas in small packages	¼ cent per pound	½ cent per pound.
215	Greenhouse plants	25 per cent	Free.
217	Linseed	20 cents per bushel	15 cents per bushel.
	Seed, n. s. p. f.	10 per cent	5 cents per pound.
223	Currants	2 cents per pound	1 cent per pound.
227	Bananas	Free	⅒ cent per pound.
233	Meat extracts, n. s. p. f.	15 cents per pound	10 cents per pound.
	Fluid extracts of meat	7 cents per pound	5 cents per pound.
236	Cocoa, manufactured and sweetened chocolate, valued between 15 and 20 cents per pound.	25 per cent	2 cents per pound.

SCHEDULE I.—COTTON AND MANUFACTURES.

255	Cotton thread, yarns, etc., not bleached, mercerized, etc. (between Nos. 80 and 99).	20 per cent	22½ per cent.
257	Cotton cloth, unbleached and not mercerized (between 80 and 99).	22½ per cent	25 per cent.
261	Cotton collars and cuffs	25 per cent	30 per cent.
	Cotton gloves	35 per cent	45 per cent.
267	Bandings, bellings, bindings, etc.	25 per cent	30 per cent.

SCHEDULE J.—FLAX, HEMP, AND JUTE, AND MANUFACTURES OF.

272	Flax, undressed	½ cent per pound	Free.
273	Flax, dressed	1½ cents per pound	Do.
274	Tow of flax	½ cent per pound	Do.
275	Hemp, and tow of hemp	1½ cents per pound	Do.
	Hackled hemp	½ cent per pound	Do.

SCHEDULE N.—SUNDRIES.

342	Ramie hat braids	15 per cent	40 per cent.
347	Shell and pearl buttons, over 26 lines.	40 per cent	25 per cent.
	26 and less	do	50 per cent.
	Agate buttons	do	15 per cent.
358	Fur, wearing apparel of other than domestic animals.	50 per cent	45 per cent.
370	Leather toilet sets and similar articles.	30 per cent	40 per cent.
373	Women's leather gloves	$2 per dozen pairs	$2.50 per dozen pairs.
	Men's leather gloves	do	$3 per dozen pairs.
376	Manufactures of amber and gut.	10 per cent	20 per cent.
379	Manufactures of mother-of-pearl, shell, hard rubber, etc.	25 per cent	15 per cent.
380	Masks	20 per cent	25 per cent.
388	Pencils valued less than $1.44 per gross.	25 per cent	36 cents per gross.

In looking over the conference report I find the following Senate amendments reducing the duty on products of the Northwest:

SCHEDULE G.—AGRICULTURAL PRODUCTS AND PROVISIONS.

Cattle, sheep, and other domestic animals suitable for use as food, wheat and wheat products, and eggs have been transferred to the free list.

Reductions have been made on oats, butter, beets, frozen eggs, peas, greenhouse stock, Zante currants, chocolate and cocoa sweetened, and extracts of meat from the rates provided by the House.

The rates have been increased over those provided by the House on broken rice, fish packed in oil, and ground spices. A rate of 20 per cent ad valorem is placed on ground spices in addition to the specific rate provided by the House on spices ground or unground.

The Senate receded from the reduced rate placed on flaxseed and its amendment placing a duty on bananas.

The House classification on lemons and other citrous fruits is accepted.

It will be observed that the bill has been drawn so as to greatly reduce the duty or to put on the free list practically everything produced on the farms in the Northwest under the designation of raw material, while the products from the farms down South and manufactured articles, especially cotton goods made from cotton grown down South, are protected by a high duty. Farmers in the Northwest will be permitted to sell in competition with farmers in all the world and made to buy trust-made goods made in the United States under a high protective duty. They will be permitted to sell their products at the price fixed by the world, which is, of course, the lowest, and buy in the United States, the highest market. On the other hand, the manufacturer—as a general thing, everything he buys is put on the free list under the guise of raw material, and everything he sells is protected by a high duty under the garb of finished product. When he goes into the market to buy, the market of the world is open to him. When he sells, the doors to the outside world are closed and the highest market of the world is reserved for him. In other words, it is proposed to rob Paul to pay Peter. Unfortunately for the Northwest farmer Paul pays Peter. He is the goat and holds the bag, or, as stated recently by a distinguished Democrat, that if he was back in the Senate he could not vote for the bill on account of its discriminating provisions that under the bill manufacturers are benefited as the reduction of duty on so-called raw material will exceed the reduction made in the actual protective duty on the finished article—that is, his saving in buying raw material will be greater than his loss sustained in the reduction of price, while practically everything the farmer has to sell is on the free list and everything he buys is highly protected.

In calling attention to the changes made, it is not done in the hope that the bill can now be improved upon. I fully appreciate that any such effort would prove a fruitless task, hence my object is simply to call attention to the rank injustice done; also to have printed in the RECORD the following extracts from a letter received:

NEW YORK, *September 2, 1913.*

DEAR SIR: We call to your attention a paragraph in the proposed new tariff bill now under consideration by Congress which will vitally affect the producern and dealers in pure butter in this country, namely, section 4, paragraph D:

"That articles, goods, wares, or merchandise going into Porto Rico from the United States shall be exempted from the payment of any tax imposed by the internal-revenue laws of the United States."

Under this section, if it be enacted, it will be possible to ship to Porto Rico, free of tax, colored oleomargarine and adulterated butter, both of which are now subject to a tax of 10 cents a pound when shipped there. The probable result will be to destroy the pure butter trade of the United States with the island.

The total quantity of butter used in Porto Rico is about 3,000,000 pounds a year, practically none of which is produced there. A very large part of the trade in that island in pure butter will be lost to the dairy industry of the United States if the above quoted paragraph is enacted into law as it now stands. The only ones that will profit by this provision in its present form will be the manufacturers of colored oleomargarine and the shippers of adulterated butter, while the loss of the Porto Rico market will be felt by every dealer and shipper in pure butter in this country, irrespective of the fact that the Government will lose the international revenue tax, not only on butter but on all other products subject to internal-revenue tax which may be shipped to Porto Rico.

* * * * * * *

We feel that our interest as exporters of pure butter to Porto Rico is identical with yours in this matter, and we trust you will make an earnest effort to free this trade in Porto Rico from the competition of oleomargarine and adulterated butter which threatens it.

* * * * * * *

Yours, very truly,

Here again is the old story, "Down with the genuine and wholesome dairy product to make room for counterfeit oleomargarine." No discussion of the subject is necessary. Now that the bill has passed the stage of amendment, it is enough to say that the paragraph referred to is in line with oleo legislation, championed by the friends of this bill, and evidently, now that the organized and unceasing efforts to legislate so as to substitute fraud, deception, and counterfeiting oleo for worthy, legitimate, and genuine products of butter have failed, the tariff legislation had to be taken advantage of, and legislation by inserting jokers was resorted to.

Income Tax.

EXTENSION OF REMARKS
OF
HON. JOHN A. MAGUIRE,
OF NEBRASKA,
IN THE HOUSE OF REPRESENTATIVES,
Tuesday, September 30, 1913,

On the conference report on the bill (H. R. 3321) to reduce tariff duties and to provide revenue for the Government, and for other purposes.

Mr. MAGUIRE of Nebraska. Mr. Speaker, in a very few days a new tariff law, a Democratic tariff law, will be upon the statute books. It will mark the first great triumph of the Democratic administration in its efforts to secure for the people of this country a fair and equitable tariff law and one which has been drafted and passed by the chosen representatives of the people. The hand of special privilege has had no part in this tariff bill. The sordid influences which have prevailed in shaping and passing other tariff bills for nearly two decades found no quarter and scant welcome in the deliberations which have marked the passage of this measure. It is my judgment that the American people will accept this law as a great piece of statesmanship and as a fulfillment in good faith of the pledge of the Democratic Party for tariff reduction in the interests of the tax-burdened people. They will recognize in it no tajnt of selfish greed or corrupt influence. It will be heralded as an emancipation proclamation to our people, who have been paying unjust tribute for years because of special favors granted by their own Government. This tariff bill does not take away from any man or from any industry anything to which he is rightfully and lawfully entitled. In this bill our people are not humiliated by being forced to look upon their Government as a benefactor distributing public favors to certain classes of beneficiaries. I rejoice that the wisdom and good judgment of the American people give assurance that no artificial panic can be thrust upon the country as a result of the enactment of this legislation. Only those have cause to fear who have sought and secured in the past the special privileges at the hands of the Government, which enabled them to wring from the consumers of this country exorbitant prices for their manufactured products. These prices have been soaring higher and higher. Business or industry built upon such an unstable and uneconomic basis may find, when forced into the field of fair competition, some difficulty for a time in holding its own, but will learn to readjust its operations to meet the new conditions. My confidence in the genius of the American people and in the business men of our country persuades me that legitimate business will rejoice in its freedom and henceforth it will thrive because of its own merits and scientific management.

But, Mr. Speaker, what I have just said has special reference to the tariff features of the bill, and, as I have stated, this bill as a tariff-reform measure marks a splendid and complete triumph in a struggle which has lasted half a century. But the tariff feature of the bill is only part of the greater achievement which the bill as a whole has accomplished. Inasmuch as raising revenue is the essential justification of a Democratic tariff measure, it was deemed not only proper but wise to incorporate in it the income-tax provisions. These two reforms have been on the firing line in every campaign where there was a Democrat to lift his voice or drive his pen. Their advocates have borne the brunt of the fight against tremendous odds and now victory is about to perch upon their shields. The champions of the people have won at last. All honor to the courageous leaders who have led the fight for the people for 20 years. Some have lost and others have won, but ultimate victory is on the side of humanity because of the loyalty and devotion of the friends of justice and good government. Add together the friends of the tariff reform and the friends of the principle of the income tax and you have a combined force of progressive thought in this country which will be able not only to overwhelm the opponents of reform but will also sustain these measures when enacted and hold the ground already gained. When our people realize how complete has been their triumph they will wonder how the transition was made so quietly. They will also have reason to rejoice that the people are again in control of their own Government.

The adoption of the income tax is even a greater achievement than tariff reform, because it has helped to solve the tariff question by furnishing a more equitable and just means of raising needed revenue for the support of the Government. Protectionists can not longer argue that reduction in tariff rates will

empty the Treasury. This income-tax reform has been slow coming and has met with the most stubborn and determined opposition. Since the blow received when the Pollock case was decided the advocates of an income tax have been discouraged, but they never lost hope.

Over a year ago, when discussing the question of revenue by taxation, I expressed the hope that the time was not far distant when this Government would be able under a constitutional amendment to enact an income-tax law by which the larger portion of the necessary revenue might be collected. I rejoice at this time that my hope is about to be realized.

Before the sixteenth amendment was adopted the constitutional provision that all direct taxes must be apportioned according to population gave rise to endless discussion and several judicial decisions as to what was a direct tax, and also what could be subject to such a tax under the Constitution. In the tariff law of 1894 an income-tax provision was incorporated, and this brought up again the old controversy over direct taxation. But inasmuch as the income tax of that year was not apportioned a case was brought to the Supreme Court of the United States in which the constitutionality of the act was questioned. The prevailing opinion of the time was that a tax upon incomes was not a direct tax, and hence Congress had power to levy such a tax without apportionment. By a divided court decision it was held that the act in question which levied a tax on incomes was unconstitutional.

This situation not only disappointed the advocates of an income tax but it also created a deficit in the Treasury from which the Democratic Party in power suffered. Undismayed by the results of their efforts the people again declared their belief in the justice of an income tax, and the agitation was begun in Congress and out in the hope of securing a reversal of the Pollock case decision, or if not that, then a constitutional amendment specifically giving Congress the power to levy a tax upon incomes. Meanwhile, several of the States adopted inheritance tax laws in the hope of forcing wealth to contribute to the support of the State governments. In some of the great centers of wealth the tax commissioners found that there was a systematic evasion of taxation; that wealth was in hiding and was being converted into intangible securities which could not be reached for the purpose of taxation; that no inconsiderable amount of wealth and property was held in this country by foreign residents who spend their large incomes abroad while enjoying the protection of this Government. These conditions aroused public sentiment in favor of the Government resorting to an income tax so that the burdens might be borne by those able to pay them. Democratic platforms have declared repeatedly in favor of an income tax. The Democratic platform adopted in 1896, referring to the decision in the Pollock case, says:

We declare that it is the duty of Congress to use all the constitutional power which remains after that decision, or which may come from its reversal by the court as it may hereafter be constituted, so that the burdens of taxation may be equally and impartially laid, to the end that wealth may bear its due proportion of the expense of the Government.

And again in the platform of 1908:

We favor an income tax as part of our revenue system, and we urge the submission of a constitutional amendment specifically authorizing Congress to levy and collect a tax upon individual and corporate incomes, to the end that wealth may bear its proportionate share of the burdens of the Federal Government.

And finally in the platform of 1912:

We congratulate the country upon the triumph of two important reforms demanded in the last national platform, namely, the amendment of the Federal Constitution authorizing an income tax and the amendment providing for the popular election of Senators, and we call upon the people of all the States to rally to the support of the pending propositions and secure their ratification.

The demand was so strong that in the 1909 tariff law the Senate was compelled to yield so far as to allow an amendment for a tax on incomes of corporations. In the last Congress the Democratic House passed a bill extending the provisions of the corporation-tax law to individuals even before the constitutional amendment had been ratified by the States. The same Congress had already adopted a joint resolution to amend the Constitution giving Congress power to levy an income tax, and this was finally ratified by the required number of States, and on February 25, 1913, by proclamation, the amendment was declared to be a part of the Constitution of the United States.

Under the constitutional power now in Congress a bill has been passed and will soon become a law by which all net incomes over $3,000 will be required to pay a tax of 1 per cent, with certain exemptions. An additional tax of 1 per cent is levied upon net incomes between $20,000 and $50,000, and the rate is graduated up to the point where a total rate of 7 per cent is levied upon net incomes above $500,000.

This power to levy an income tax should serve not only for emergencies, as some would have it, but as a permanent part of our taxing system. The whole question of taxation is involved. Such a tax is justified from any reasonable standpoint. Wealth has not borne its share of the public burdens of taxation. The principle of an income tax recognizes that as wealth has more at stake for the Government to protect it should therefore in all fairness welcome heavier burdens than those who have little or nothing. An income tax is a just tax because it takes in proportion to what a man has to give. It taxes those whose accumulations make their income great and easy of return. It lessens not their necessary supply but only their excess and abundance. The measure of this tax is not what a man consumes, as is the case with tariff taxation.

By this tax the burdens of indirect taxation can be made lighter for all. Those who are not so fortunate as to have incomes large enough to be taxed will still pay their share toward the support of the Government by way of indirect taxes laid upon the articles they eat and wear.

The increasing needs of our Government make it necessary for a large amount of revenue to be collected. Until now we have had but two principal sources of revenue taxes, namely, customs and internal revenue. By adding this new source, namely, the wealth of the country, it will not be necessary to collect such a great amount through the customhouses as have been collected under the high-tariff system. Every dollar so collected as tariff comes ultimately from the consumer. But this is not the greatest evil of high tariff. For every dollar collected for revenue the people pay five to the protected interests. On the other hand, every dollar collected under the income tax finds its way directly into the United States Treasury.

The expenses of maintaining this great Government are growing heavier each year, and these expenses must be paid out of revenues raised by taxation. It is found that we must collect now about $1,000,000,000 annually to run the Government.

For 1913 the internal revenue under the new tariff law is estimated at $322,000,000, and the new income-tax law may produce, as estimated, $82,000,000, thus relieving the strain upon customs taxation which has been borne by the great multitude of consumers.

With the aid of the new income-tax law we can lay protective tariff on the shelf and eliminate the many evils which have their roots in the unjust system. Trusts and monopolies can be treated as separate problems and will, doubtless, be less difficult of solution. Deficits and bond issues need not occur as long as Congress has the power to tax incomes and establish this equitable method of raising revenue as a permanent and vital arm of the taxing power.

Very soon the people of this country will find in the working out of these two great reforms—the tariff and the income tax—that their interests have been carefully guarded in this legislation. I am confident the people of my State will accept the work we have accomplished as the greatest progress in reform for more than a generation. I am glad to have been able to assist in this achievement for better government and happier homes.

Our Merchant Marine.

EXTENSION OF REMARKS
OF
HON. J. CHARLES LINTHICUM,
OF MARYLAND,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, October 2, 1913,

On the bill (H. R. 3321) to reduce tariff duties and to provide revenue for the Government, and for other purposes.

Mr. LINTHICUM. Mr. Speaker, there is no more humiliating and pathetic chapter in the legislative history of our country than that pertaining to our merchant marine. Our forefathers, with that splendid ability and foresight which ever characterized them in their handling of our national problems, found at the close of the Revolutionary War that 75 per cent of our over-sea commerce was being carried in foreign vessels. The gravity of such a situation was at once apparent, and they immediately set about to transfer that control to where it properly belonged.

By a reduction of 10 per cent in the duty on all imports in American vessels, by fixing a tonnage tax of only 6 cents a ton on American vessels, of 30 cents on American-built foreign-owned vessels, and 50 cents a ton on foreign-built foreign-owned vessels they gave to American shipping such a stimulus that within five years American ships were carrying 90 per cent of our foreign commerce. Thus, as if by magic, we rescued from foreign competitors our carrying trade and placed that trade in the hands of American shipowners.

Not satisfied with carrying 90 per cent of our commerce, a later generation argued that so impregnable were we on the sea that nothing could wrest from our grasp that domination of the waters which we seemed to hold in the hollow of our hands, and that if we would cease to discriminate we would gain the other 10 per cent, and so we modified our laws, and in our efforts to secure the remaining 10 per cent we lost the 90 per cent that we formerly possessed. Within that period of more than half a century, during which time preferential duties to American ships were in effect, our vessels carried on an average of 80 per cent of our imports and exports.

Withdrawing our policy of preferential duties, abandoning our bonuses to those lines which were competing with the subsidized lines of Great Britain and other foreign countries, we saw our shipping steadily decline during the past 51 years until we carried only 19 per cent of our foreign commerce, and now it has fallen to a point where we carry only 10 per cent.

With this inglorious record in mind I was pleased to note that when this bill was originally passed by this House and sent to the Senate, Section J, subsection 7, provided:

A discount of 5 per cent on all duties imposed by this act shall be allowed on such goods, wares, and merchandise as shall be imported in vessels admitted to registration under the laws of the United States.

That was one section in this bill in which I am particularly interested, and it was my pleasure to register with my vote my indorsement of this, which I hoped was to be the first of a series of legislative acts destined in time to give back to us our American merchant marine—that essential adjunct of our commercial supremacy—in all its old glory, made dear to us through its many hallowed memories and noble traditions.

But I am bitterly disappointed to find that the House conferees have agreed that this provision be emasculated by the addition of the following proviso:

Provided, That nothing in this subsection shall be so construed as to abrogate or in any manner impair or affect the provisions of any treaty concluded between the United States and any foreign nation.

As amended by the Senate much that this provision was intended to accomplish has been nullified, as I understand that Russia is the only country with whom we have no commercial treaty at the present, and that country will be the only one to fall within the operations of this law. But let us hope that these treaties may be so construed or altered as to give us the full benefit of this clause as was intended by this House.

MARYLAND AND OUR MERCHANT MARINE.

Embracing within its area so much of that vast expanse of water which constitutes the beautiful Chesapeake Bay, it is natural that Maryland should take a keen interest in our merchant marine, and that she should be vitally affected by everything that relates to it.

The water is the theater of activity of many of our people, and many of those now living can remember the day when the Chesapeake was dotted with its white fleets of clipper ships whose prowess and reputation made the name Baltimore famous throughout the world. My father, Sweetser Linthicum, who spent seven years of his early life as the captain of his father's vessel, has told me on numerous occasions of the great merchant ships of our city which traversed the globe when he was thus engaged and when our merchant marine was in its glory, and he was sad when relating how our marine had gradually faded away during his life. And Richard Henry Dana, jr., in that splendid work of his, Two Years Before the Mast, refers to the good ship *Ann McKim*, of Baltimore, as being one of the fastest and best-sailed merchantmen on the Pacific coast. Thus, even while Baltimore was in her infancy, her clipper ships were carrying her goods and making her products known to the people of distant lands.

The free-ship policy we have pursued that caused us to lose our maritime prestige has not only proved a failure in this country, but likewise to France, Germany, Austria, and Italy. England, after building up her shipping under a system of rigid navigation laws, discriminating duties, and subsidies on an enormous scale, adopted the policy of free ships because it was clearly to her interest to do so. Carrying 56 per cent of the entire commerce of the world, having secured this position through discriminatory legislation in favor of her own shipbuilders and shipowners, she now, by every artifice at her command, and by holding the threat of retaliation over the heads of other nations, has been generally successful in thwarting in those nations the endeavor to regain their commerce through the adoption of a policy identical with that which caused her own shipping to flourish. So keen is the dread inspired by these threats that a prolific source of argument against the preferential duty proposed in the pending bill was that this provision might invite English retaliation. In other words, British threats have bluffed the world and kept in British ships the world's commerce.

DISAPPEARANCE OF OUR MERCHANT FLAG.

On a recent visit to this country of Dr. Lauro S. Muller, the Brazilian minister of foreign affairs, that able and scholarly diplomat reviewed to some extent the trade relations existing between the United States and Brazil. Pointing out that in 1912 our imports from Brazil amounted to $123,881,644, he stated that our exports to Brazil reached only $34,678,081. In accounting for this great discrepancy between our imports from Brazil and our exports to that country he asserts that, in his opinion, the chief factor in the situation is the fact that the American flag does not fly from a single vessel regularly engaged in the Brazilian trade, and emphasizes this need of ships by declaring:

We of Brazil and the United States need ships and again ships. There is no excuse for delay, because Brazil, with her ports on the Atlantic, is one of the few Latin-American countries that will not be brought nearer by the Panama Canal

This balance of trade against us in this one South American country, wherein we buy one-third of her total output and sell to her only one-tenth of her imports, should certainly direct our attention to our present niggardly attitude toward our foreign carrying merchant marine and the necessity for some change in our present policy.

It seems difficult to realize that but little more than 60 years ago American merchant ships, sailed by American masters and manned by American crews, were supreme upon the sea. It was the era of the clipper ship, the highest development in the art of wooden-ship building. The American ship in that day was the most perfect mechanism that sailed the waters. American shipmasters were men of energy, genius, and ability, while the crews they commanded were of a class whose equals were not to be found elsewhere upon the waters of the earth.

To-day our foreign merchant marine is perilously near extinction. Our carefully protected coastwise shipping has developed into a business of huge proportions, but under our neglect of our foreign shipping the Stars and Stripes, other than those to be seen on an occasional man-of-war, are almost a rare sight in foreign harbors throughout the world.

OUR ECONOMIC LOSS.

Ninety-five per cent or more of our imports from and exports to Europe are carried by foreign ships, of which British vessels monopolize about 60 per cent. During the Boer War Great Britain was compelled to withdraw from peaceful commerce 250 steamships, with an aggregate carrying capacity of 1,000,000 tons. The result of this withdrawal was to direct the mind of Americans to the dependency of their country on a foreign merchant marine, and especially upon that of England, for the carrying of their export trade.

A frequent argument advanced, especially by foreign steamship managers, is that the insufficiency of our merchant marine affects only the coast States, which naturally build, man, and operate those ships, and that it does not to any extent affect the other parts of the Union, and especially the agricultural sections of the land. This theory was, however, absolutely exploded during the Boer War, which I have just mentioned, because, while it has always been an argument and a theory that war between European countries or by European nations with any other country would increase the demand for our agricultural products, we find that during the Boer War, when England was compelled to withdraw only the small number of ships which I have mentioned, the export of cattle alone fell off considerably.

For instance, during the year 1898, before the Boer War began, we sold to the United Kingdom cattle valued at $31,068,909, while in the year 1899, when the Boer War had begun and the ships mentioned had been withdrawn from the merchant marine, we sold them only $27,737,770, a loss in export of cattle alone of more than 12 per cent. Not alone did it affect that industry, but it affected equally the export of breadstuffs, which are carried to all parts of the world by British steamers. Not only did the United Kingdom itself take less of the breadstuffs of our country, but by withdrawal of the ships and the decrease of the carrying capacity of the marine we fell off in our export of breadstuffs to the entire world. These exports shrank from $317,879,746 in 1898 to $269,955,771 in 1899 and to $250,786,080 in 1900, showing conclusively that it was not alone the coast States which were seriously hampered and injured, but it was likewise the large agricultural industry of the land. As the result of this petty conflict and our dependency upon a

foreign merchant marine, we lost in our export trade alone in the neighborhood of $150,000,000. Imagine what our loss would have been had this been a prolonged war between formidable combatants, in which Great Britain would have needed more ships than those she was compelled to divert in this struggle against a few small States who had no navy whatever.

So that we must conclude that having practically no merchant marine of our own greatly injures the entire country and affects not only coast States and agricultural States, but the entire land in all its industries and commerce.

ECONOMIC ASPECTS OF THE SITUATION.

A moment's reflection will bring home to anyone considering the subject how independent the United States is or would be in the building of its own shipping. Thousands of miles of sea separate us from the great shipyards of Europe. It is natural, therefore, that we should depend on ourselves for our ships and that we should build these ships adapted to our own needs. It is a historical fact that the shipbuilding nations have ever been the ship-owning nations, and that nations without shipbuilders are nations without ships and without trades of their own. To neglect to build our own ships is to neglect to own the ships in which our commerce is carried. To neglect to own the ships in which we carry our commerce is to attempt to compete with our rivals for that commerce under conditions most unfair. The successful commercial nations of the past have been those nations who have built their own ships and have carried their commerce in these ships to the nations of the earth. To endeavor to build up a great state from commerce without controlling the vessels of commerce is a proposition as impossible as that to set aside the laws of gravitation.

We have adopted the doctrine of freer trade relations with the nations of the earth through the reduction of our present tariff laws, but many do not seem to realize that notwithstanding how cheap and successfully we can produce in this country we can never hope to secure the greatest success in our foreign commercial enterprise if these natural advantages which we enjoy be fettered by a condition in which we are compelled to transport the things we produce to other nations in the ships of nations who are our rivals for the same trade.

Not only is it an economic impossibility for us to successfully secure the trade of other countries when our business is carried on in foreign ships, but at the same time we are losing annually a vast amount of money which should be paid to American capitalists, American officers, and American seamen, who are deprived of carrying our commerce.

We are told that it is costing us $300,000,000 a year to carry our foreign commerce, that this cost has doubled in the past 20 years, and that it is entirely probable that it will double again within the next 20 years. Assuming this estimate to be correct, the ships that will be engaged in this commerce will earn upward of $9,000,000,000, and it will cost a billion and a half of dollars to build them. If we adopt a policy whereby we build these ships ourselves, then the money involved in the construction will be spent in the United States for American material and American labor, and at the end of that time we shall possess a shipping worth a billion and a half of dollars and shall have retained in the United States the $9,000,000,000 which these ships have earned. Furthermore, if we assume the task of building our own merchant marine, we immediately change our position to that of the leading creditor nation of the world; whereas if we continue along our present course we shall "continue to remain what we are now—a debtor nation."

The wisdom of the policy of our forefathers in encouraging building and the maintenance of an adequate merchant marine has been demonstrated time and again. We are told that under their far-seeing policy of encouragement eligible farms became town sites, land increased in value, and trade and industry everywhere felt the quickening impulse of foreign trade. Every interest in the country was benefited by the policy adopted which gave to our country the business of shipbuilding; of getting ship timber; of building dry docks and repairing vessels; of making spars, blocks, and pumps; of fitting, rigging, and sail making; of making anchors and chains, windlasses, and capstans; of building boats and making oars; of equipping and outfitting vessels; of supplying provisions and clothing for crews, and many other incidental trades.

THE MERCHANT MARINE AND THE NAVY.

The people of no other nation take more pride in their navy than do the American people, nor have the people of any other nation of the earth more reason to take pride in their navy than have the American people. Yet no navy can be successfully maintained unless there is behind it an adequate merchant marine. The one is essential to the other.

It will be recalled that in the War of 1812 our merchant marine furnished us with the strongest arm of our fighting service. At that time at least 40,000 native Americans followed the sea for a livelihood. The merchant vessels having been laid up through the "peaceful policy" of Jefferson's embargo, there being no opportunity for these men in the national service, the only outlet for their activities was as members of privateer crews. How well they served in this capacity is a matter of historic record. In that day we had more than a hundred times as many experienced men as would have been required to equip every vessel we could possibly float, whereas to-day, in spite of all the inducements we can offer, we find it difficult to get enough to man the limited number of vessels which comprise our present fleet.

Thomas Jefferson, with his usual keen foresight, predicted what might be expected by letting our foreign trade fall into the hands of our commercial rivals:

> If particular nations grasp at undue shares of our commerce, and, more especially, if they seize on the means of the United States to convert them into ailment for their own strength and withdraw them entirely from the support of those to whom they belong, defensive and protective measures become necessary on the part of the nation whose marine resources are thus invaded or it will be disarmed of its defense, its productions will be at the mercy of the nation which has possessed itself exclusively of the means of carrying them, and its politics may be influenced by those who command its commerce.

Daniel Webster expressed a similar thought in 1824. He said that it was a fundamental axiom that the great interests of the country were united and inseparable; that agriculture, commerce, and manufactures must flourish together or languish together, and that all legislation was dangerous which proposed to benefit one of them without looking to the consequences that might befall the others.

OUR PRESENT POSITION.

What would be your opinion of the business acumen of a merchant, keenly competing with other merchants for trade, who hired the vehicles of his competitors to deliver his goods? Without hesitation you would say that if this merchant was not wholly ruined by such a policy he would at least never reap the full benefit of his success.

A national business policy and an individual business policy proceed along identical lines, and what is disastrous to the individual is equally disastrous from a national viewpoint.

Just so long as we continue to pay profits to our competitors for transporting our goods, just that long do we suffer a handicap in our competition with them.

Let us not overlook that every transportation system is an artery of commerce and that every artery of commerce becomes sooner or later a producer of commerce. The representatives of these systems become the logical agents of the goods they handle, for in developing their own business it is necessarily incumbent on them to stimulate that commerce from which they derive their profits.

It is a significant fact that the phrase "Made in Germany" first began to attract widespread attention in this country contemporaneous with the advent of the great German steamship lines. Among their many other good qualities the Germans are a philosophical people; they pursue the lines of least resistance, and it did not take them long to discover that if German goods were to find foreign markets it was essential that they have behind them the powerful support of a German merchant marine. To-day goods of German manufacture are fast crowding into all the markets of civilization, and undeniably their appearance in these markets may in no small measure be accounted for by the German flag on vessels of commerce, which is rapidly becoming a familiar sight in all the harbors of the world.

We are to-day spending upward of $375,000,000 upon the Panama Canal, and yet under present conditions seldom will our flag be seen flying from a merchant ship engaged in foreign trade, while flags of all other nations will be passing to and fro carrying the commerce of the world. Shall we continue this policy, or shall we extend our laws along the line suggested by the section referred to, so that our ships may again enter into competition for our export and import trade?

The city of Baltimore, situated as she is so close to the West, with her commerce steadily increasing, so that she is fast eclipsing in certain branches her rival cities of the coast, is vitally interested in the proper solution of this great problem. Let us hope that legislation and treaties may so encourage our shipbuilders that vessels carrying our flag will be again a familiar sight on the high seas and that our people may reap the great benefits from freer trade with all the nations of the world.

BALTIMORE'S INTEREST.

Baltimore's interest in our merchant marine is manifest. In 1909 she was the thirteenth city of the United States in the volume of her manufactured products, and her increase in production bids fair to advance her on this list. For instance, from 1899 to 1904 she made a gain of only 11⅞ per cent in the volume of her manufactured products, while from 1904 to 1909 her gain was 24⅛ per cent. According to the census of 1909, of the whole value of the products reported for the State of Maryland 59⅞ per cent was made in Baltimore, and 66⅔ per cent of the average number of wage earners of the State were employed there. The men's clothing industry of the State is practically confined to Baltimore.

The development of the city as a manufacturing center has steadily increased, for in 1899 there were 2,274 establishments engaged in manufacture, while in 1909 this number had increased to 2,502. In 1899 the number of workers employed was 66,571, while in 1909 they were 71,444. In 1899 Baltimore was turning out products to the value of $135,108,000, while in 1909 the value of this production had increased to $186,978,000.

During the past two decades Baltimore's commerce has shown a like increase. In the decade from 1894 to 1903 she imported goods to the value of $155,718,902 and exported to the value of $902,460,964, constituting together a total foreign trade handled of $1,058,179,866.

In the decade from 1904 to 1913 her imports increased to $284,294,070 and her exports to $927,512,049, bringing the total of her foreign commerce up to $1,211,806,119.

In the export of grain Baltimore leads all ports on the Atlantic coast except New York. In a recent letter in the Philadelphia North American it was stated that of the 35 tramp steamers chartered between June 30 and August 9, 1913, for full grain cargoes to Europe not one was designated for loading at Philadelphia, that New York was to load 2, Montreal 3, New Orleans 1, Galveston 4, other Gulf ports 10, and Baltimore 15.

In the light of these facts and figures it is plain that the development of our merchant marine must prove of decided benefit to Baltimore, and that the State, too, with its extensive area of water and unsurpassed harbors, is vitally interested.

Mr. Speaker, I look forward to the day when, under proper legislation and with abundant port facilities, the harbor of Baltimore shall be crowded with foreign-going merchant ships flying the American flag, as it was in the days of yore. To these days all Marylanders look eagerly in anticipation, for they have not forgotten that in the past American-built ships were the ideal type that sailed the sea, and that in the keen rivalry of those days vessels hailing from Maryland ports were familiar sights in nearly every harbor of the world. Our people believe that this Government will not always persist in its present policy of ignoring this great national asset we have so lightly cast away, and that when the day returns when American shipbuilders shall receive that encouragement and just treatment to which they are fairly entitled American-built ships, laden with American goods and sailed by American crews, will invade every ocean and Baltimore will become again, as it was in the past, a name familiar in every port of the globe.

Industrial Education.

EXTENSION OF REMARKS
OF
HON. BENJAMIN IRVING TAYLOR,
OF NEW YORK,
IN THE HOUSE OF REPRESENTATIVES,

Thursday, October 2, 1913,

On the joint resolution (S. J. Res. 5) providing for the appointment of a commission to consider the need and report a plan for national aid for vocational education.

Mr. TAYLOR of New York. Mr. Speaker, I had some remarks I would like to have made in regard to vocational education. I would like to have permission to extend them in the RECORD if possible.

Mr. Speaker, in attempting to formulate a plan for a system of vocational education in our schools we need not destroy the present efficient public-school system, that has cost our people so much money and thought. Any plan that we may formulate should contain the outlines of a workable system capable of being added to our public-school systems in the different States. I mean that we should outline a course of study and provide that the Federal Government advance from year to year, according to the school population, a stated amount of money to aid those States willing to adopt the system. A method of this character would meet the objections of those professing State rights ideas. It would thereby leave each State to conduct its system of education as it may see fit, the only requirement being that it should adopt the course of study provided or outlined either in the bill or from time to time by the Department of Education, under whose jurisdiction it should be placed. The creation of a system somewhat along the lines of the regent system in the State of New York might not be objectionable.

The commission in whose care the drafting of the bill is left will be required to exercise the greatest of care not to frame a measure interfering with our public-school system or the State's rights notions of many of the Members of Congress. The subject matter of Senate joint resolution No. 5 is of the utmost importance to this country. It is more important than tariff or currency legislation, for, if properly worked out, it will educate a vast army of young men and women now neglected and create in them a moral and intellectual force working in harmony for the uplift of every section of this country. Such a force, if properly directed, can do more good than a thousand Panama Canals and at a much less cost.

Vocational education is by no means new in this country. Education along these lines has been introduced in the schools in many of our large cities—for instance, the city of Cleveland, where it is accomplishing wonderful results. In different sections of our country we find feeble attempts to introduce it through the medium of free night schools, where a general and business course is followed in conjunction with our public-school system. The idea of a movement in this direction, emanating from this body, is to make this kind of education popular through the instrumentalities of the Federal Government.

Our public-school system is the most expensive in the world, as a general rule the school buildings are monuments of architectural beauty and grandeur, requiring a great deal of care and money to maintain, and, together with the salary list and equipment, call for vast appropriations of the people's money. All of our citizens help our schools, take an interest in them, and, consequently, are so jealous of them that they will not tolerate interference.

Millions of dollars are levied each year in taxes, either by direct or indirect means, to perfect and maintain our schools, and every dollar of these taxes are cheerfully paid. It is not the desire of any Member of this House to criticize our educational systems or anyone in charge of them; it is merely our desire to point out certain lines along which they can be improved and extended to cover the several fields of education not provided for generally in an educational way to meet the demand of the times.

When a boy I often heard the old folks of that time laugh at the idea of giving their daughters anything more than a common-school education. To educate the girls was considered a waste of time and money. The boy who was to fight the battles of the world should be educated. They entertained the same fixed ideas in relation to the education of the boy who was to till the soil or become a mechanic—he was not supposed to need an education. To-day we have schools and colleges where our daughters and sisters can and do receive the best education possible on equivalent lines with the boys. The struggle for supremacy has become so keen we all recognize the fact that education is absolutely necessary for the advancement and welfare of the girl and the boy no matter what field each is to engage in through life.

In years gone by great strength was looked upon as an accomplishment, and only those endowed with it were considered worth while. Now we expect strength and intelligence to work in accord. It is the young man with a keen, intelligent mind, bright eyes, quick, and elastic muscles who succeeds to-day, and is fast making our country the greatest in the world.

Education in this country has become a great moral force, through years of patient labor a grand and imposing system has been created. It has been built along lines tending to make our children great thinkers, and reflects the ideas of scientific educationalists, containing many of the fads and fancies of our past and present educational authorities.

The country has been advancing, the ideas and thoughts of our people have been changing, but our system of education in the general sense has not kept apace with these changes. New fields of education have opened before our eyes while we slumbered peacefully. The present system is admirably adapted to educating our young men and women to become doctors, lawyers, teachers, and business men, but it does not meet the requirements of the boy or girl who will be obliged to make his or her livelihood on the farm, in the factories, or at the trades.

We are acquainted with the boy who is always backward in his studies, running away from school, causing endless trouble,

and as a result is taken from school at an early age, thereby missing the advantages of an education. This boy is active and industrious about the farm, helps father in the store, and evidences some brains and ability. The question we are asking is, "What is the trouble with this boy? Why did he leave school?" The answer is simple—he never was interested in the studies given him. There are many things in life adaptable in which this kind of a boy can be interested. It is the duty of our teachers to find that out, instruct him in these subjects, and when once you get his attention you hold it for all time. We used to call that "bent." That is what I mean by vocational training.

The farmer's boy is interested in the farm workings. If he were required to bring a collection of the seeds from the farm and test them, do you not suppose he would be interested in the work? If he were asked to bring a sample of the milk from the favorite cow for testing, do you not think his eyes would be opened and his interest aroused? We could continue these illustrations to the end of the list with the same result; get the boy interested, then teach him. When you start him along lines interesting to him, do not stop; give him all the latitude and be able to meet and answer his every question in the premises.

One of the defects of our present school system is that we teach the children reading, writing, and arithmetic until they reach the age of 12 or 13 in the graded schools, when, even if they continue to the higher schools, generally that is the last they hear of either of these rudiments. I may here make the astonishing assertion that less than 40 per cent of our high-school graduates can spell correctly or do a common example in fractions.

As a general rule, the parents of our public school children are poor or in the humbler stations of life. We have all witnessed the struggles of some parents to keep their children at school until they graduate. This is usually at the age of 16. This means that the boy or girl who expects to take up a trade must work as an apprentice three or four years after graduating before becoming self-sustaining. This prolongs the burden of the parents in supporting them. Suppose, when this child becomes 13 years of age, it could continue with its studies, and at the same time be instructed in the trade or business it expects to follow, qualifying it to earn a livelihood upon leaving school on the completion of the course. Therefore, in place of having 90 per cent of our children leaving school at the age of 16, unqualified for their world's work, they would come out finished, thereby lightening the burden of their respected parents by being able to sustain themselves and aid the parents as well.

What is the great German Nation doing along these lines of vocational work? Here is a sample of it.

In the agricultural districts the course of study outlined for a young man who is to become a farmer is as follows:

1. Cultivation of the ground, general field and plant culture, theory of fertilization for special plants.
2. Teaching of the breeding, feeding, and handling of domestic animals.
3. Zoology and veterinary science.
4. General business instruction.
5. Agricultural chemistry.
6. Physics.
7. Plant culture.
8. Introduction to the forms of business correspondence.
9. Theory of the principles of farm management.
10. Agricultural bookkeeping.
11. German language.
12. Arithmetic.
13. Geometry, surveying, and drawing.
14. Fire brigades.

The school term being over, "the farm demonstrator," who is known there as "Der Wanderlehrer," follows the circuit, the homes of his students of his winter class, going from farm to farm, and is with his pupils in their own fields from sunrise to sunset, putting the learned theories to practice.

The girls in the household are not forgotten. They are taught "the efficiency of the kitchen," "how to save a pfennig here and there," "salting, curing, smoking, and cooking meats of every sort, handling of milk and the making of cheese and butter, preserving fruits and vegetables, caring for the poultry, pigs, and calves," all keyed to the demands and conditions of country living, carefully set out by "Die Wanderlehrerin," so that the apt pupils become a bulwark against the high cost of living.

This is an illustration of how different courses of study could be formulated, every one of which are useful.

My interest was also attracted to the story of what one man, Mr. Lyman Ward, was doing in Alabama to aid the white young men and women in securing an education along real lines to sustain themselves, which I consider well worth repeating, as it shows what is needed to-day.

This story was printed in the Sunday Magazine of the Washington Star of August 24, 1913:

LYMAN WARD, A SOUTHERN SCHOOLMASTER.

Down in the red clay country, where summer birds and barefooted boys may be seen in midwinter, but where the open fireplace—burning wood—is not only a delightful luxury but a stern necessity, I found a school. This school is not merely a place where boys and girls spend four years studying books. It fits its pupils for life, taking them at all ages and at all degrees of uneducation.

Back of the school is a man, and the fact that man and school are there is largely the result of two spoken sentences. "The difference between Seth Low and myself is this: Seth Low believes in helping men. I believe in helping men to help themselves." So spoke Henry George in that memorable campaign just before his death. In the throng that heard him was a young Universalist preacher, and the sentence struck home. "I am doing the wrong thing; I am trying to help men instead of helping them to help themselves," he admitted to himself.

It so happened that this young minister was about to go upon a southern trip in behalf of his church, "The Save-All Church," as the negroes of the South called it. And thus a sentence of Henry George's became wedded to a sentence of Booker T. Washington's, "To uplift the negro you must uplift the white man with him"; for as Lyman Ward traveled he learned of the thousands of white boys in the South without education or means of education. Booker Washington was struggling to train the ignorant colored youth, but where was a similar opportunity for the backward white boy of the South? Here, then, was work worthy of a man who wanted to help men to help themselves; and, seeking the line of greatest resistance, he settled in Alabama.

Alabama is a proud State, and among the boasts that she can make is that she is first in illiteracy! Sidney Bowle, of Birmingham, estimates that there are 100,000 white boys and girls in the State who can neither read nor write. In 1911, out of 800,000 boys and girls of school age, both races, nearly 500,000 were not in school a single day. Add to these facts that 80 per cent of Alabamans live in the country and you can see why Lyman Ward established his industrial school in the very heart of Alabama, near a little town called Camp Hill.

He had no money and but few friends, but he had a realization of the need and a spirit that does not know how to spell the word "discouragement." He soon learned, of course, that the people of Alabama were like the people anywhere else—that the young men and women wanted an education, and that many a poor parent would give his last dollar to give his children a "chance."

One of his first supporters was a poor woman, who drove 15 miles to bring the school 25 cents. One man of 40 entered the school as a pupil in 1907, and to-day is teaching a school of his own. On the day I was in Camp Hill I met a man who had driven 20 miles in a prairie schooner—and driving is not boulevarding in rural Alabama—to place two pupils in the school. He had brought all the money he had in the world—$35—to pay for their board and tuition, and he cheerfully gave it all except 75 cents, which he retained for food for himself and horses on the return trip.

The school educates both sexes—the ages range from 16 to 30—and there are girl boarders who have no money whatever and whose bread and clothing must be found while they are acquiring an education. Ward took them in, and Ward will find a way to put them through; but—but—is it not a marvelous thing that some of our multimillionaires find it hard to give away some small part of their money worthily?

The school started in a rickety three-room building, heated by only one stove. There are no luxuries even yet, but there are several buildings, built by teachers and pupils of the school. This is real industrial education, and the boys and girls are there for earnest business. At Camp Hill, as a trustee put it, everybody works, including father. Nor does father hesitate at any particular kind of work. A visitor found him acting as waiter at the common breakfast table, and expressed some surprise.

"I ask my boys to do nothing that I won't do myself," responded Lyman Ward tersely. The remark is characteristic of the man and his democracy. Cultured of mind, broad of thought, keenly alive to all the world's activities, good humored, witty, active, informed, he is a man whose religion is democracy and whose democracy is religion. Such is the founder and president of the school.

The school itself is based on the idea that the white youth of the South deserves as much chance as the black youth. Small as the school is compared with the work there is to do, there is hope that it may be an example and an inspiration to the founding of similar schools where needed. This school does not take the boy from the farm; it puts him back upon the farm educated in head and hand. The school itself is a farm, an old slave plantation of 400 acres, and the boys farm it to help pay for their schooling.

Most of the raw material that comes to the school is, indeed, pretty raw—not stupid, not at all; just unsophisticated. On the day the school opened Mr. Ward announced that those who knew something of arithmetic would report to a teacher in the adjoining room. While several knew something of arithmetic, not a pupil moved. Not one knew what he meant by the word "report." Some of the pupils, when they arrive, do not know that they live in the twentieth century; they never have had occasion to differentiate one century from another. Some of them, when asked, have not known that this is the Christian Era. Many have never heard of any such man as Mark Twain. One boy entered the printery and exclaimed at seeing a sponge. It was an unidentified animal to him.

Examples of their lack of commonplace knowledge might be multiplied, but these suffice to show the character of the material out of which are shaped live men and women with their faces to the future. Surely many a man celebrated in the mouths of men might envy the fine work that is being done by this modest schoolmaster, Lyman Ward, instigator of efficiency. (Edmund Vance Cooke.)

If our schools would only adopt textbooks and courses of study along real lines, we would have no more tough or dull scholars.

God created us equal, but the opportunities of some are greater than those of others. This kind of legislation will tend to make the opportunities of all equal. It is my earnest hope that a commission will be appointed and that it will act with expedition.

The New Tariff—What Is the Return from Canada?

EXTENSION OF REMARKS
OF
HON. ALBERT JOHNSON,
OF WASHINGTON.

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, September 30, 1913.

On the conference report to the bill (H. R. 3321) to reduce tariff duties and to provide revenue for the Government, and for other purposes.

Mr. JOHNSON of Washington. Mr. Speaker, a few days ago the president of the Canadian Manufacturers' Association gave utterance to the following statement:

An examination of the Underwood bill as finally amended confirms me in the belief that Canada made no mistake in rejecting the reciprocity agreement of 1911. In saying this I do not question the value of the market concessions we would have secured thereunder; but whereas then we would have secured these concessions only in return for similar concessions on our part, now we are to secure many and some of the most substantial of them without an embarrassing consideration of any kind.

There you have the situation in a nutshell. The Canadians concede the value of the concessions they would have received under a reciprocity pact, but congratulate themselves that they did not vote for reciprocity, for now under the Underwood tariff bill they receive the concessions full and free, and give nothing to the United States in return. We are neither given a market nor paid anything in duties on the principal things that Canada grows or makes.

Mr. Speaker, Canada refused reciprocity and receives a gift of the great American market, to quote the very words of the astute president of the Canadian Manufacturers' Association—

Without an embarrassing consideration of any kind.

And what is more, Canada, while accepting and gloating over her opportunity to send across the line duty free the hundred and one products for which she seeks a market, places an export tax on the raw materials which we might use. I am not familiar with the whole list, but I can present a few facts with regard to British Columbia's export duty on logs, bolts, spars, and so forth.

EXPORT OF LOGS BARRED.

Do you realize that British Columbia forbids the exportation of logs or raw material to the United States on all lands except a few classes of Crown-grant lands?

The people of western Washington feel that there should be at least a small benefit in return for the opening up of a market of 90,000,000 people to Canadian products. Free logs from British Columbia may enable some of our shingle mills to obtain cheaper logs and bolts and thus continue manufacturing on this side of the line.

CROWN-LAND LOGS FOR EXPORT TAXED.

Not only does British Columbia prohibit the exportation of logs from licensed lands, but places an export tax on Crown-grant logs when exported. From this tax the following official rebates are allowed:

Schedule No. 1.

SPARS, SAW LOGS, AND SAW BOLTS.

The following rebate on tax shall be allowed when the timber upon which it is due or payable is manufactured or used in the Province of British Columbia. All tax over and above 1 cent per hundred feet board measure.

Feet.	Inches.	No. 1.	No. 2.	No. 3.
40	24	2.00	1.50	1.00
50	24	2.25	1.75	1.25
60	24	2.50	2.00	1.50
70	24	2.75	2.25	1.75
80	24	3.00	2.50	2.00
Over 80	24	4.00	3.00	2.50
25	31	.20	.15	.10
32	36	.40	.30	.20
37	41	.60	.45	.30
42	45	.80	.60	.40
46	48	1.00	.75	.50
Over 48		1.50	1.00	.75

Schedule No. 2.

PILES, POLES, AND CRIB TIMBERS.

The following rebate on tax shall be allowed when the timber upon which it is due or payable is manufactured or used in the Province of British Columbia. All tax over and above one two-hundredths of one cent per linear foot.

Feet.	Inches.	Cents.	Length.	Per thousand feet board measure.
			Feet.	
40	11	$0.01	40	$2.00
50	11	.01½	50	2.25
60	11	.01½	60	2.50
70	11	.01½	70	2.75
80	11	.01½	80	3.00
Over	11	.02	80	4.00

Provided always, that the lieutenant governor in council may allow such rebate on piles, telegraph poles, and crib timber not manufactured or used in the Province as may be deemed advisable.

Schedule No. 3.

	Cents.
Mining props and lagging, per cord	50
Railway ties, per cord	50
Cordwood, per cord	25

Schedule No. 4.

Shingles or other bolts, of cedar, fir, or spruce, $1 per cord. The rebate to be allowed when manufactured or used in the Province of British Columbia shall be all over and above 1 cent per cord.

A COURT DECISION.

With regard to the prohibiting of certain timber exports from British Columbia the following dispatch, from the Seattle Post-Intelligencer, is of interest:

RULES IN SHINGLE CASE—BRITISH COLUMBIA COURT DECLARES EXPORTATION OF BOLTS ILLEGAL.

VANCOUVER, BRITISH COLUMBIA, *September 7.*

By deciding that it was illegal to export sawn shingle bolts from British Columbia Mr. Justice Clement in supreme court chambers upheld the action of Government officials in confiscating carloads of such bolts found on the Great Northern Railway tracks at Crescent, consigned by the Excelsior Lumber Co. to a firm in Blaine, Wash.

On reading this dispatch Hon. F. D. Becker, manager of the Pacific Coast Shippers' Association, went immediately to Victoria, British Columbia, to ascertain the truth of the statements made in the dispatch, and secured the following report:

ACT IS SUSTAINED.

In order to test the definition of the timber manufacturers' clauses of the forest act, the Excelsior Lumber Co. entered an action against the Province in regard to some shingle bolts, which the company contended were manufactured lumber, while the forest department held that they were unmanufactured and therefore could not be exported from the Province. Mr. Justice Clement heard the case, and he has decided in line with the contention of the Government. He says the lumber in its present form is not a finished product in the sense that it can be put to any permanent use without further process.

Now, as a matter of fairness, if shingles are to go on the free list the manufacturers in the United States should have the benefit of free raw material from Canada. The British Columbia Parliament prohibits the exportation of logs into the United States, and if parliament does not remove this embargo the United States should provide a retaliatory duty. Otherwise, it is easy to predict where the shingles will be manufactured, and it is also easily seen that west Washington shingle manufacturers will be tempted to move their plants across the line, which is exactly why the British Columbia laws read as they do.

Mr. Speaker, the point is that in return for a market in the United States the British Columbia government should allow the free export of raw material from all classes of land. If they do not reciprocate, they should pay a duty. This is fair.

SECTION E DOES NOT APPLY.

In commenting in the Senate on this situation, Senator SIMMONS is quoted in the CONGRESSIONAL RECORD, page 4335, second column, as follows:

I call the Senator's attention to the fact, although it does not reach the case fully, that there is already such a provision in the bill. I think it is paragraph J of the section in the administrative part of the bill. It provides that whenever any foreign country imposes an export duty or a bounty upon any product shipped to this country the export duty and the bounty shall be added to the duty imposed upon that country by our tariff law.

Senator SIMMONS refers, no doubt, to paragraph E of section 5 of the administrative part of the bill, which, unfortunately, can not be made to fit the case, for the very simple reason that the Underwood bill puts lumber and shingles slap bang on the free list, which bars all chance for retaliation.

FOR THE AMERICAN MARKET.

Mr. Speaker, I desire to extend these remarks by printing an affidavit from F. D. Becker, secretary and manager of the Pacific Coast Shippers' Association. It follows:

STATE OF WASHINGTON, *County of King, ss:*

F. D. Becker, being first duly sworn, on oath deposes and says that he is a resident of Seattle, Wash., and is secretary and general manager of the Pacific Coast Shippers' Association, the members of which are wholesale dealers and manufacturers of Pacific coast forest products;

that the week ending September 13, 1913, this affiant spent in British Columbia, in the city of Vancouver and vicinity; that during such time affiant visited a number of shingle mills operating there; that approximately one-half of the shingle output then being cut by these mills was being manufactured for the American market and was of the grade known as the extra-clear shingles, which are 5 to 2 (being cut of a thickness so that when packed there are five courses or thicknesses of shingles to each 2 inches).

Shingles which are manufactured for British Columbia and Canadian markets are cut 6 to 2 (six courses of shingles to 2 inches in thickness). It was stated to me by several of these British Columbia shingle manufacturers that these 5 to 2 shingles were being manufactured for the American market, and that the Vancouver shingle manufacturers were at that time soliciting business from the American retail lumber dealers; the prices being quoted by these British Columbia shingle manufacturers were considerably less than those being quoted by the American manufacturers for like grade and quality. The quotations now being made by these British Columbia manufacturers in the American market are conditioned on the removal of all tariff restrictions on British Columbia shingles.

F. D. BECKER.

Subscribed and sworn to before me this 27th day of September, 1913.
[SEAL.] JOSEPH B. ALEXANDER,
Notary Public in and for the State of Washington, Residing at Seattle.

MILLS SHUTTING DOWN.

Mr. Speaker, the wholesale prices on shingles have been steadily dropping for some time, but prices have not dropped in retail yards. A few days ago "clears" were quoted at $1.75 and "stars" at $1.45, the lowest prices in two years. This is the result of contracts made by British Columbia manufacturers based on the passage of the Underwood tariff bill, to which the House of Representatives is to-day putting the finishing touches. Last week in one county of western Washington 24 mills shut down. An inquiry by Secretary Redfield, of the Department of Commerce, is welcomed.

A Big Navy Insures Peace.

EXTENSION OF REMARKS
OF
HON. FRED A. BRITTEN,
OF ILLINOIS,
IN THE HOUSE OF REPRESENTATIVES,

Saturday, September 13, 1913,

On the bill (H. R. 7837) to provide for the establishment of Federal reserve banks, for furnishing an elastic currency, affording means of rediscounting commercial paper, and to establish a more effective supervision of banking in the United States, and for other purposes.

Mr. BRITTEN. Mr. Speaker, a few weeks ago I introduced in the House a resolution directing the Committee on Naval Affairs to report to the House at the earliest practicable date a bill providing for an emergency appropriation sufficiently large to make it possible to begin the immediate construction of three additional battleships of the dreadnought type.

This resolution was inspired by a careful study which I have made during the past six months of the general naval equipment of the United States as compared with that of other first-class nations.

My observations have profoundly impressed me with the belief that one of the most important matters to be considered by Congress from year to year is to see that the Navy is constantly built up and kept to the highest point of efficiency, both in materiel and personnel. For if war should come, this Nation must win, and the prime factor in securing victory must of necessity be the Navy. If the Navy fails us, then we are doomed to defeat, no matter what our resources may be or how high a type may be our patriotic citizenship.

Peace with every nation is the heartfelt wish of every patriotic citizen of the United States, but peace under existing conditions can be maintained only by being prepared for war. The war cloud is not so remote but that the observing eye can detect its outer fringe, and however earnestly we may look forward to a state of tranquillity among nations we are compelled to look at conditions as they exist.

History demonstrates that mankind of yesterday is the mankind of to-day. The millennium is still in the indefinite future. Until ironclad treaties are devised that will make arbitration binding without military demonstrations, the question of disarmament is of necessity chimerical. We might as well accept this as a cold, indisputable fact. Let no false sense of security lull us to slumber. No policy of disarmament can perpetuate the peace we now enjoy. The millennial peace is yet below the horizon of our vision.

Glance back over the past year and its kaleidoscopic history tells one continuous story of war and the mighty roar of rattling guns and drawn sabers. It shows the Italian-Turkish War; the war in the Balkans; Russian massacres in Persia; an increasing unrest in India; revolutions and massacres in China; progress in the invasion and enslavement of Korea; the beginning of an imbroglio between Russia and China; general turmoil in Central America, particularly in Nicaragua; revolutions in San Domingo; continual revolutions in Mexico; and rumors of war in South America. The year has seen a renewal of the triple alliance and the development of the triple entente, neither of which is precisely a peace measure. There is grave danger of war between Austria and Servia that may involve all Europe. Sweden is gathering her forces in anticipation of a possible attack by Russia. The powers east and west are straining every nerve to increase their navies and to build up armaments afloat and ashore. The only thing that has prevented a general European war is the armed strength of the great powers. The treaties and agreements signed at The Hague do not seem to have the slightest effect on recent events in Europe. The dove of peace has been compelled to fly so high as to be entirely out of sight.

The United States has long since passed from a continental to a world power; and as a world power, who can tell at what moment it may become necessary for this country to be placed on a war footing?

This, with our acquisition of territorial possessions, with the racial question and antipathies which we are now facing, together with our insistence upon the carrying out of the Monroe doctrine, makes positive the fact that a state of preparation is the only one which will command respect, and so long as we command that respect our peace will not be threatened.

It is the man behind the punch that goes by unmolested.

Preparedness for war is the best promoter of peace, and a navy of sufficient size that is known abroad to be prepared for war is the strongest guaranty of peace; but a navy which Congress pretends to be ready for war, but which foreign powers know to be unprepared, is a manifest danger.

Power is the climax to all argument.

And, Mr. Speaker, just at this point I feel constrained to say that in my study of the naval situation I have frequently asked myself whether or not the one-battleship program of the last Congress has not had a great deal to do with the continued unsettled condition of the anti-alien land laws and the flouting in our faces by the Mexican Government of the expressed wishes of the Chief Magistrate of this country.

And at this time, Mr. Speaker, I desire to enter my protest against the unwise, unpatriotic, and un-American policy of the Sixty-second Congress, which voted to squander millions upon the pork barrel and the reelection of its own Members, but refused to spend the necessary money for the country's peace and its defense.

The United States is not immune to war; it is not invincible in war; it is not prepared for war; and the attitude of the last Congress is incomprehensible to me. The Representatives of the Nation are preparing to sacrifice a thousand million dollars to save an expenditure of fifty or sixty million dollars in the next year or two. There is no getting away from this fact or getting around it. If Congress in the last 10 years had adopted the naval programs which have been presented to them by naval experts, paid by the Government to tell the Government what is needed for the national defense, we would then have had a navy large enough to make war—which is not unlikely to come at any time—not only improbable, but impossible; and Congress can only vindicate its stupendous folly of the last decade by now voting for a naval program which will make impossible the shameful conditions and the frowning menace of to-day.

It is time for the country to wake up to the necessity of divorcing the naval appropriation from political logrolling and removing the Navy budget as far from politics as have been the canal appropriations.

Three battleships of the dreadnought type should be built this year, three next year, and at least two each year thereafter, making a program of two dreadnoughts each year, with an accompanying relative number of torpedo-boat destroyers and submarines.

For the last decade this country has been relying on a policy of international peace, looking to disarmament, that has gradually been putting us at an ever greater disadvantage, seeing that other nations are evincing no inclination to dispense with or curtail their preparation for war.

For instance, the United States has now in process of building warship tonnage to the amount of 125,238 tons.

Against this Great Britain has in process of building warship tonnage amounting to 499,940 tons, Germany 280,275 tons, France 175,960 tons, Japan 142,166 tons, Russia 172,277 tons, and little Italy overshadows us with 191,473 tons.

This comparison is as disheartening to me as it must be to Secretary Bryan with his battleship program of doves and good will.

Mr. Speaker, I believe that America's most pressing need at the present time is a Navy large enough to protect her coasts. At present we have a Navy barely strong enough to look after the Atlantic coast, which leaves the Pacific coast practically without any protection at all.

With the opening of the Panama Canal there will come an expansion of commerce on the Pacific. Our coast cities will grow with marvelous rapidity, and they must be fully protected from any hostile force.

The States and Territory which we possess upon the Pacific coast will be transformed by the influx of people from all parts of the world, and their development will attract investments, be a factor in national prosperity, and be entitled to the security that can only come to the coast through a strong and efficient Navy.

We have in the Mexican situation but a slight embarrassment compared with many that could arise, carrying with them naval needs far beyond our present capacity to successfully provide for.

It has been an open secret for years that Japan's ambition is the supremacy of the Pacific, which alone should be a sufficient reason for not curtailing our naval program, and the present difficulty between the United States and Japan, which many thinking men are inclined to believe is not the kind to be settled by the peace-loving diplomacy of President Wilson and Secretary Bryan, should make us intensely alive to the fact of our naval unpreparedness, when we are without a modern ship or an army or a completed fortification in the Pacific region, as against Japan's readiness for operation, offensive and defensive, against all comers.

A Democratic House of Representatives last year authorized the construction of but one battleship, and insisted on its program being passed by the Senate, and yet in the face of this we find incorporated in the Democratic national platform of last year this felicitously phrased, most patriotic sentiment:

> The party that proclaimed and has always enforced the Monroe doctrine and was sponsor for the new Navy will continue faithfully to observe the constitutional requirements to provide and maintain an adequate and well-proportioned navy sufficient to defend American policies, protect our citizens, and uphold the honor and dignity of the Nation.

Can any sane man reconcile the contradictions?

And in this connection I want to say that one has but to look back over the past few weeks covering the present Mexican imbroglio to see how little this part of the national platform meant to President Wilson and the Democratic Party.

The Democrats since coming into power have prevented the authorization of more than one new battleship, and Secretary Bryan's peace propaganda has had an added deterrent effect in Democratic defense legislation.

But it is noticeable that since the Japanese controversy became acute, the Mexican affair more critical, and the Senate indisposed to ratify the arbitration treaties Mr. Bryan has talked less about "friendship" and "fellowship" as substitutes for real battleships.

Mr. Speaker, it is but the part of wisdom to recognize that international difficulties may arise from so many sources that it is the height of folly not to be prepared at any hour to fully protect and maintain the interests of the Republic and our people.

Competition in commerce, desires for extension of trade or of political dominion, differences as to international boundaries or international rights, racial differences and difficulties, neglect or violation of treaty provisions, the exercise of powers of international police, alliances of unfriendly nations, the application of the Monroe doctrine, the guarding of the canal—these all must be considered as possible factors of clashes of opinions, possibly resulting in appeals to arms.

Trouble may be brewing for this country at any time, and it is now time to prepare for it. Congress is forewarned that it should enable the naval forces to cope with any dangers that may threaten. The people expect Congress to provide the means for placing this Nation in the position of the just man armed.

I was intensely gratified, Mr. Speaker, to learn that the Navy General Board has again recommended the building of four battleships, for it is the only authority in the Government which is thoroughly posted as to the conditions of the Navy. When the Navy General Board speaks, it speaks upon exact information, inspired by broad patriotism and absolute disinterestedness. The last Congress turned a deaf ear to the recommendations of the General Board and the Secretary of the Navy. Politics was mixed up in its consideration of naval affairs, and the pork barrel took precedence over the upbuilding of the Navy. But the men who have been responsible by their blindness and selfishness for our debilitated Navy and our unpreparedness in national defense must inevitably be held responsible for the record—responsible for war and its expense and its humiliation. It will be useless and weak for them to plead that they did not know and could not foresee. It was their business as statesmen then, as it is our business now, to know the probabilities of the future.

Their intelligence and our intelligence has been appealed to by information and argument from experts and veterans so as to leave no excuse save obstinacy not to understand and not to foresee.

The country favors a Navy of the very first rank, and the masses of the people are enthusiastic for its increase, a large and decided increase in the number of vessels over that of the present establishment.

Battleships are cheaper than battles, and the patriotic people of this country—and in time of peace real patriotism is even more necessary than in time of war—are demanding battleship insurance against war.

The United States is not a military Nation; her Army is small in proportion to our territory and population; and, being so situated geographically that any fear of invasion need be anticipated only from the sea, our main strength must necessarily be concentrated in the Navy. With the Panama Canal and a coast line of nearly 20,000 miles to defend, and with colonial possessions separated from us by a great ocean, it is but natural that the Navy should be our principal protection. As a Nation of ideas, present prestige, and high civilization, we owe it to ourselves, as well as to the world at large, to uphold that dignity which by reason of supremacy, wealth, and influence for good is ours. The maintaining of this standard is the mission of the Navy. Reduce the Navy and we become a retrogressive Nation.

I sincerely trust, Mr. Speaker, that my resolution may be favorably reported by the Committee on Naval Affairs and a three-battleship program adopted by the Sixty-third Congress for the next two years at least.

TORPEDO TUBES, BUT NO TORPEDOES.

Mr. Speaker, I ask unanimous consent to offer a few remarks along the lines of what I consider the most serious weakness of our Navy, the necessity of more torpedoes.

During my recent visit to the torpedo station at Newport I was fortunate in obtaining data which I feel should be in the possession of every Member of the House, and when I have finished my remarks I am sure that not even the most economical Member of the House will fail to comprehend the great necessity of supplying more torpedoes to the Navy just as quickly as possible, and that he will also support my bill for an appropriation to double the capacity of the naval torpedo station at Newport, R. I.

The total number of torpedoes of all types in the service in July of this year numbered 967, of which 268 were being converted and overhauled, while many others were fit only for target practice and experimental uses, leaving less than 700 torpedoes which might reasonably be termed as modern and first class.

Just think of it, Mr. Speaker, if war were declared to-morrow our great flotilla of battleships, destroyers, cruisers, torpedo boats, and submarines could fire but 700 torpedoes when the entire supply of the United States would be exhausted, and we could not get an additional torpedo in this country or in Europe for love or money.

It does not seem possible that previous administrations, while appropriating for battleships, each with an equipment of from two to four torpedo tubes, and while considering the construction of destroyers, each of which are equipped with from four to six tubes, and the construction of submarines, which are usually equipped with four tubes, that it was possible to overlook the necessity of appropriating for a sufficient number of torpedoes to at least keep our Navy and these ships above the ridicule of foreign nations.

The 700 torpedoes in service are not even adequate to fire two shots from each of the 463 tubes with which the various vessels of our Navy are equipped.

The torpedo situation is as ridiculous as would be the sending of a soldier to the front in time of war armed with a first-class rifle and one cartridge.

Our fleet of 40 destroyers is traveling the high seas to-day with from one to three torpedoes on each ship, while our torpedo boats and submarines, which must depend entirely upon their torpedoes for success in battle, are carrying as few as from none to four torpedoes on board each ship. Of course this might not be a serious menace if it were possible to obtain torpedoes as we obtain powder and other munitions of war, but when you consider that the total American output of torpedoes

is less than 1 torpedo per day, or 300 each year, and when you further consider that the total output of Whitehead torpedoes in Europe has been contracted for three years in advance by foreign Governments, you will then understand the seriousness of the present torpedo situation.

The firing of 700 torpedoes could be accomplished in short order, after which our destroyers, torpedo boats, and submarines might just as well never have been built, unless, of course, it is supposed that our first 700 shots will completely wipe out of existence any opposing fleet.

The torpedo is not a new weapon of war, but was employed with considerable success during the Civil War, and has since been passing through various stages of development until to-day it is a veritable ocean automobile of terrible destructiveness, capable of traveling 10,000 yards at a speed of approximately 30 miles an hour.

There are but two commercial manufacturers of torpedoes in the world, the Bliss Co., of New York, and the Whitehead Co., of Europe, so that our source of supply is limited to these two companies and the addition, of course, of the total output of our own plant at Newport.

The total annual capacity of the Bliss Co. is 200 torpedoes a year, while the capacity of our Newport plant is 100 torpedoes per annum, making a possible total of 300 projectiles each year under the most favorable circumstances, and in this connection permit me to say that we have contracted for some 500 torpedoes from the Bliss Co., which will insure their output to us for two years to come, but their capacity could be increased if our Government would place a substantial order with them for a reasonable delivery.

You will of course understand it would be impossible for us to purchase torpedoes abroad in time of war, even though we offer a liberal bonus to foreign powers for their supply on hand or in the process of manufacture. You might just as well expect them to sell us their battleships, which of course would be out of the question.

In 1891 the Chilean torpedo boats *Lynch* and *Condell* attacked the insurgent battleship *Blanco Encalado* in the harbor of Caldera, Chile, firing seven torpedoes at her, of which at least one and possibly two took effect, sinking her inside of five minutes.

The Japanese obtained control of the sea in the opening of their war with China when they at Wei-hai-wei torpedoed and sunk the Chinese vessels, accomplishing more in five minutes than might have been their good fortune in a long protracted battle, and then again profiting by previous experience the Japs duplicated the operation by sinking or crippling the best portion of the Russian fleet by an unexpected torpedo attack almost before war was declared, and thus obtained control of the sea during the war with Russia, and practically insured the final success of that terrible slaughter which is still fresh in our memories. Without control of the sea you will agree with me that Japan would have been as helpless on her little island as a mouse that has been trapped, and still in the face of all this information you go on appropriating for submarines and destroyers without insuring an adequate supply of torpedoes upon which their efficiency entirely depends.

I should like further to call your attention to the fact that a torpedo may be used almost indefinitely for target practice without impairing its efficiency, so that a goodly supply of them is like their equivalent value in cash which may be expended when war makes their use necessary.

Unlike the firing of a heavy gun, the cost of firing a torpedo in practice is almost nothing. It is sent out of the tube by air pressure, and manufactures its own motive power from a tank of several thousand pounds of compressed air after it reaches the water and is speeding toward its target.

After its force has been spent it remains on the surface of the water and is picked up and taken on board for recharging and further use.

SAVING A MILLION DOLLARS A YEAR ON ARMOR PLATE.

Mr. Speaker, I am not conscious of entertaining a prejudice against any sort of a legitimate American industry, and I am as anxious as any other Member of this body to encourage and foster any industry that means employment for the American workman; but I am opposed to offering continued encouragement to any business that, under a guise of pretended competition, places the United States Government, which happens to be the only customer for a particular commodity, in a position where it is compelled to pay an exorbitant price for an article necessary for the carrying out of a governmental policy.

For this reason, Mr. Speaker, a few days ago I introduced in the House a bill, which has been referred to the Committee on Naval Affairs for its consideration, providing for the erection of an armor making plant to be owned by the Government, operated by the Navy Department, and which will produce a large part of the heavy and expensive armor used in the protection of battleships.

For some months past there has been a growing conviction in my mind that vast sums of money could be saved the country by manufacturing, in part at least, its own armor plate, and that Congress should appropriate for the erection of a Government armor-making plant; and I am more than pleased that my opinion and belief in this matter has been confirmed by a report on the subject recently made by the Secretary of the Navy, who declares that the project is both practicable and desirable.

The bill which I have introduced provides for an appropriation of $7,000,000 for the acquiring of a site, the erection of suitable buildings, and the purchase of necessary machinery and supplies for the establishment and maintenance of an armor-making plant, active operation on the same to begin within six months after the passage of the bill.

Mr. Speaker, I believe that there is more to be said in favor of the construction of a Government armor plant than there is in behalf of almost any other form of Government enterprise. Armor plate is a commodity for which the Government practically is the sole customer and which has thus far been supplied to it under almost monopolistic conditions, owing to the small number of concerns and what apparently amounts to a mutual understanding as to bids between them.

In introducing this bill, Mr. Speaker, I have had in mind the breaking up, if possible, of the trust now controlling the armor-plate situation in this country; and the opening of the bids at the Navy Department a few days ago for armor for battleship No. 39, appropriated for last year, in which the bids of the three armor-producing companies in the United States corresponded exactly, and the same amount per ton as last year, showing so conclusively the collusion existing in the bidding, regardless of the fact that each bidder attests in an affidavit submitted with their respective bids that said company is not engaged in any such combination, conspiracy, or agreement, and proving conclusively that competition for this enormous amount of Government business is a farce, has determined me to press the bill as quickly as possible to a passage.

The only way to secure armor plate at anything like a reasonable price is for the Government to enter into direct competition in its manufacture with the companies already engaged in this work. I am not in favor of entering into the field to such an extent as to put the present armor-producing companies out of business, but to manufacture a sufficient amount of this commodity so as to force them into competition and compel them to offer us their armor at least at a fairly reasonable price.

Investigations recently made in this direction have shown that in a Government plant capable of turning out 10,000 tons a year, which is about half of the armor needed on a two-battleship program, the cost of the armor will not exceed $314 a ton. The difference between this and the amount bid a few days ago for the armor for battleship No. 39—which was exactly the same per ton as the bids submitted last year, $454—on 10,000 tons, at a saving of $140 per ton over the price now paid, the Government would save $1,400,000 per annum. Deducting the interest on the money used in building the plant, the Government will still save considerably over a million dollars a year, which amount in a very short time will cover the cost of the plant, and at the same time we will be independent of this branch of the Steel Trust. As a business proposition the plant would net the Government more than 17 per cent, or $1,200,000, on the entire investment, after allowing 3 per cent on the total expenditure.

In 1906 the price of armor plate was $346 a ton, in 1907 the trust jumped it to $420 a ton, and last year it was raised to $454 a ton. The price goes up constantly and remains up, and the evidence is not lacking that the price at the present time is based more upon what the companies think they can get than what it costs.

In the past the Government has encouraged as far as possible the development of private armor-plate factories. There are only three now operating which produce the heavy armor required for the battleships. These are the Bethlehem, Midvale, and Carnegie plants. To these three companies the Government has paid for armor plate since its introduction in construction of battleships more than $77,000,000.

It has been the custom in the past to give each of these three concerns an equal share of the contracts for plate, the price being fixed at the lowest bid offered by any one of the three companies. But it is easy to see how this arrangement has led to competitive bidding becoming the merest farce; for with the understanding that each was to get a share of the contracts, it was easy for the companies to arrange that their bids should

be not low in any sense of the word. And their grasping desire to take advantage of the opportunity placed in their way has led them to so overreach themselves that action should at once be taken by the Government to become independent of this trust.

The United States is not the only country which has suffered from the grasping manufacturers of armor plate. The "Armor Trust exists abroad as well as in this country, and it has contrived to keep up even higher prices on armor plate than the manufacturers in this country.

Three European Governments have undertaken to solve the problem of reducing the price of armor plate for themselves. France has sought to reduce the price of armor by erecting a plant which produces a portion of the armor needed for her ships, and which plant will be used as a basis for determining the actual cost of the manufacture of armor plate, and at the same time will be capable of being enlarged to a sufficient size to manufacture all the armor needed in the French navy.

The Russian Government has undertaken to manufacture all the armor plate required for its navy, and has adopted a plan to erect the plant and invite foreign manufacturers to come in and manage it for the Government.

Japan has built two Government armor-making plants, and it is believed that they are successful, though no information can be had regarding them; and in England the newspapers have recently been agitating the subject of a Government armor plant in order to break the monopoly and high prices which exist there.

Some years ago we were confronted with this same problem in the purchase of powder for the use of the Army and Navy. We built a powder plant, entered into direct competition with the powder companies, and to-day are saving $269.80 on each ton of powder.

We manufacture our own powder in part, we manufacture our own guns, and there is no reason in the world why we should not manufacture a part of our own armor plate. The cost of the plant is not prohibitive, and the cost of operation will not be a severe obstacle, and the saving will be enormous.

I am convinced that the Government should erect a plant large enough to manufacture a goodly portion of the armor required and give the rest of the work to such firms as are willing to bring their prices down to what will be shown by the Government plant to be a reasonable figure.

Since the introduction of my bill two of the companies forming this Armor Plate Trust submitted bids to the Navy Department for furnishing turbine drums for battleship No. 39, and were practically 300 per cent higher than the bid submitted by their only competitor, an English firm, which is but another evidence of the "strangle hold" they have had on Government business in the past. Of course their bids were rejected.

I am prepared to deliver in the ninth district illustrated lectures on the construction of the Panama Canal, its benefits, and so forth, to schools, clubs, societies, lodges, and church organizations, and have prepared a number of stereopticon slides from photographs taken during my visit to the canal in March, 1913.

Roads.

EXTENSION OF REMARKS
OF
HON. ROBERT N. PAGE,
OF NORTH CAROLINA,
IN THE HOUSE OF REPRESENTATIVES,

Friday, October 10, 1913.

Mr. PAGE. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include an address delivered in Detroit on September 30, 1913, by the Hon. DORSEY W. SHACKLEFORD, of Missouri, chairman of the Committee on Roads, House of Representatives.

The address is as follows:

"Mr. President, Ladies, and Gentlemen, I esteem it a distinguished honor to have been invited to address this great road congress. The deliberations of this body, if wise, must advance the civilization and promote the happiness of this already highly civilized and happy land.

"Nothing is more essential to the prosperity, the intelligence, and the happiness of the people than easy and convenient ways of travel and transportation. The degree of a country's civilization may, in a measure, be gauged by its highways.

"The term highway is not to be limited to mere roads but must be held to embrace oceans, rivers, canals, railways, and every other means over which people or property may be carried.

"No country has a more extensive and adequate system of highways than the States of this Union. With their vast coast line, indented by multitudinous harbors; their canals; their innumerable rivers, with unbounded possibilities for navigation; their millions of miles of well-constructed and efficiently maintained railways; their more than 2,000,000 miles of roads of varying degrees of perfection, the American people may well be proud of their possessions and their achievements in the matter of highways.

"The subject upon which I am expected to talk to-day is 'Federal road legislation.'

"Whatever doubts may have formerly existed, it is now generally conceded that the Federal Government has authority to construct and maintain roads which are used for Federal purposes. This granted, it follows that it also has authority to aid the States in the construction and maintenance of roads which are in part devoted to Federal use.

"There are at least three sources from which Congress gets power to legislate in relation to roads: First, to provide military roads; second, to provide post roads; third, to provide roads over which interstate commerce may be carried.

"To what extent these constitutional powers should be exercised is a question which will severely tax statesmanship to answer.

"Primarily it is the duty of the States to provide their inhabitants with roads, and it would be a long step backward if congressional legislation should afford them any means for avoiding this fundamental obligation. On the other hand, to provide an adequate system of roads lays a heavy burden upon the taxpayers of a State, and it is no more than justice that the Federal Government should contribute to the upkeep of the roads of the States which it uses in the performance of Federal functions.

"It can not be doubted that an overwhelming majority of the people want Federal road legislation; but, unfortunately, they radically differ in opinion as to what such legislation should provide. They are divided into two general classes, which for the purposes of this discussion may be designated as the 'touring-roads' class and the 'business-roads' class. The 'touring-roads' class is marching under a banner upon which is inscribed in letters of gold: 'See America first.' The 'business-roads' class is marshaling its forces under a flag which bears the legend: 'Cheaper transportation and lower cost of living.'

"The 'touring-roads' class is largely made up of rich automobile owners, who desire to spend a part of their leisure in touring the country. These are reenforced by manufacturers of road machinery and road materials, who regard Uncle Sam as 'good pay,' a liberal buyer, and one who would be a valuable customer if only he would embark in the business of building 'national roads.'

"The 'touring-roads' class demands that the United States shall limit its road activities to the construction and maintenance of a few 'ocean-to-ocean' and 'across-country' highways of great perfection and then leave the rest of the people to build their own roads or do without, as they may choose.

"The 'business-roads' class believes that in dealing with roads we must keep in mind their functions and the relation which they bear to the general transportation system of the country; that, as the harbor is the terminus of the river and the railroad, so, for practical purposes, the railway station is the terminus for roads; that neither freight nor passengers will ever be carried long distances over roads as cheaply as they could be over railways, and that it is an idle dream to imagine that auto trucks and automobiles will take the place of railways in the long-distance movement of freight or passengers; that the proper function of roads is not to connect antipodal oceans nor the distant capitals of far-away States, but to make easy communication between the farms on one hand and the towns and railway stations on the other, to the end that the farmer may market his crops at less expense and the town dweller may get farm products more easily and at less cost. They therefore favor a general system of roads radiating from the towns and railway stations out among the farms.

"I am quite convinced that a large majority of the people belong to the 'business roads' class, but they are not here to-day. They are at home sowing wheat for a harvest from which all of us must get our bread. They have neither the time nor the money to travel across the continent to attend road congresses. Nevertheless, Mr. President, they are the plain people—the producing masses—upon whom we must all depend.

"Mr. President, I have been accused of being antagonistic to automobiles and automobile interests. It is not true. I am an automobilist myself and a member of an automobile club. I believe that no economic instrumentality has contributed more

to the progress of our times than has the automobile industry. I do not want to see the number of automobiles in use diminish, but rapidly increase. I want to see the whole country supplied with a general system of average good roads and every farmer replace his horse and buggy with an automobile. I want the time to speedily come—and come it will—when the products of the farm are hauled to the towns and the railway stations in auto trucks, when the fields are plowed, the crops cultivated and harvested, by self-propelled tractors. If I shall live my allotted time, I will see all of this. Even now the time has already come when the automobile is no longer regarded as a mere toy of the idle rich, but as the utility vehicle of the plain, everyday business man. It also affords me pleasure to know that there are now more autos in the country than in the large cities.

"The 'touring-roads' advocates have two plans, by one of which they hope to secure some high-class 'see America first' boulevards.

"Their favorite plan is to have the United States, independently of the States, build and maintain a system of 'national roads.' If they shall not be able to get these 'national roads,' then their next plan is to have the Federal Government and the States jointly construct and maintain a limited mileage of excellent 'across-country' roads.

"Under both plans the primary purpose is to get 'touring roads.' To accomplish this they feel that they must, as far as possible, get away from local influence and local control.

"The 'national roads' movement has had most of its momentum imparted to it by the American Automobile Association and the National Highways Association. The first of these is an association formed to promote the pleasure of its members, to whom 'touring roads' are a necessity.

"The leading spirits in the other—the National Roads Association—are gentlemen who are, or have been, connected with the manufacture of road machinery and road materials. Both of these associations are dominated by men of the highest character and ability. They have abundant leisure and unlimited resources. They have devoted much time and money to their propaganda. Every year they collect and expend many thousands of dollars to cultivate sentiment for 'touring roads.' They have found the fountains of publicity. Wherever a road convention or a road congress has been held they have been in it with delegates enough to dominate it—to fashion and form its resolutions. They have even been powerful enough to place before the country in an unfavorable light those who have opposed their plans. Yet, Mr. President, at the hazard of being called a 'knight of the dirt roads,' or a 'pork-barrel Congressman,' I will avail myself of this opportunity to reason with these 'touring-roads' advocates—to convince them that the first duty of Congress on this, as on every other subject, is to legislate in a practical way, in the interests of the general masses of the people.

"Let us examine the 'national-roads' scheme.

"There are in this country about 2,250,000 miles of roads. Every mile of these roads is a prime necessity to the people who live along it.

"Mr. Charles Henry Davis, president of the National Highways Association, estimates that it would cost $20,000 a mile to build 'national roads.' At that figure our entire road system of 2,250,000 miles would cost $45,000,000,000. The human mind is paralyzed in contemplation of such an enormous sum. All the nations of the world could scarcely raise it.

"To escape from such a situation the American Automobile Association and the National Highways Association propose that only a limited number of miles of 'national roads' shall be built. Fifty thousand miles is the limit they suggest. This would leave 2,200,000 miles of roads unprovided for; and yet the people along these 2,200,000 miles of unprovided-for roads would be taxed to give these 50,000 miles of fancy 'national roads' to favored communities and favored classes.

"I hold in my hand a map of the United States showing the tentative location of these proposed 50,000 miles of 'national roads.' I can not take the time to analyze it as to all of the States. One or two will illustrate the whole scheme. Look at Ohio, for instance. One 'national road' is laid along its northern boundary, through the counties of Ashtabula, Lake, Cuyahoga, Erie, Ottawa, and Lucas—7 counties. The other is laid across the center of the State through the counties of Belmont, Guernsey, Muskingum, Licking, Franklin, Madison, Clark, Montgomery, and Preble—9 counties. All told, these 'national roads' in Ohio would touch only 16 counties and leave wholly untouched 72 counties. Yet to give 'national roads' to these favored 16 counties the other 72 untouched counties would be taxed. The entire mileage of these two 'national roads' through Ohio would not be much more than the mileage of improved roads which Hardin and Auglaze Counties have already built for themselves; but the enterprising people of these two counties would be taxed to build these 'touring roads,' over which the rank and file of them would never travel or haul a bushel of wheat in a lifetime.

"Let us take another State, Alabama. This 'national-roads' map lays one of these 'touring roads' through the counties of Dekalb, Etowah, St. Clair, Jefferson, Tuscaloosa, Green, and Sumpter—7 counties. Another passes through Cleburne, Calhoun, Bibb, Marengo, Clarke, Washington, and Mobile—8 counties. In the whole State of Alabama 15 counties are touched by these expensive highways and 52 counties are left wholly untouched. Yet these 52 untouched counties must be taxed to build luxurious roads through these favored 15 counties. After these untouched counties have paid this tax they may then build themselves some roads if they have any money left. These proposed high-class 'national roads' through Alabama would not aggregate more than 400 or 500 miles. Montgomery County alone has built more than that many miles of improved roads. Yet her wide-awake people would be called upon to help pay for these 'joy rider' roads, which would be too far away to ever be used by them.

"Let us look at these 50,000 miles of proposed 'national roads' from another angle. I recently read a paper by Mr. Charles Henry Davis, president of the National Roads Association, in which I find this statement:

"Fifty thousand miles of national roads at $20,000 a mile would cost a billion dollars.

"Now, the Federal Government will not likely expend more than $25,000,000 a year on roads. At that rate it would require 40 years to complete the proposed 50,000 miles. Long before that time shall have elapsed most of us will have died and gone to judgment. What we want is roads while we live.

"But Mr. Davis proposes that having once adopted the policy the Government would proceed to build one road at a time. In that event some States would be reached the first year and others not until the end of 40 years. Which would be the first lucky State? which the last unlucky one?

"Mr. President and gentlemen, don't you see that this 'national-roads' scheme is a dismal delusion?

"Now, just a word or two in relation to the other scheme for getting 'touring roads'—that of having the Federal Government and the States jointly construct a limited mileage of high-class 'across-country highways.

"The most concrete presentation I have seen of this plan is a bill now pending in Congress. I have not the time to analyze it in detail now. I shall content myself with calling attention to its two most salient features. As I said a moment ago, the 'touring-roads' class desire to get as far as possible away from local control. To accomplish this the bill to which I refer provides that a new office shall be created—that of public-highway commissioner—who shall keep his office at Washington, where he may not be influenced nor even impressed by the yearnings of the people among whom the roads should radiate. Then, 'to make assurance doubly sure,' the bill carries this further provision:

"*Provided*, That all questions as to the location, method of construction, and maintenance shall be finally determined by the commissioner of public highways.

"If such a provision as that shall ever be written into the Federal law, then, indeed, will the 'joy rider' reign supreme.

"Mr. President, it is not a road, nor yet few roads that we want. What we must have is a general system of good roads extending throughout the length and breadth of the land.

"I hold in my hand a pamphlet issued by the National Roads Association.

"On one page of this pamphlet is a picture of a rocky, muddy, impassable road. Beneath the picture in bold type is printed the words:

"'Poor roads—poor schools—ignorance—poverty.'

"On the same page is another picture—a picture of a good road under which, in equally bold type, is printed the words:

"'Good roads—good schools—knowledge—prosperity.'

"That is a pertinent illustration. According to this pamphlet, where good roads are there will be good schools, knowledge, and prosperity, while along bad roads poor schools, ignorance, and poverty will prevail. Yet this pamphlet advocates devoting 40 years to improve 2 per cent of the roads, leaving the people along the other 98 per cent groping in ignorance and poverty. Even worse than that, the National Roads Association proposes that the people along the 98 per cent of the roads who are thus to be left 40 years wandering in the wilderness of poor roads, must help pay the costs of the 2 per cent of the roads which the American Automobile Association and the National Roads Association would build to the end that the rich automobile owners may 'see America first.'

"Abraham Lincoln once said 'This country can not exist half slave and half free.' Paraphrasing that lofty utterance I say this country can not exist 2 per cent enlightened and 98 per cent ignorant—2 per cent good roads and 98 per cent bad.

"Mr. President, another fundamental error into which aristocratic classes fall is that there is no official wisdom and capacity except in Federal officers. Why may not a State officer possess wisdom, capacity, and devotion to duty to the same extent as a Federal functionary? Suppose you should create the office of public highway commissioner as asked for by the 'touring-roads' advocates. Where will you get a man to fill the office? Will Jupiter detail Mercury to bring us one from the ethereal realms above? No. You will have to take some citizen from some State, educated and trained in some State college. Can not the States get the same kind of men? Indeed, have not many of them already provided themselves with the best talent in the land?

"Oh, you say the States have been slow to grapple with the road problem. Sir, how much slower have the States been in this respect than has been the Federal Government?

"The States have not been slow in dealing with roads. On the contrary, they have made great progress, considering the difficulties they have had to meet.

"'Touring-roads' gentlemen beam with enthusiasm as they tell us of the good roads of France over which they have traveled. Why do not they go to the trouble to inform themselves of the fact that there are more miles of good roads in this country than there are in France. Every mile of these roads has been built by the States without either financial or engineering assistance from the Federal Government.

"Before the 'touring-roads' advocates berate the States for being tardy in road building let them consider the surrounding facts.

"The rapid changes which have taken place in the character of road vehicles and the method of their propulsion has thrown even the engineering world into confusion as to what should be the character of road construction to meet the demands of traffic. Roads which were sufficient for the uses to which they were put a decade ago are wholly inadequate for the traffic of the present day.

"Again, most of the States are hampered by archaic constitutions which prevent them from levying as much road tax as their people would cheerfully pay. It takes time to amend constitutions. However, they are doing it with much celerity.

"Until recently few of the States had provided themselves with adequate highway departments. In another year or two very few will be without them. Already some of the best administrative and engineering talent of the country has been secured by State highway departments.

"Road construction and road maintenance involves many mechanical and financial difficulties. Differences of climate, kinds of road material at hand, volume of traffic, and available road funds will require much variety in road construction and upkeep. These are problems for the States and their civil subdivisions. Roads are local affairs, and their control should remain with the States and the people in whose midst they are. The Federal Government should not invade this domain. Any Federal legislation which should in the slightest degree tend to belittle or discount States or State highway departments would be reactionary in the extreme.

"Where the States construct and maintain roads of such degree of perfection as to supply the Federal Government with highways over which to perform its functions with reasonable facility, then it should contribute to their upkeep.

"Of course, the Federal Government should see to it that it is not overreached in these expenditures. Congress should provide general standards of roads for which contribution would be made. The Government could then protect itself by inspection and a refusal to make payment for any road falling below specified standards. Such a system would not require much Federal machinery to administer it.

"Mr. President, I fully realize that I am not in entire harmony with the dominant spirit of this great roads congress. I am conscious that a majority of the delegates here are members either of the American Automobile Association, the National Roads Association, or some other organization affiliated with one of these. You, gentlemen, are seeking to promote the construction and maintenance of a limited mileage of excellent highways, while I am seeking to secure the construction and maintenance of a general system of good roads. You believe that a few very high-class boulevards stretched across the continent would serve as object lessons to the people generally. On the other hand, it is my opinion that if we should succeed in securing a general system of average roads they would be maintained in such manner that in a few years they would grow into high-class roads. You want 50,000 miles of expensive 'touring roads' to be built in 40 years. I want 1,000,000 miles of 'business and post roads' to be built in 5 years.

"Now, gentlemen, I know you are just as conscientious and public spirited as I am, and it is that consciousness which moves me to conclude my remarks in an appeal to you to withdraw your opposition to a plain people's plan, which we desire to pass through Congress at the next session.

"Our plan will be a modest one. It will not be expensive, and a vast majority of the people favor it. Get out of the way and let us try it out. If it fails, then we can take up one of your more ambitious schemes.

"In the last Congress we passed through the House a bill providing a yearly contribution to each mile of roads in the States which should be constructed and maintained according to specified standards. Although vigorously opposed, this bill passed the House by a vote of 240 to 86. It failed in the Senate, however. I am informed that the American Automobile Association claims the credit of its defeat. How that was accomplished has not been revealed.

"Had the bill become a law it is my candid opinion that within one year it would have given us 50,000 miles of improved roads and in five years would have given us a million miles.

"As a warrant for this expression of opinion let me cite some facts.

"Last winter the Legislature of Missouri passed a bill modeled after ours, providing that every mile of road in the State leading from county seat to county seat which should be built up to specified standards should receive aid from the State to the extent of $15 a mile. The State highway commissioner, who was charged with the duty of administering this law, refused to accept any road which was not 40 feet wide between fences, 30 feet wide between side ditches, so graded and crowned as to quickly shed water into side ditches, and provided with all necessary culverts, to be of stone or concrete. These are rather hard specifications. Yet that law has been in operation in Missouri only about six months, and 6,000 miles have been accepted by the State highway commissioner as having been brought within the provisions of the law. In many cases where public funds were not available money, labor, and material were contributed by private persons. Within a year this $15 a mile stimulus will have given the people of Missouri 10,000 miles of good roads. Had the same thing been done in the other of the 48 States a single year would have given us 480,000 miles of good roads.

"Recurring again to Missouri, Gov. Major, by public proclamation, set apart August 20 and 21 as road days, upon which he requested all able-bodied men to work the roads. Two hundred and fifty thousand men responded, and it is estimated that in labor and material there was more than a million dollars put upon the roads of Missouri during those two days. Later the governor of Arkansas issued a similar proclamation with similar results.

"These facts warrant me in feeling that if the Federal Government would stimulate the road movement by a very modest aid per mile of improved roads astonishing results would follow.

"Another lesson to be drawn from the facts which I have just cited from Missouri and Arkansas is that the States, the counties, and the people can be stirred to action, and that it would be unwise to take away from them the control of their roads and transfer it to Washington.

"Mr. President, I repeat that if only moderate encouragement by the United States is given to the States and local authorities we shall in five years have a million miles of good roads—roads over which you gentlemen may in comfort tour any part of this great country of ours.

"Won't you 'come over and help us'?"

Tariff.

EXTENSION OF REMARKS

OF

HON. ADOLPH J. SABATH,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, September 30, 1913,

On the adoption of the conference report on the bill (H. R. 3321) to reduce tariff duties and to provide revenue for the Government, and for other purposes.

Mr. SABATH. Mr. Speaker, this House is about to place its stamp of approval upon a measure of which we, as Democrats, have indeed reason to be proud. We can say to the country

that the Democratic Party has lived up to its traditions and, true to its pledges and promises, has enacted a tariff measure which will benefit the masses and not the privileged few, and which in years to come will stand out as one of the greatest tariff bills of all time.

For years the people of this country, under Republican misrule, have been obliged to suffer extortion at the hands of the protected interests which have so long been aided and abetted in their crimes by Republican legislation. For years the Republican Party has promised relief from these intolerable conditions, but in each and every instance has it failed to keep its promise. In 1908 the national convention of the Republican Party faithfully pledged that party to a revision of the tariff downward, with a corresponding decrease in the high cost of living.

President Taft, a Republican President, in an effort to carry out the pledges of his party, called an extraordinary session shortly after his election, for the purpose of revising the tariff, and what was the result? The Republican Congress, controlled by the trusts and the special interests, in that memorable session not only failed to lower the duties on the necessities of life but revised the tariff upward. The only excuse that they could give for this willful betrayal of the people was that contained in President Taft's celebrated Winona speech, when he frankly admitted that the Woolen Trust was too strong within the Republican Party to permit the reduction of the woolen schedule. Well might he have admitted what was known to every student of public affairs, that this statement applied not only to the woolen schedule but to every other schedule in the bill.

Nearly every section of the celebrated Payne-Aldrich bill was dictated by the special interests, and the public was not considered in the preparation of a single schedule, for was it not the aim of the Republican Party to enact legislation that would prove satisfactory to the protected interests, that they might again be in a position to demand large campaign contributions from these interests as the price of this legislation? Not only is it true of the tariff bill that it was prepared under the supervision of the protected interests, but this can be said as well of all legislation enacted by the Republicans.

Mr. Speaker, some years ago I stated on the floor of this House that the American people would not tolerate this injustice much longer; but, notwithstanding my warning, the Republican Party continued to pursue its tactics of making pledges and promises to better conditions, only to break these as soon as they were made. Finally, true to my predictions, the people arrived at the conclusion that they could expect nothing from a party which had betrayed them again and again, and they turned to our party, the Democratic Party, the party of the people, for relief. In 1910 they elected a Democratic House, and that Democratic House, true to its promises and faithfully abiding by the wishes of the people, passed several bills changing the most obnoxious schedules of the Payne-Aldrich bill. However, since the Senate was Republican and the President as well a member of that party, none of these bills were permitted to become laws.

Recognizing our honest efforts in their behalf, the people of this country not only returned nearly all of the Democratic Members to this Congress, but elected many others as well; and, not content with thus displaying the confidence they have in us, they also elected a number of Democratic Senators, thus changing the political complexion of that august body. Then, in order to insure hearty cooperation between the legislative and executive branches of our Government and to make doubly sure the carrying out of the people's wishes without delay, they placed in the White House one of the greatest Democrats and most able Executives that this Nation has ever known, Woodrow Wilson, whose record during the short time that has passed since his election stands unequaled.

Realizing that one of the greatest evils which confronted us was the system of high protective tariffs in vogue, the President immediately upon assuming his office called this extraordinary session, insisting that there should be enacted a tariff law that would relieve the people from the oppression and robbery practiced by the trusts and protected interests. Knowing, too, that under the present Republican system of banking and currency laws the country was at the mercy of the Money Trust, which had not only been permitted to flourish but had been aided by the Republicans in its unholy manipulations of the money market, President Wilson urged the enactment of legislation to relieve the country from the tolls extracted by the unscrupulous Wall Street gang and release the people from bondage. I am proud to say that in accordance with the President's wishes as expressed in his message to Congress a very meritorious currency measure has already passed the House and will shortly pass the Senate, and I am confident that this, together with the tariff bill that we are to finally pass to-day, will bring about greater benefits and greater blessings to the American people than any other legislation that has been enacted within the history of our country.

By enacting these two laws we will place the country upon a safe and sound business basis and eliminate the possibility of panics being brought about in the future, as they have been in the past, at the pleasure of the Money Trust. It will no longer be possible for Wall Street plunderers to control absolutely the money and credits of the country, and gather to themselves millions of dollars which rightfully belong to the laboring men of this country and which these parasites have used for their own aggrandizement and enrichment without ever considering for a moment the hardships and untold misery that they have inflicted upon millions of American citizens.

I fear I am digressing somewhat, however, for it is not my intention to speak on currency legislation; all that I desire is to place before the people my humble views on the tariff, and I shall endeavor to confine myself to that subject.

Mr. Speaker, as I have stated before, we have been called in extraordinary session to revise the tariff law, and time will tell whether or not we have revised it in the best interests of the American people; our work is completed and it will speak for itself. Personally, I am satisfied that there has never in the history of our country been any tariff legislation enacted which has been so carefully drafted as this bill, never a measure which contained as many meritorious provisions and from which the ultimate consumer would derive so much benefit. I am confident that the passage of this bill marks the end of the reign of the protected interests, which have during the Republican administrations absolutely controlled legislation of this character.

Mr. Speaker, I am more than gratified to know that nearly everything in the way of tariff legislation that I have fought for during the past six years is incorporated in the bill now under consideration. I have continually demanded, ever since my entrance into this House, the placing of the necessities of life upon the free list. I have insisted that if there is to be a tax upon our imports that it be upon the luxuries and not upon the necessities of life. In the Sixty-first Congress I introduced a bill which provided, among other things, that sugar should be placed on the free list. I regret that I have not been successful in securing the adoption of my bill as introduced, but I am satisfied.

The bill now under consideration reduces the duty on sugar 50 per cent immediately and provides that it shall be placed on the free list at the end of three years, this delay giving the sugar growers of Louisiana, Michigan, and Colorado an opportunity to adapt themselves to the changed conditions. Placing sugar on the free list will mean the removal of an annual tax of over $125,000,000 which has been exacted from the American people on this one commodity alone. I know that with the possible exception of a few sugar growers and the sugar barons, the people of this country will approve of this step which we have taken and appreciate the great saving that this will mean to every family. I know that the placing of this one article on the free list means to the residents of my district alone an annual saving of nearly $300,000.

The bill which I introduced in the Sixty-first Congress, and to which I have previously referred, provided that the following articles should be placed on the free list: Sugars of all grades, maple sugar and maple sirup, buckwheat and buckwheat flour, corn or maize, corn meal, oatmeal and rolled oats, oat hulls, rice of all grades, rye, rye flour, wheat, wheat flour and semolina, butter, cheese, milk (fresh), milk (preserved or condensed, or sterilized by heating or other processes), sugar of milk, beans, eggs, honey, peas of all grades, potatoes, freshwater fish, herrings, fish, cattle, swine, sheep, bacon, hams, fresh beef, veal, mutton, lamb, pork, meats of all kinds (prepared or preserved), extract of meat, fluid extract of meat, lard, poultry, and tallow. I am very glad to say that the bill now under consideration has greatly reduced the duties on these products or placed them on the free list, and I am satisfied that this will go a great ways toward reducing the present high cost of living.

A comparison of the Payne-Aldrich bill with the Underwood bill will show that the free list of the latter is much larger, while the tariff on every necessity of life has been materially lowered and the duty on the luxuries increased accordingly.

Mr. Speaker, I do not contend, and no one can expect, that all at once the prices on all of the necessities will be reduced, but we are even now commencing to see the effect that this legislation will have, and I am satisfied that within a short space of time the lowering of the cost of living will be felt by every consumer and will be especially evident to every housewife. This reduction will not only be evidenced in the lower prices of foodstuffs, but will make itself known in many other ways. Unless I am greatly mistaken, there should be a general reduction of from 15 to 25 per cent in nearly all things that we eat and wear.

Our Republican friends, as heretofore, are trying to mislead the American people by proclaiming that this legislation will have an injurious effect upon the country and will bring about a panic. They again charge us with having been responsible for the business and financial depression in 1893, when they are well aware that our legislation was in no way responsible for this, it being instead the result of the deliberate efforts of the protected interests and the Wall Street gang to discredit our administration. In their own hearts the Republicans know full well that the predictions they are making are false; they know that conditions throughout the country have not been affected by the election of a Democratic President, though it has been known that the tariff was to be revised downward. They know that never before in the history of our country has business been so stable during the consideration of tariff legislation. It has been demonstrated beyond the question of a doubt that the people have confidence in our party, that they have confidence in our administration, that they are confident that we will legislate for the best interests of the country. It must be clear to any right-thinking man that all of these prognostications of dire calamity to follow upon the enactment of this legislation are unjustifiable, that they have been made only for political purposes, the gentlemen making them having no premises upon which to base their conclusions, and that they are nothing more nor less than political buncombe.

The country to-day is on a sounder and safer basis than ever before, and conditions are growing better from day to day. Our manufacturer of to-day need not fear foreign competition, for we can, with only a few exceptions, produce better goods, in larger quantities, at less cost than any other nation on earth. We are to-day underselling the world. Our exports are greater than ever before. Our foreign commerce amounts to over $4,000,000,000 annually, and our exports exceed our imports by over $652,000,000. Every working day we sell over $2,000,000 worth more than we purchase. Is there another civilized nation on the globe to-day which can point to such a record? These figures should demonstrate to anyone that our "infant industries" can take care of themselves without a high protective tariff, for these same "infant industries" have assumed such proportions that they control the markets of the world. If any protection is needed, the people need to be protected from the monster trusts and combinations which were created under and have been fostered by the high protective tariff with which this Nation has so long been afflicted.

Mr. Speaker, our Republican friends have prophesied that were we to reduce the tariff it would immediately result in the marked reduction of our exports, the closing down of manufacturing enterprises of all classes and descriptions, and the consequent throwing out of employment of thousands of American workmen. What do we find to be the actual condition of affairs? The Monthly Summary of Commerce for June, 1913, issued by the Department of Commerce, shows that for the fiscal year ending June 30, 1913, our exports have exceeded those of 1912 by $258,186,530; that for the same period our imports of "crude materials for use in manufacturing" and "manufactures for further use in manufacturing"—in other words, the raw materials which are worked up in our factories—have exceeded by $130,385,511 those of 1912. Surely these figures demonstrate conclusively that our manufacturing enterprises are enjoying a healthy growth. A further inspection of the statistics prepared by the Department of Commerce will develop the fact that during 1913 our exports of "manufactures for further use in manufacturing" and "manufactures ready for consumption," these two classes embracing the output of our factories, exceeded those of 1912 by $156,537,973.

Will the Republican Members who have made such direful prognostications please explain to me in what way this activity on the part of the manufacturers is to be accounted for if it does not indicate prosperity? Here we have evidence which can not be controverted to show that business is thriving as never before; that our manufacturers, instead of planning to close down their factories, are spending millions upon millions of dollars for material with which to carry on their business and are shipping millions of dollars' worth of their products abroad to be disposed of at a comfortable profit. Everything would indicate that we are about to enter upon an era of prosperity which has never before been equaled in our history.

Mr. Speaker, I am absolutely certain that no legitimate manufacturer will suffer by this legislation; but, on the contrary, I am firm in my conviction that they will all eventually derive great benefit from it, and under this law our country will prosper as never before, while this prosperity will be enjoyed by each and every one of us and not alone by the few favored ones, as has been the case in the past.

In this bill, Mr. Speaker, we are relieving the workingman and the workingwoman—yes, 99.9 per cent of the people of this country—of burdens imposed upon them by Republican legislation enacted in the interest of the other one-tenth of 1 per cent—the favored few, the idle rich. In this bill we are not taxing the poor in the interest of the rich, we provide that the rich shall pay their fair and proper share of taxation, so as to relieve the masses from carrying the entire burden, as they have in the past, and this we accomplish by providing for an income tax.

Mr. Speaker, I admit that there will be found quite a large number of gentlemen who will strongly denounce the income-tax feature embodied in this bill; but upon close examination we will find that they all belong to that class of citizens known as "tax dodgers." These men will find it difficult—yes, well-nigh impossible—under the strict enforcement of this law by the Government, to evade the payment of a tax on their large incomes, as they have evaded the payment of city, county, and State taxes on their personal and real property.

The income-tax provision of this bill will reach and tax the concentrated wealth of this country and compel the individuals who control this wealth to pay a fair proportion of our Government expenditures. The greatest thinkers of the present age have advocated a tax on incomes and believe that it is a just and righteous tax. It is something for which I have fought for many years. In my speech on the floor of this House in 1909 I made the prediction that the day was not far distant when such legislation would be enacted, and now I have the opportunity of placing my stamp of approval upon a bill in which is embodied this very meritorious provision.

The income-tax provision on which the House and Senate have finally agreed calls for a tax of 1 per cent per annum on the net income of every individual, with certain deductions, and an additional tax of 1 per cent per annum upon the amount by which the total net income exceeds $20,000 and does not exceed $50,000, 2 per cent per annum upon the amount by which the total net income exceeds $50,000 and does not exceed $75,000, 3 per cent per annum upon the amount by which the total net income exceeds $75,000 and does not exceed $100,000, 4 per cent per annum upon the amount by which the total net income exceeds $100,000 and does not exceed $250,000, 5 per cent per annum upon the amount by which the total net income exceeds $250,000 and does not exceed $500,000, and 6 per cent per annum upon the amount by which the total net income exceeds $500,000. This section further provides "that there shall be deducted from the amount of the net income of each of said persons, ascertained as provided herein, the sum of $3,000, plus $1,000 additional if the person making the return be a married man with a wife living with him, or plus the sum of $1,000 additional if the person making the return be a married woman with a husband living with her, but in no event shall this additional exemption of $1,000 be deducted by both a husband and wife, provided that only one deduction of $4,000 shall be made from the aggregate income of both husband and wife when living together."

Of course, Mr. Speaker, as to myself, I find that I am discriminated against in this provision, but I believe in this instance it is just discrimination, and I stand willing and ready to pay the penalty for being a bachelor.

It is calculated that this tax, together with the tax on corporations, will net the Government $120,000,000 per annum, thus relieving the laboring people of the country of this burden and shifting it to the shoulders of those who can best afford to carry it.

Mr. Speaker, I believe that I have reason to rejoice when I can point to this legislation for which I have struggled and to which the Democratic Party has been pledged and which is now to be written upon our statute books, knowing as I do that it is in the interest of all of the people and not of the select few.

In conclusion I wish to congratulate the chairman of the Ways and Means Committee and his associates upon that committee upon their great display of unselfishness during all these long months while this legislation has been considered, and I want to congratulate the Democratic Party and the people of our country upon having witnessed the enactment of a measure of such great merit.

Urgent Deficiency Appropriation Bill.

EXTENSION OF REMARKS
OF
HON. JACOB JOHNSON,
OF UTAH,

IN THE HOUSE OF REPRESENTATIVES,

Friday, October 10, 1913,

On the conference report on the bill (H. R. 7898) making appropriations to supply urgent deficiencies in appropriations for the fiscal year 1913, and for other purposes.

Mr. JOHNSON of Utah. Mr. Speaker, in extending my remarks on the motion of the gentleman from California [Mr. RAKER] to concur in the Senate amendments Nos. 27 to 33, both inclusive, of H. R. 7898, I desire to say that I shall address my remarks more especially to amendment No. 33—the assay office at Salt Lake City, Utah.

This office was created by act of Congress many years since, and has been in successful operation ever since. That there was a necessity for its creation there can be no doubt, and that such necessity still exists is also equally certain. Also, that to enable said office to continue operations the small appropriation of $1,000 is equally necessary. This sum is required for the purchase of supplies, fuel, light, and so forth, and without which the office can not continue its operation, as I am advised, longer than to the 1st of January next. Unless this small appropriation is made the office must cease operation at that date.

The Salt Lake assay office is located at Salt Lake City, Utah, in the very center of the gold and silver producing region, not only convenient to the mines of that State but also to adjoining States, and acts as a kind of clearing house for the disposition of the bullion of that region.

It is absolutely necessary that there should be some place in reasonably close proximity to the mines at which the miner can ascertain the value and dispose of his bullion, the product of his industry.

As I have before stated, the mining industry of the State of Utah is one of great importance to the State and to the Nation. The gold and silver extracted from the hills form an important basis for business and for the credit of this Nation.

It furnishes employment to the citizen, a market for the product of the farm, and adds substantial wealth to the State and Nation without injury to anyone. It comes not in conflict with other industries, but rather aids them. Those engaged in the business of mining are constantly exposed to great hazards and risks, and, as I believe, are entitled to some consideration from the Government and should be fairly treated by it.

I can not forget that when, in 1862 to 1865, we were engaged in a civil conflict and the credit of the Government was much lower than it now is that it was the stream of gold and silver constantly flowing from the Western States and Territories to the Eastern States and into the war chest of the Government which contributed in no small degree to uphold the hands of the Government and its credit in its time of need and tended directly to the maintenance of credit generally.

It is even doubtful if specie payment could have been accomplished as promptly as it was but for the mines of the West. Why now abandon that industry, which has done so much for the Nation, its business and credit, by refusing to make this niggardly appropriation for its benefit and the benefit of the Nation as well?

The following table shows the amount of gold and silver, in value, produced in the State of Utah from 1877 to 1912, inclusive:

Year.	Gold.	Silver.
1877	$358,107	$5,321,643
1878	276,874	4,722,159
1879	325,180	4,105,471
1880	165,773	4,029,501
1881	144,317	5,522,762
1882	186,836	6,114,874
1883	144,593	4,984,939
1884	114,305	6,123,047
1885	184,025	6,211,596
1886	218,620	5,860,837
1887	235,369	5,976,884
1888	287,023	5,787,527
1889	516,233	6,656,249
1890	699,700	8,492,209
1891	747,427	8,759,206
1892	789,331	7,792,388
1893	1,117,608	5,233,965
1894	1,666,246	4,199,674
1895	1,302,199	5,356,032
1896	$1,940,830	$5,843,868
1897	1,663,362	4,522,038
1898	2,168,283	4,403,854
1899	3,581,408	4,612,351
1900	4,263,414	6,248,610
1901	3,945,303	6,243,491
1902	4,007,189	5,648,814
1903	4,904,660	5,886,157
1904	5,688,714	7,143,516
1905	5,140,950	6,127,999
1906	5,218,396	7,686,193
1907	5,121,646	7,459,987
1908	3,946,700	4,457,357
1909	4,313,300	5,376,572
1910	4,312,700	5,652,164
1911	4,696,998	6,511,108
1912	4,300,000	7,995,039
Total	77,643,526	213,075,062

I will not now take up the time necessary to recapitulate the other metals produced in the State for the above period of time, but suffice it to say that in the year 1912 the total value was in the sum of $44,414,000, inclusive of rare minerals, divided as follows:

Gold	$4,300,000
Silver	7,995,000
Copper	24,755,000
Zinc	1,069,000
Lead	6,300,000

In addition to the above, there is shipped annually to Salt Lake City from adjoining States a large quantity of such metals for assaying and sale, the exact amount of which I have not now at hand.

It would appear that the precious metals accumulated at that point would be sufficient to justify the maintenance of an assay office there to enable the miner to ascertain the value of his produce and dispose of the same, but this can not be done without the appropriation contained in the Senate amendment.

If it is the policy of this administration to strike a blow at the mining industries of the Western States by refusing to make the necessary appropriation for their continued operation, then abolish them by act of Congress enacted in the open and not by a miserable subterfuge.

Mock not the predestined victims with the delusive hope of a continued existence, when in your minds you have determined to accomplish their demise. And when the streams of gold and silver shall cease to flow from the mines of the West to the coffers of the East because of better accommodations elsewhere for their marketing, you will probably realize that the present demands of the western miners—that assay offices be maintained in close proximity to the mines where the metal is produced—were not unreasonable and should have been granted.

Urgent Deficiency Appropriation Bill.

EXTENSION OF REMARKS
OF
HON. J. B. THOMPSON,
OF OKLAHOMA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, October 11, 1913,

On the conference report to the bill (H. R. 7898) making appropriations to supply urgent deficiencies in appropriations for the fiscal year 1913, and for other purposes.

INCREASE OF POLICE FORCE.

Mr. THOMPSON of Oklahoma. Mr. Speaker, I felt constrained on yesterday to vote against the adoption of the report of the conference committee, for the reason that it carried a provision increasing the number of the Capitol police by 14 and appropriating an additional sum of $11,925 for their pay.

The Democrats at the expiration of 16 years, in 1910, by the votes of the American people, were given control of this House largely because of the extravagance of the Republicans. Fresh from the people, one of the great reforms inaugurated by the Democratic Congress, a reform which met with instant and universal approval on the part of the country, was a reduction of $200,000 per year in the expenses of this House. I venture that no fact was more often referred to and none more eloquently dwelt upon by Democratic orators during the campaign of 1912 than this remarkable saving to the taxpayers by a Democratic House. Now that we have been trusted again on the splendid record of economy that we then made, are we to prove false to our promises and begin an unparalleled course of useless expenditure and extravagance in the face of our campaign pledges? I for one am unwilling to do so. I know that I pointed out in my campaign this remarkable saving to the people; that I stated to the people that I approved of it at that time; and I say to the House that I approve of it at this time. I am unwilling to be put in the attitude of saying one thing to the people and another thing to this House.

A MEMORIAL BRIDGE ACROSS THE POTOMAC RIVER.

There are a number of other provisions in this bill which I oppose, and I am glad that the conference committee on the part of the House likewise opposes those provisions and disagreed with the Senate with reference to them, and that they have been brought back here and will be submitted to this House for a separate vote, so that every Member here can go on record and the American people may know exactly how he stands with reference to useless and extravagant appropriations. I am opposed to Senate amendment 82, which appropriates $25,000 for the purpose of investigating and reporting to Congress a suitable design for a memorial bridge across the Potomac River from the city of Washington to a point at or near the Arlington estate, in the State of Virginia. I do not believe the people of this country ought to be taxed for the purpose of erecting memorial bridges and memorial buildings in the city of Washington or elsewhere in the United States. The erection of private buildings and bridges with money wrung from the toiling masses of the American people I think is unnecessary, unwise, and in direct violation of the Democratic promises of economy in the expenditure of the public money.

It will be noted that the purpose of this amendment is the appropriation of $25,000 to investigate and report to Congress a suitable design for a memorial bridge across the Potomac River. If that meant the end of this matter, it would not be such an important item as it is, but this appropriation is but the beginning, and if made it means that from five to ten millions of dollars will be taken from the pockets of the taxpayers and put into this proposition before the bridge is completed. Our people are burdened enough as it is, and I protest at this time against this small appropriation in order to save the millions that will necessarily follow.

It has been stated here that this bridge will be called the "Grant and Lee Bridge," and an attempt has been made to influence our votes by the patriotic pride we all share in these two illustrious Americans. I am satisfied if these distinguished men could be consulted with reference to this project that they would protest against the use of their names in connection with a scheme that means so much additional burden to the already overburdened people. It has been stated by the distinguished gentleman from Kentucky [Mr. JOHNSON], chairman of the Committee on the District of Columbia, of which I am a member, that behind this whole proceeding—this propoganda for the erection of this bridge—was a real estate scheme on the part of certain Washington real estate men. My observation since I have been a member of this committee convinces me that the statement of the chairman is correct, and I am unwilling to vote for the enactment of any law that places a burden of taxation on the people of this country to enrich and make millionaires out of a few real estate speculators in Washington.

AN AUTOMOBILE FOR THE VICE PRESIDENT.

I am also opposed to Senate amendment No. 93, which provides for the purchase of an automobile, including driving, maintenance, and care of the same, for the use of the Vice President of the United States, and appropriating $7,000 for that purpose.

I am a great admirer of the present Vice President of the United States. I have watched his course since he became governor of the great Commonwealth of Indiana with pride and admiration. I believe him one of the greatest disciples of the simplicity of Thomas Jefferson living in our country to-day. I can not believe that he sympathizes with this expenditure of the people's money. He is essentially one of the people of this country. By force of his genius, his ability, his integrity, and his great fund of common sense he has risen from a position of obscurity until he occupies the second highest office within the gift of the American people. He has always been a frugal and economical man, opposed to extravagance in government, and practicing economy in his own business affairs. He accepted the nomination to the high office which he now holds when there was no law on the statute books authorizing an appropriation of this kind. I do not think he expects it now, and I feel absolutely sure that he will not be disappointed if this item of expenditure is denied.

Two years ago, while a Republican occupied the high position of Vice President of the United States, a Democratic Congress refused an appropriation for this very purpose. I do not see how we can go before the country and claim to be consistent if we give to the Democratic Vice President that which we withheld from a Republican Vice President. We have heard no reason advanced why we should change our policy of economy on this subject, and inasmuch as I approved of the action of the Democratic Congress when this item was rejected two years ago. I shall vote to reject it at this time.

AN EXTRA MONTH'S PAY TO THE OFFICERS AND EMPLOYEES OF THE SENATE AND HOUSE OF REPRESENTATIVES.

Mr. Speaker, I am also opposed to Senate amendment No. 97, which appropriates a sum equal to one month's pay at the compensation now allowed them by law to enable the Secretary of the Senate and Clerk of the House of Representatives to pay to the officers and employees of the Senate and House of Representatives and the employees on the maintenance roll of the Senate Office Building borne on the annual and session rolls on the 1st day of October, 1913, an extra month's pay.

If this provision is adopted we will have returned in full to the extravagant practices of the Republican Congress in the palmiest days of "Cannonism." The rejection on the part of the Democratic House elected in 1910 of this custom, which had grown up in the long misrule of the Republicans, was hailed by the country as a healthy sign of economy on the part of the Democratic Congress. Now that we have been twice trusted with power, is it possible that we have so lost sight of the burdened tax-paying masses of this country that we will vote a gratuity to a number of employees who are not compelled to accept these positions, but who, on the contrary, arduously seek them? These positions pay quite well. The salaries in practically all instances amount to $100 per month where the employment runs for 12 months of the year, and in the cases of session employees the period of employment will also be 12 months during the present session, so that each class of the employees will, without this provision, have received at the end of the year an annual salary on an average amounting to $1,200, some of them amounting to a great deal more and in only a few instances to a small amount less. Their positions are not affected by a scourge of grasshoppers nor subject to the depredations of the boll weevil. Too much rain does not affect it and a drought does not blast it. Their salaries are known and their checks come regularly. I assert, without any fear of contradiction, that if the power were mine to fill all these places I could do so many times over from the district that I represent in Oklahoma at a saving of 25 per cent on the salaries now paid by appointing splendid and competent men, with a guaranty that they would not ask an extra month's pay out of the Federal Treasury.

My opposition, Mr. Speaker, to this amendment does not arise out of any opposition to the officers and employees of this House, because for them and each of them I have the kindliest feeling and would be glad to see them prosper in every possible way, but I can not bring myself to the belief that the struggling taxpayers of this country ought to be burdened with an extra tax in order to give them an extra month's pay, which is not provided in their contract, which they have not earned, and which would be a mere gift or gratuity. We owe no duty to these officers and these employees. We have discharged our contract with them to the very last letter. We do owe a duty to the struggling working people of the United States—a duty to take just as few dollars away from their pockets as we possibly can in order to economically run this Government. It is not right to go into the cotton fields, the cornfields, and the wheat fields of Oklahoma and force the little barefooted girls and boys, shivering in the cold of the morning and writhing in the heat of midday, and exact from them an added tax to discharge this gift.

These employees are paid for 12 months' work whether Congress is in session or not, and, in addition, they are allowed one month vacation during each year. They are therefore paid for 12 months' work when they actually perform only 11 months of labor. If this amendment is carried they will be paid for 13 months' work, while they actually perform only 11 months of labor.

The acceptance by the House of this Senate amendment will add a quarter of a million dollars per year to the pay roll of this House—more than the Democratic House two years ago saved to the people by cutting down Republican extravagance.

EXTRAVAGANCE IN GOVERNMENT.

In 1909 the officials who were on the pay roll of the United States and whose salaries, not including expenses incident to their employment, were paid by the American people were 370,065—more than one-third of a million. The employment of extra policemen, the unnecessary appropriations for automo-

bills, the adding of an extra month's pay to the officers and employees of the House and Senate, however, is but in keeping with the history of this Government since its organization, but as it has grown older the extravagance has become more marked and noticeable.

In 1816 the number of officials on the pay roll of the United States was 6,327. They had increased to 40,212 in 1863, and in 1871 they had increased to 53,912. In 1881 there were 107,095 on the pay roll. In 1899 they had increased to 208,215, and in 1909, as I have just shown, they had increased to 370,065, an increase of 161,850 during the period between 1899 and 1909, or a little more than 16,000 per year. The expenditures of the legislative department of the United States as compared with the expenditures of the British House of Lords and House of Commons is as follows:

The appropriation for the support of the Senate and House of Representatives of the United States for the year 1907 was $12,788,886, as against $512,000 for the support of the two Houses of Parliament of Great Britain. There was spent during the same year for the maintenance of buildings, furniture, fuel, stationery, printing, and general supplies in Great Britain $980,000, as against an appropriation of $6,394,810 to support the Public Printer in the United States; and this, Mr. Speaker, in the face of the fact that we are the people of a great Republic supposed to be free from useless extravagance.

EXEMPTING DEPUTY MARSHALS AND DEPUTY INTERNAL-REVENUE COLLECTORS FROM THE CIVIL SERVICE.

Mr. Speaker, on last night I voted for the amendment of the gentleman from Georgia [Mr. BARTLETT], which directed the conferees to recede from their disagreement with Senate amendment No. 8 and to concur therein with an amendment. This amendment provides that any deputy collector of internal revenue or deputy marshal required by law or by authority or direction of the collector of internal revenue or the United States marshal to execute a bond to the collector of internal revenue or the United States marshal to secure the faithful performance of official duty may be appointed by the collector or marshal without regard to the provisions of the civil-service act.

Mr. Speaker, if the civil-service law had been honestly administered in the past there would not be the great prejudice, in my judgment, against it that exists at this time, but it has not been administered in that way. It has been a mere subterfuge by which the Republican politician could place his "ward heeler" in office and at the same time satisfy the demands of a large number of very splendid people in this country who are sincerely in favor of the merit system. Any man who has lived in the Southern States knows the hypocrisy of the Republican pretended friendship for the civil service. I think it will be admitted that the Democrats of the South are equally as intelligent as the negro population of that section of the country that largely constitutes the membership of the Republican Party; and yet throughout the South under the farcical enforcement of the civil-service law intelligent white Democrats in an examination have been surpassed by negro Republicans, who have been elevated to office over them. In a large number of cities in the Southern States practically all the mail carriers are negroes, appointed under what our Republican friends call the "beneficent provisions of the civil-service law," over intelligent and honorable white men. Then, again, the Republicans have had all executive offices, such as postmasters, United States marshals, and internal-revenue collectors, and by manipulation these chief executive officers have promoted Republican employees over such few Democratic employees as were able to stand the civil-service examination and secure a position.

If we are going to have the civil service, let us have a real civil service and not a farcical one. No more farcical enforcement of the provisions and intentions of the civil-service act can be imagined than the Executive order of President Taft covering all fourth-class postmasters, amounting to 35,000 in number, putting them into the classified civil service, and thus perpetuating them in office during the remainder of their natural lives without any examination or competition whatever. Be it said to the credit of the present administration that this order has been set aside in so far as it gave them a life tenure of office without a competitive examination, and the citizenship of this country, irrespective of party, will be permitted in a short time to take the examination, and it is hoped that a large number of Democrats will succeed in securing these appointments. I say "hoped" because it will be for the good of the public service. I am not one of those who believe that it is a discredit to a man to be a Democrat and to be a Democratic worker. If the principles of Democracy are right, then it is the duty of all good men to promote those principles and to assist in enacting them into the laws of the land. I do not belong to that class who are willing to accept the support of a Democrat before election and attempt to make capital and popularity for myself by abusing that Democratic worker after the election. I am opposed to "rings," "cliques," and "shell-game" performances in politics, because I have observed that the class of men who usually carry on those kind of performances are willing to give their allegiance to any party that promises the most in return; but for the honest, open, and fearless Democratic worker who in season and out of season carries the burdens of his party because he loves its principles, its history, and its traditions, and who earnestly and sincerely believes that the prosperity of this country will be promoted by the enactment of those principles into the organic law of the land, I have the highest regard, and I believe that he is entitled, like the veteran soldier, to the very best reward that his party can give him. I believe when the Democratic Party goes into power that the offices—not the offices where expert and technical training along a particular line is required, but executive offices, where a policy is to be enforced—should be filled by Democrats who are in sympathy with the Democratic administration, and that the execution of the policies and the ideals of an administration should not be trusted to hostile hands.

Since the present administration has been inaugurated we have had a very notable example of the advantage taken of the administration by leaving in office a man who was not in sympathy with the administration. The United States attorney for the northern district of California, Mr. McNab, was permitted to hold office after the inauguration of the present administration.

The administration made a suggestion to him with reference to the prosecution of a case. He immediately refused to follow the suggestion, resigned his office, took advantage of his agency, exploited his resignation before the public, and did everything he possibly could to embarrass those who had permitted him to continue in the public service. This course was followed in order to promote his own personal welfare and the welfare of the Republican Party. It would not have occurred had the office been occupied by an appointee who was in harmony with the administration. The subsequent conduct of the administration and the final result of the prosecutions illustrate the wisdom of the course pursued by the administration and the clear purpose on the part of District Attorney McNab to make political capital out of his position.

I do not believe that an internal-revenue collector or a deputy marshal who can stand the best examination in geography, arithmetic, spelling, and grammar is the best qualified man to make arrests of desperate criminals. Our Republican friends are preaching what they never practiced when in office. When the oleomargarine law was passed it provided that the force to carry into effect its provisions should be selected without regard to the civil service. When the denatured-alcohol bill was passed it provided that its provisions should be carried into effect by a force selected without regard to the civil service. When the Payne-Aldrich bill carrying the corporation-tax section was passed it provided that the provisions of that section should be enforced by employees selected without regard to civil service. All of these acts were passed during a Republican administration and when the Republicans were in complete control of the executive and both branches of the legislative department of our Government. We heard no cry from the Republicans at that time, and the Democrats, be it said to their credit, did not make the hypocritical fight that we are witnessing at this time.

Mr. Speaker, the fact that 95 per cent of the positions which have been filled by the civil service are occupied by Republicans shows that the Democrats were right when they said in the Baltimore platform:

We favor a reorganization of the civil service.

CONTINUING THE TERM OF THE JUDGES OF THE COURT OF COMMERCE.

Mr. Speaker, this bill as originally passed by the House abolished the Commerce Court created by the act of June 18, 1910, and legislated out of office the five additional circuit judges created by that act. Senate amendment No. 61 agrees to the provisions of the act as it passed this House originally, with the proviso that the circuit judges should continue in office and continue to draw the salary until they resign or are removed by death or otherwise. This amounts to a gratuity to these judges. The offices that they were appointed to fill have been abolished. The Senate amendment places us in the peculiar attitude of abolishing the office and continuing the judge for life on the pay roll of the United States. I am opposed to this. It is clearly within the power of Congress, in my judgment, to abolish these positions and to legislate these judges out of office.

Congress, by creating this court and providing for the appointment of these judges, is in a most peculiar and awkward position if it now finds itself without authority to recall them.

I do not believe that the creature is ever greater than the creator. I believe that the people who constitute the Government of the United States should have the power at all times and under all circumstances to recall any official whose services are not satisfactory.

The principle of the recall is neither unrepublican nor unfair. In this Republic we take the Declaration of Independence as a fairly good expression of democratic principles. Thomas Jefferson said in that document expressive of the hopes and aspirations of an oppressed and liberty-seeking people:

We hold these truths to be self-evident: That all men are created equal; that they are endowed by their Creator with certain inalienable rights; that among these are life, liberty, and the pursuit of happiness; that to secure these rights governments are instituted among men deriving their just powers from the consent of the governed; that whenever any form of government becomes destructive of these ends it is the right of the people to alter or abolish it and to institute new government, laying its foundation on such principle, and organizing its powers in such form as to them shall seem most likely to effect their safety and happiness.

Mr. Speaker, if the power were mine I would not stop at abolishing the Commerce Court and legislating out of office the five judges that constitute that court, but I would abolish every inferior Federal court in the United States and legislate out of office every inferior Federal judge. I would not do this because of any hostility to the courts, because I believe in law and order and the orderly administration of the law. It has been my observation that judges appointed for life often lose sympathy for the great struggling masses, and when a man loses sympathy for and interest in the welfare of the people and the great problems of life which daily they are compelled to meet, he is not a fit person to hold any position, much less a high judicial position. I am more disturbed and more anxious to stay the arbitrary power of the Federal judge than I am to keep down a large army. I believe there is less danger to the people of the country in a large army than there is in life tenure in office for inferior Federal judges. The Army can not be used for oppression unless it is so directed by the executive department of the Government. The Executive is elected every four years by the people and is responsible to the people, and for this reason the occasions will be rare where wrong or oppression grow out of a large army. Federal judges appointed for life, who make reports to no one and are responsible to no one for their official conduct, who are sometimes wined and dined by the special interests and carried over the country in the palatial private cars of monopoly, will occasionally believe that their friends and associates are correct in their views and that the people—the struggling people—are wrong.

I would transfer the jurisdiction of these inferior Federal courts to the State courts, where a case could be tried in the county of the residence of the parties, and if a Federal question were involved I would permit a final appeal to the Supreme Court of the United States for settlement of that question. We have all in our experience seen cases where suits were brought against corporations in the State court for damages by reason of personal injury or otherwise. We have seen these cases transferred to the Federal court on account of diversity of citizenship, and we have seen the plaintiff, by reason of his poverty, compelled to dismiss meritorious cases because he was unable to take his witnesses and go many hundred miles to the seat of the Federal court in order to try his cause.

Down in my State the Federal courts have been lavish with writs of injunction. Our 2-cent-rate provision in the constitution was enjoined, our tax laws were enjoined, the orders of our corporation commission fixing freight rates were enjoined, and the corporations went glibly on while the people paid the bill, and all because of the action of inferior Federal judges who, without notice and without a hearing, tied up the laws of a sovereign State.

Mr. Speaker, the gentleman from Georgia [Mr. BARTLETT] when charged by the gentleman from Wyoming [Mr. MONDELL] with favoring the recall denied it. Unlike the gentleman from Georgia [Mr. BARTLETT], I am in favor of the recall. I believe this Government will be a better Government; I believe that the officers and agents of the people will be better officers and better agents if they understand and know that the people at all times have the right and power to remove them if they fail to discharge with fidelity the duties of their positions. There is no reason in contending that a private individual should have the right to discharge his agent or employee at any time and in withholding this same right from the public. No man would employ an agent and turn over to him the conduct of his business affairs for the period of two or four years without a provision in the contract that the employer might discharge the agent at any time his services were unsatisfactory. If it is a wise provision in a contract for private employment, why is it not a wise provision in a contract for public employment?

We have the recall now, except the people do not exercise the authority. Under the law the President of the United States can recall a postmaster, United States attorney, or a United States marshal, and the Senate of the United States can recall a Federal judge. The same is true of the governor and senate of the States with reference to State officers. Is it possible that these officials, who under existing law have the power to recall, are better prepared and more capable of determining whether the services of an official whom they never met, and who resides many hundred miles away from them, are satisfactory to and for the best interests of the people than are the people themselves? Is it possible that a few men have more judgment and are better able to determine what the people need and what they want than are the people themselves?

The right to recall will do away with the necessity for a recall.

When a public servant knows that the people have a right to discharge him if he fails to render satisfactory service he will be sure to see that his services are satisfactory.

Mr. Speaker, the Democrats were trusted by the people and given control of this great Government on certain promises made in the Baltimore platform. Among these promises we said that we would reduce taxation so as to take from the people only what was necessary to run this Government on an economical basis. We further said that we would restore to the people the control of this Government. If we do what we promised; if we strike down all useless appropriations; if we relieve the people of the unjust burdens imposed upon them by special interests and enact laws that will insure equal opportunities to all the people, we will continue in power for the next generation. If we fail to do what we promised we will be, as we ought to be, hurled from power by an outraged and disappointed people.

Urgent Deficiency Appropriation Bill.

EXTENSION OF REMARKS

OF

HON. WALTER I. McCOY,

OF NEW JERSEY,

IN THE HOUSE OF REPRESENTATIVES,

Friday, October 10, 1913,

On the conference report on the bill (H. R. 7898) making appropriations to supply urgent deficiencies in appropriations for the fiscal year 1913, and for other purposes.

Mr. McCOY. Mr. Speaker, I wish to thank the gentleman from Illinois [Mr. MANN] for not objecting to my request for leave to extend in the RECORD my remarks in regard to this very important amendment of the Senate, because of the fact that being paired my vote will not stand recorded against it.

A distinguished Democrat, writing in the year 1888 about the "spoils system," stated that it has been—

an evil second only to slavery, and from which we are only now recovering.

Another straight-seeing and clear-thinking Democrat, Thomas H. Benton, said in the early fifties:

I consider "sweeping" removals as now practiced by both parties a great political evil in our country, injurious to individuals, to the public service, to the purity of elections, and to the harmony and union of the people. Certainly no individual has a right to an office; no one has an estate or property in a public employment. But when a mere ministerial worker in a subordinate station has learned its duties by experience and proved his fidelity by his conduct it is an injury to the public service to exchange him for a novice, whose only title to the place may be a political badge or a partisan service. It is exchanging experience for inexperience, tried ability for untried, and destroying incentive to good conduct by destroying its reward. To the party displaced it is an injury, having become a proficient in that business, expecting to remain in it during good behavior, and finding it difficult, at an advanced age and with fixed habits, to begin a new career in some new walk of life. It converts elections into scrambles for office and degrades the Government into an office for rewards and punishments, and divides the people of the Union into two adverse parties, each in its turn, and as it becomes dominant, to strip and proscribe the other.

More than 80 years ago a Federal officeholder, writing about removals, said:

I turned out six clerks on Saturday. Several of them have families and are poor. It was the most painful thing I ever did, but I could not well get along without it. Among them was a poor old man with a young wife and several children. I shall help to raise a contribution to get him back to Ohio.

I need not add anything further to show that the "spoils system" is brutal, demoralizing, and dangerous and that the "merit system" is founded on true democracy and a desire to

give the country the best that can be given in the way of public service. The pledge of the Democratic Party, frequently reiterated, is based on this belief and is not a declaration made in a single instance to meet a passing whim of the people.

I am sorry to think that Members of Congress belonging to the Democratic Party are willing to take the risk of creating the belief that the "merit system" is to be broken down, for even the suspicion of such a possibility generally entertained by the voters of the country would result in disaster to our party. So I hope that, notwithstanding the inconvenience which might be caused by a veto of the urgent deficiency bill, the President will see his way clear to take that action should it contain the Senate amendment which to me is so objectionable. In my opinion nothing that he has done or shall do can add greater strength to his already strong hold upon a large majority of the people of this country.

Vocational Education, Freight Rates, and Parcel Post.

"Who saves his country saves all things, and all things saved bless him;
Who lets his country die lets all things die, and all things dying curse him."

EXTENSION OF REMARKS
OF

HON. GEORGE J. KINDEL,
OF COLORADO,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, October 2, 1913,

On the joint resolution (S. J. Res. 5) providing for the appointment of a commission to consider the need and report a plan for national aid for vocational education.

Mr. KINDEL. Mr. Speaker, I do not want to be understood as opposing vocational education or opposing any plan whereby the Federal Government may aid the States in training their children in a manner to make them better and more prosperous citizens. I am strongly in favor of vocational education, and I do not think any part of the Federal revenues could be better spent than that part which I hope will be spent in the future to make our people of the South better farmers, fruit growers, and stock raisers, our people of the East better manufacturers and merchants, and our people of the West better in every line of commercial and industrial endeavor, for there is no vocation from mining to manufacturing in which the West will not lead the country when we get equitable transportation rates.

But I want to take this opportunity to urge the importance of vocational education in transportation and transportation rates. I want to see every possible avenue opened for increasing the efficiency of the American farmer, but the American farmer can never be prosperous unless he enjoys reasonable and fair freight rates. The manufacturer may improve his machinery and his business organization until he can produce his goods at the lowest possible cost and with the highest degree of perfection, yet he must fail inevitably if he is not given fair transportation rates to reach his markets. There is no line of endeavor in which a man or woman can engage that is not dependent to a greater or less degree upon transportation rates.

The gentleman from Alabama [Mr. ABERCROMBIE] has referred to the thoroughness of the Germans. He has praised them for their methods, and has praised them very justly. They have given attention to vocational education and have not neglected the important subject of transportation and transportation charges. Germany's vast shipping business is done, it is said, on a tariff scarcely larger than a bill of fare.

In the United States, with an Interstate Commerce Commission costing the people $1,500,000 a year, the tariffs under which our shipping business is done cover several city blocks and could not be carried in a freight car. It is safe to say that there is not a member of the Interstate Commerce Committee of the Senate or the Interstate and Foreign Commerce Committee of the House who can read and interpret our freight tariffs, much less justify the "crazy-quilt" system of transportation rates under which we are compelled to try to do business.

The House Committee on Interstate and Foreign Commerce is composed of 21 lawyers. The members, though none of them is a shipper or a manufacturer, are accustomed to work out intricate problems in connection with our very complicated laws, and I am informed that all of them have been remarkably successful in this particular. Yet there is not one among them who can reconcile our present parcel-post rates, which have been given the rubber-stamp approval of the Interstate Commerce Commission, or interpret the intricate tariffs that our merchants, manufacturers, and other shippers must use. Even our learned President, than whom there has never been a more able and honest man at the head of our Government, does not pretend to comprehend present transportation conditions and knows nothing of the intricacies of our freight tariffs. In the very nature of things he can not personally take up such matters, but must leave them to the proper departments and bureaus. In this case we are compelled to look to the Interstate Commerce Commission for relief, and I regret to say, as I shall prove further on, that the Interstate Commerce Commission has failed to furnish the relief to which we are entitled.

It would be futile to try to point out any large percentage of the discrepancies and harmful discriminations that enter into this system of tariffs. The very fact of the complexity of the system is one of the strongest impeachments against it. When you have studied it for 25 years, as I have done, and discover new complaints to lodge against it almost every day, you will be as thoroughly convinced as I am that the system is indefensible. Recently the Interstate Commerce Commission has published rates for the express companies, which are contained in one comparatively small volume. I think the volume can be made much smaller and be all the better for it. Why, then, should the freight tariffs be so voluminous that it would require almost a lifetime to read them?

But let me give just an example or two, in passing, of the sort of rates contained in these tariffs. If the Capital Traction Co., which charges a 5-cent fare from the Capitol to Georgetown, should charge two fares for the passenger riding only as far as the Treasury—half the distance to Georgetown—you would pronounce the company a robber or its officials insane. Yet on goods from the Atlantic coast, such as carpets, boots, and shoes, Colorado pays 100 per cent higher freight rates than are charged on the same goods from the Atlantic seaboard to the Pacific coast, though they pass through Colorado en route and travel from 1,000 to 1,500 miles farther.

While participating recently in the dedication of the tallest building in the world—the Woolworth Building, in New York—I conceived the idea of calculating how much more it would cost to ship the material required in its construction from New York to Leadville, a city in the congressional district from which I was elected, than to ship it through Leadville to the Pacific coast, over 1,000 miles farther. I insert here a table showing the penalty that would have to be paid by the people of Leadville on a part of this material in the way of excess freight rates over the Pacific coast if those people desired to erect such a building in Leadville.

What it would cost to take materials in Woolworth Building from New York to San Francisco and from New York to Leadville, Colo.

	Pounds.	Freight rate to San Francisco.	Freight rate to Leadville	Penalty against Leadville.
Structural steel	48,000,000	$384,000	$528,000	$144,000
Terra cotta	60,000,000	450,000	579,000	129,000
Glass	640,000	5,760	7,680	1,920
Red lead	283,000	3,255	4,404	1,149
Wire and machinery	780,000	9,750	13,650	3,900
Machine tools	80,000	1,400	1,840	440
Electric fans, etc	200,000	3,200	3,860	660
Total	110,083,000	857,365	1,138,434	281,069

Tersely stated, here is the condition this table reveals:

From New York to San Francisco the distance is ____ miles ____ 3,148
From New York to Leadville the distance is ____ do ____ 2,192
From New York to San Francisco the total freight charge is ____ $857,365
From New York to Leadville the total freight charge is ____ $1,138,434

Distance to Leadville is 30.3 per cent less than to San Francisco.
Freight charge to Leadville is 32.8 per cent greater than to San Francisco.

This remarkable rate adjustment is charged to water competition to Pacific coast points. Here is another remarkable case of rates from the Atlantic seaboard to interior points west of the Mississippi River which is laid at the door of water competition:

The rate per 100 pounds, first class, from Fort Worth, Tex., to Clayton, N. Mex., is $1.71. The rate from Fort Worth to Omaha is $1.62, 9 cents lower, though the distance is about one-third greater. Now, on goods shipped from New York via Galveston through Fort Worth to Clayton the rate is $2.34. On the same goods shipped from New York via Galveston, also through Fort Worth, to Omaha the rate is $1.38, or 96 cents less.

Here is another way of stating the situation:

Fort Worth to Clayton	$1.71
Fort Worth to Omaha	1.62
Excess charge for shorter distance	.09
New York to Clayton via Galveston and Fort Worth	2.34
New York to Omaha via Galveston and Fort Worth	1.38
Excess charge for shorter distance	.96

Why should Clayton pay 9 cents higher rate from Fort Worth than Omaha, when the distance to Omaha is one-third farther? Certainly there is no good reason for such a discrepancy against Clayton. But there is little objection to this small discrepancy in goods that originate in Fort Worth. The real ground for complaint is on goods that originate in New York. Why should the rate from New York to Clayton via Galveston and Fort Worth be 96 cents higher than to Omaha, or more than ten times as much higher as on goods that originate in Fort Worth?

Here is an example of so-called market competition, showing commodity rates to Denver and Salt Lake City:

Books.

Chicago to Denver	$1.40
Denver to Salt Lake	1.54
Total combination on Denver	$2.94
Chicago to Omaha	$0.80
Omaha to Salt Lake	1.20
Total combination on Missouri River	2.00
Penalty for handling goods via Denver	.94

Oilcloth and linoleum.

Chicago to Denver	$1.00
Denver to Salt Lake	.96
Total combination on Denver	$1.96
Chicago to Omaha	$0.32
Omaha to Salt Lake	.80
Total combination on Missouri River	1.12
Penalty for handling goods via Denver	.84

Soap.

Chicago to Denver	$0.67
Denver to Salt Lake	.40
Total combination on Denver	$1.07
Chicago to Omaha	$0.27
Omaha to Salt Lake	.40
Total combination on Missouri River	.67
Penalty for handling goods via Denver	.40

Why should not the Chicago to Denver rate be the same as Chicago to Omaha if it is right to make rates from Omaha to Salt Lake the same as and lower than the rates from Denver to Salt Lake?

I present here a table of commodity rates, being carload and less-than-carload rates on boots and shoes, both leather and rubber, from Boston and New York to various western commercial centers, including Denver. I present these rates only as an example of the hundreds of commodity rates in effect to the points named, the relation between the rates to the various western cities being much the same in all cases. It will be seen that the lowest rates applying to Denver are higher than the lowest rates applying to any other city named, though El Paso, Salt Lake City, and San Francisco are all farther from New York or Boston than is Denver.

Rates per 100 pounds on boots and shoes.

BOSTON TO ST. LOUIS.

	Leather.		Rubber.	
	Less than carload.	Carload.	Less than carload.	Carload.
All rail	$0.88	$0.88	$0.88	$0.76
Sea and rail	.83	.83	.83	.72

BOSTON TO OMAHA.

All rail	$1.43	$1.43	$1.43	$1.31
Sea and rail	1.38	1.38	1.38	1.27

BOSTON TO DENVER.

All rail	$2.50	$2.50	$2.50	$2.38
Sea and rail	2.34	2.34	2.34	2.22

Rates per 100 pounds on boots and shoes—Continued.

BOSTON TO EL PASO.

	Leather.		Rubber.	
	Less than carload.	Carload.	Less than carload.	Carload.
All rail	$2.47	$2.47	$2.47	$2.35
Sea and rail	1.84	1.59	1.84	1.59

BOSTON TO SALT LAKE CITY.

All rail	$3.15	$3.15	$3.15	$2.40
Sea and rail	2.99	2.99	2.99	2.03

BOSTON TO SAN FRANCISCO.

Commodity rate	$2.75	$2.75	$2.00	$1.50

NEW YORK TO ST. LOUIS.

All rail	$0.88	$0.88	$0.88	$0.76
Sea and rail	.83	.83	.78	.68
Canal, lake, and rail	.58	.58	.58	.52

NEW YORK TO OMAHA.

All rail	$1.43	$1.43	$1.43	$1.31
Sea and rail	1.38	1.38	1.38	1.23
Canal, lake, and rail	1.13	1.13	1.13	1.07

NEW YORK TO EL PASO.

All rail	$2.47	$2.47	$2.47	$2.35
Sea and rail	1.84	1.44	1.84	1.44

NEW YORK TO DENVER.

All rail	$2.50	$2.50	$2.50	$2.38
Sea and rail	2.34	2.34	2.34	2.22

NEW YORK TO SALT LAKE CITY.

All rail	$3.15	$3.15	$3.15	$2.40
Sea and rail	2.99	2.99	2.99	2.03

I have calculated the ton-mile rate on these two commodities from Boston to all the western cities named. It will be seen by examination of the table inserted below that Denver is, as I have charged many times, the apex of rates. St. Louis, which has been favored by the Interstate Commerce Commission in being permitted to remain a basing point, having the through rates to points beyond equal to the local rate to St. Louis plus the local rate to destination, is here shown to have an exceptionally low ton-mile rate when its short distance from Boston, compared with the other cities named, is taken into consideration. It will be noticed that the ton-mile rate begins to decrease as the distance increases when Denver is passed, the lowest being to San Francisco:

Ton-mile rates, in mills, on boots and shoes, Boston.

To—	Leather.		Rubber.	
	Less than carload.	Carload.	Less than carload.	Carload.
St. Louis	13.49	13.49	13.49	11.62
Omaha	18.07	18.07	18.07	16.63
Denver	22.80	22.80	22.80	21.63
El Paso	15.24	13.17	15.24	13.17
Salt Lake City	22.90	22.90	22.90	15.84
San Francisco	16.60	16.60	12.07	9.05

Why should the rate on rubber boots and shoes be different from that on leather boots and shoes? It can not be argued that the commodity is less valuable and should therefore take a lower rate, else the same rate would not apply on less-than-carload shipments to every point named except San Francisco. But it will be noted that there are carload rates granted on rubber boots and shoes lower than are granted on leather boots and shoes to every point except El Paso. Even Denver, which is seldom given anything but the highest possible rates, gets a lower carload rate on rubber boots and shoes than on leather boots and shoes.

But look at the rates that apply to San Francisco. On rubber boots and shoes the ton-mile rate for less-than-carload ship-

ments is lower than for any other point in the list, even including St. Louis, while the carload rate is but 9 mills, one of the lowest rates applying any place in the country on any commodity that ordinarily takes first-class rates in less than carload lots.

What is the reason for such a rate adjustment as this? Can anybody explain it? Why is Denver given a higher rate on rubber boots and shoes than Salt Lake City, both being inland cities, and Salt Lake City being more than 500 miles farther from Boston than Denver?

It is just this sort of rate adjustment against Denver that I have been complaining against for more than 20 years. I have not satisfied myself with complaining, but have been fighting against it before the Interstate Commerce Commission almost continuously since 1892. Since that year, now more than 21 years, I have been constantly before the commission or in the courts in an effort to correct the discriminations that have been pointed out. The attention of the commission has been brought to this condition in commodity rates through a case brought by Denver shippers and we are hoping for an early adjustment of this one evil at any rate. But we have been hoping for it a long time. Will our hopes be realized?

We have had an Interstate Commerce Commission since 1887. From time to time the interstate-commerce act has been amended and strengthened so as to give the commission greater authority to regulate transportation rates and to give to all sections of the country equal commercial advantages so far as equitable transportation rates will effect that purpose. Yet it can be shown by comparison of the tariffs in effect to-day with those in force in 1887 that we are suffering in many cases worse discriminations than we suffered when the commission was created.

There is another matter I have complained of frequently, which the Interstate Commerce Commission and the railroads tell us they have been trying for a number of years to remedy. That is the matter of freight classification. Acting perhaps upon the theory that the tariffs would be too simple if freight were classified the same in all parts of the country the railroads have adopted three classifications—the official, southern, and western. Roughly, official classification territory is bounded on the south by the Ohio and Potomac Rivers and on the west by the Mississippi River to the northern boundary of Illinois, where the boundary line shifts eastward to Lake Michigan. Southern classification territory lies south of the Ohio and Potomac Rivers and east of the Mississippi River, and western classification territory lies west of the Mississippi River and includes that territory east of the Mississippi River lying north of the northern boundary of Illinois and west of Lake Michigan.

The railroads admit that there is no reason except to serve their purpose for this puerile system. The Interstate Commerce Commission admits that it should be changed. No doubt the Interstate and Foreign Commerce Committee of the House will agree that it should be changed. But why isn't it changed? A committee representing the railroads has been trying to work out a new system for several years. The Interstate Commerce Commission has occasionally threatened to take a hand if the railroads did not hurry up and remedy the evil. Occasionally one of the lawyers on the Interstate and Foreign Commerce Committee of the House has had a word to say about it when he found time; but, nevertheless, we have the threefold system with us to-day.

Perhaps there is a reason why the shippers in official classification territory would rather have the three classifications remain. I shall introduce a table further on in the course of my remarks which shows that official classification territory enjoys preferential rates, in many cases less than one-half the rates paid in western and southern classification. I challenge any member of the Interstate and Foreign Commerce Committee of the House or the Interstate Commerce Committee of the Senate to justify these rates.

I contend, and the contention is borne out by the facts, that all the education, vocational or otherwise, you can crowd into the minds of any people can not overcome such frightful transportation handicaps. Nothing can save the people of Colorado and the Rocky Mountain West from the baleful influences of these discriminations except the correction of the tariffs. Without fear of successful contradiction, I say that there is no State in the Union so lavishly endowed by nature with the gifts necessary to make it a great manufacturing State. Yet we have very little manufacturing compared with what we should have. Discriminatory freight rates is the reason. It was discriminatory freight rates in the main that were responsible for the loss to my own city of Denver of two woolen mills, paper mill, cotton mill, rolling mill, tannery, cooper shop, match factory, white-lead works, cement works, stove works, boiler works, medicine plant, tin-can factory, hardware factory, knitting factory, saddle factory, envelope factory, and several other factories.

Some years ago I published a little pamphlet in which I referred to Colorado as the "superlative State," and cited several examples in which Colorado surpasses all States. To-day it is still more the "superlative State" despite transportation handicaps. Colorado's climate is the finest in the world; her scenery is beyond comparison; her supply of high-grade coal is larger than that of any other State; her natural water power is sufficient almost to turn the wheels of the factories of the Nation; she has the largest and finest deposits of pure white marble in the world; she leads in the production of sugar beets; her potatoes, cantaloupes, peaches, and apples are the finest grown; she still leads all States in the combined production of gold and silver. There is no soil richer than Colorado soil, no climate more kindly and encouraging to the manifold crops she produces. Colorado is indeed the "superlative State."

Yet, with the handicap of discriminative freight rates, Colorado can never thrive as nature intended she should thrive. What profits it that the sun of heaven kisses Colorado's people and Colorado's products 300 days every year, and water from her snow-clad peaks moisten the roots of her crops at the will of the farmer, if the railroads persist in making Colorado the apex of high rates in every direction, the very climax of transportation discrimination?

I do not undertake to say that Colorado alone has been chosen by the railroads as the dumping ground for all unjust, unreasonable, and discriminatory freight rates that can not be unloaded on any other section of the country. The South does not get what it is entitled to, but it is the great Rocky Mountain region that is the particular prey of the transportation monopoly. I submit here a table which illustrates graphically the discriminations of which we complain:

2371.—St. Louis.

To— Postal unit.	To— Station.	Distance.	First-class freight rate.	Ton-mile rate.
		Miles.		*Mills.*
3138	Austin, Tex.	845	$1.47	34.79
3405	Bismarck, N. Dak.	1,021	1.63	31.92
464	Boston, Mass.	1,230	.94½	15.36
2115	Chicago, Ill.	284	.43⅓	30.49
1820	Cincinnati, Ohio.	341	.41	24.04
3819	Denver, Colo.	916	1.62	35.37
1664	Detroit, Mich.	488	.46	18.85
2555	Duluth, Minn.	728	.78	21.42
3085	El Paso, Tex.	1,245	1.59	25.54
1538	Jacksonville, Fla.	975	1.18	24.20
1727	Knoxville, Tenn.	589	1.09	38.94
3017	Lincoln, Nebr.	473	.65	27.48
2378	Memphis, Tenn.	311	.65	41.80
2877	Muskogee, Okla.	504	1.15	45.63
2986	New Orleans, La.	699	.90	25.75
767	New York, N. Y.	1,065	.87½	16.43
2916	Omaha, Nebr.	413	.60	29.05
1227	Raleigh, N. C.	939	1.26	26.27
1073	Richmond, Va.	918	.84½	18.40
4547	Salt Lake City, Utah.	1,450	2.27	31.31
5573	San Francisco, Cal.	2,199	3.30	30.01
2819	St. Joseph, Mo.	327	.69	36.69
962	Syracuse, N. Y.	879	.73½	16.72

The accompanying table should be studied in connection with a parcel-post map, on which the stations given may be located by use of the postal units. The three classification territories should be outlined according to the description I have previously given, for much of the significance of the table is found in comparison of the rates in the official territory with those in southern and western territory.

It will be noted that the ton-mile rate has been calculated in each case. Recently, in the petition filed by the Boston Chamber of Commerce to obtain lower through rates from the Atlantic seaboard to Colorado and Utah common points than the combination of rates on the Mississippi River and Chicago, it was contended by the petitioners that the rate per ton-mile shall decrease as the distance increases. In deciding this case the commission said with regard to this contention:

> The second reason urged by the complainants is that a fundamental maxim of rate making requires that the ton-mile rate shall decrease as the distance increases. This undoubtedly is a rate-making maxim which ordinarily is and ought to be applied where conditions admit. It is not, however, a rule of such universal or imperative application that every shipper is as a matter of right entitled to the benefit of it, nor can it be said that to disregard this rule creates of necessity a discrimination.

Let us examine our table to see where this well-established rule breaks down.

It will be noted that all the rates are calculated from St. Louis. This point is taken because it is near the center of the country, and, further, because it is at the point where the three classification territories come together. As a result, the rates out of St. Louis are seldom made up under two classifications, but are wholly official, southern, or western classification.

The ton-mile rate from St. Louis to Cincinnati is 24.04 mills; to New York, where the shipment may move by way of Cincinnati, being in the same general direction, the rate is 16.43 mills; and to Boston, still farther on in the same direction, the rate is 15.36 mills. It will be seen that the rule holds good in this case, where the points are all in official classification territory.

Now, take Knoxville, Tenn., Raleigh, N. C., and Jacksonville, Fla., three points in southern classification territory, whose distances from St. Louis are in the order they are named. Knoxville being the nearer. The ton-mile rates are: Knoxville, 38.99 mills; Raleigh, 26.27 mills; Jacksonville, 24.20 mills. It will be seen that the rule holds good here.

Take Memphis and New Orleans. The rate to Memphis figures 41.80 mills, an abnormally high rate. To New Orleans it is 25.75 mills, the same rule again holding good. By comparing the rates to Muskogee, Okla., Austin, Tex., and El Paso, Tex., it will be seen that the rule applies as elsewhere.

But it all changes when you ship to Denver, the queen city of the Plains, the metropolis of the Rocky Mountain region. Note that the rate to St. Joseph is 36.69 mills; to Lincoln it is 27.48 mills; but to Denver, nearly twice the distance to Lincoln, the ton-mile rate is 35.37 mills.

Now, look what happens when you pass Denver. The ton-mile rate to Salt Lake City is 31.31 mills. When you get to San Francisco the ton-mile rate is 30.01, but more than 90 per cent of the business to San Francisco moves under commodity rates, which are, on the average, about one-third as high as the class rates.

Here again we have an example of the application of the rule referred to in the Boston case. It applies before you reach Denver and begins to apply again as soon as you pass Colorado. It continues to apply clear on till you reach the Pacific coast. Why does it not apply in Colorado? In this connection I desire to

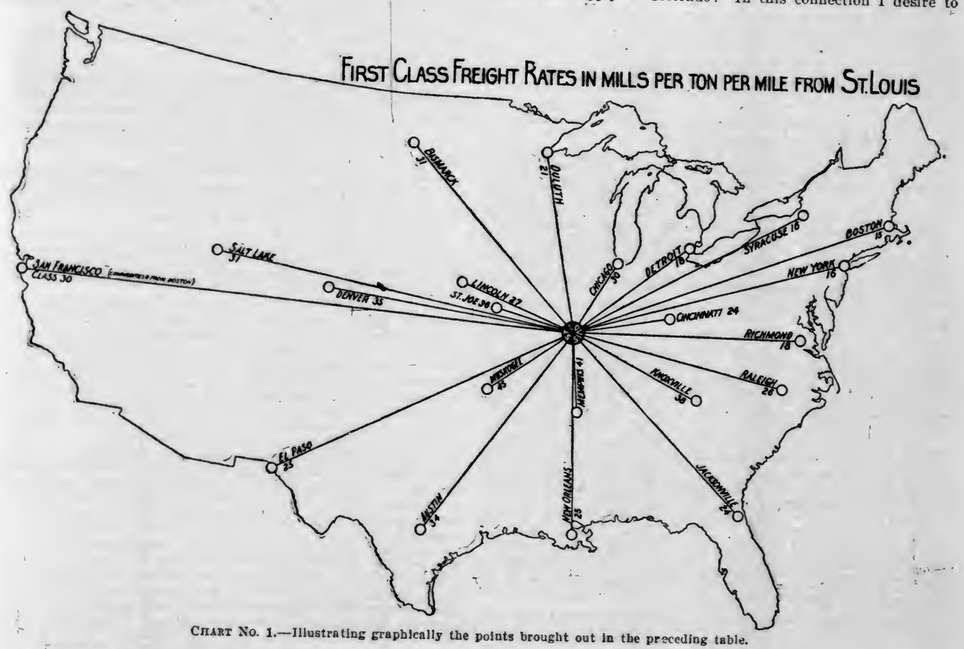

CHART No. 1.—Illustrating graphically the points brought out in the preceding table.

call attention to Chart No. 1, showing the ton-mile rates given in the table and showing relative distances and direction of the points from St. Louis. To avoid complexity as much as possible the ton-mile rates have been given without decimals. It will be found that the argument of the table is made much clearer by reference to the chart.

In the Boston Chamber of Commerce case the Interstate Commerce Commission refused to grant a through rate to Denver lower than the sum of the locals on Chicago and the Mississippi River. To have done so would have reduced the ton-mile rate to Denver. Why is it that the commission sees that the rule requiring that the ton-mile rate shall decrease as the distance increases is applied to practically all sections of the country except the Rocky Mountain West? Why are we beyond the one hundredth meridian denied commercial equality? Why does the Interstate Commerce Commission give the railroads license to rob us, on the pretext that the railroads must pay interest on their securities, one-half of which are based on water, yet permit the same railroads to make rates to the Pacific coast, right over our heads, one-half as high as our rates, and so low that the railroads lose money on the business?

I shall insert here a letter I received a short time ago from one of my constituents, a well-known Denver shipper, giving his views of the decision of the commission in the Boston Chamber of Commerce case and my reply thereto:

THE DANIELS & FISHER STORES CO.,
OFFICE OF THE SECRETARY,
Denver, Colo., September 20, 1913.

Hon. GEORGE J. KINDEL,
Congressman First District of Colorado, Washington, D. C.

MY DEAR MR. KINDEL: I to-day secured a copy of the decision by Commissioner Prouty relative to case No. 4805, opinion No. 2418, between the Boston Chamber of Commerce and the Santa Fe Railway. This decision was made June 9, 1913. It is self-explanatory, and is one of the oddest decisions I have ever seen. They practically admit, to my way of reading it, that the through rate should be less than the

combination of the locals; yet as it would upset things and be rather trying on the railroads to readjust their tariffs, they do not think it worth while to bother the railroads.

This is the sort of decision Denver has been receiving of late, and to my mind this one alone would give you a beautiful opportunity to bring to the notice of Congress the sort of deal Denver is getting. You are the one man who could do this and make it stick, and the way that the people of Denver are beginning to feel at the present time you would certainly strike the right chord.

* * * * * * *

Thank you again for the manly interest that you are taking in trying to right the wrong against Denver in the way of freight rates, the one thing that is holding the city back to-day; and if such raw decisions continue to be handed down to Denver from the Interstate Commerce Commission, it seems to me there is a day of reckoning coming.

Sincerely, yours, A. B. TROTT.

WASHINGTON, *September 24, 1913.*

MR. A. B. TROTT, *Denver, Colo.*

MY DEAR MR. TROTT: As I stated in my last letter to you, I was so busy with another matter at the time the Interstate Commerce Commission announced its decision in the Boston Chamber of Commerce case that I did not have the leisure to go into it minutely. I read it cursorily, noted that it was a very strange and apparently unjustifiable decision, and decided to take it up more in detail when I could find the opportunity.

Since last writing to you I have found that opportunity. In many respects I regard the opinion, after considering it carefully, as the most unreasonable and inexcusable that the commission has ever rendered.

The commission was asked to make through rates from Atlantic seaboard territory to Colorado and Utah common points lower than the combination of locals on Chicago and the Mississippi River. Here is what it says about the justice of such a rate adjustment:

"Ordinarily the through rate is and should be less than the sum of the intermediates, for the reason that the cost of the through movement is less, and the present instance is no exception to the rule.

"This (that the rate per ton-mile shall decrease as the distance increases) undoubtedly is a rate-making maxim which ordinarily is and ought to be applied where conditions admit.

"In the Burnham-Hanna-Munger case the commission established a rate from the Atlantic seaboard to the Missouri River less than the combination upon the Mississippi River. In the Nevada case rates were prescribed from the Atlantic seaboard to Reno and other Nevada points which were less than the Mississippi River combination. It appears, therefore, that there are now in existence tariffs upon both sides of these points in question which recognize the principle contended for by the complainants. There is certainly no good reason why, if this principle should be applied to the Missouri River and again to the Nevada points, it ought not also to be recognized in making rates to Colorado and Utah.

"On the whole, the complainants, we think, show a condition which ought to be corrected, if it can.

"They (the complainants) show an unnatural and unreasonable rate condition."

There is no reason given for refusal to grant the petition except that it will reduce the income of the carriers. The railroads make the defense that the cost of transfer on a through shipment at Chicago or St. Louis is actually greater than the cost of delivering the goods to a consignee at either of those points and receiving them again from a new consignor. The commission holds that this contention is not proved. Yet the commission, after stating in language of half a dozen varieties that the reduction in rates asked for should be granted, states finally "We are of the opinion that no action should be taken at this time."

It will be recalled that the commission did not consider loss of revenue to the railroads a sufficient argument to prevent its ordering rates from the Atlantic seaboard to the Missouri River lower than the combination upon the Mississippi River. Neither did the commission consider loss of revenue to the carriers an argument weighty enough to dissuade it from ordering rates from the Atlantic seaboard to Nevada points lower than the combination on the Mississippi River.

And it will be long remembered by the people of Denver that the commission did not consider loss of revenue to the railroads a sufficient argument to prevent its ordering rates from Chicago and the Mississippi and Missouri Rivers to Salt Lake City and Utah common points far lower than the combinations upon Denver. The commission makes a point of the fact that it established the rates now in effect from Chicago and the Mississippi River to Colorado and Utah common points. It also made the rates from the Missouri River to Denver and Utah common points.

And look what it has done to Denver in establishing those rates. The through rate, first class, from Chicago to Salt Lake City is 89 cents lower than the combination on Denver. Denver also pays a penalty of 80 cents over the Mississippi River for a reload on a first-class shipment of 100 pounds to Utah common points. The combination of rates on Denver from the Missouri River to Salt Lake City is 79 cents higher than the through rate.

When does the commission believe it should make the through rate less than the sum of the locals? Obviously, when to do so would be of no benefit to Denver and might work hardship to the commercial interests of Denver. When does the commission believe it should refuse to grant a through rate less than the sum of the locals? Just as obviously, likewise, when to make such a rate might result in some advantage to the business interests of Denver. It is difficult to arrive at any other conclusion after considering the rulings of the commission on rates that affect Denver in the past five years.

Let us return just a moment to the contention of the railroads that it would result in loss of revenue to them to grant the petition of the plaintiffs. That reminds me of a conversation I had with Commissioner Harlan a few days ago. I was protesting against the raw deals Colorado has been receiving from the commission for a great many years.

"Well, we have kept the railroads running, haven't we?" he said.

"You certainly have kept the railroads running," I replied, "but look what you have done to Colorado."

I feel like repeating my end of that conversation every time I see a member of the commission.

Look for just a minute at some of the rates now in effect, most of which the commission itself fixed. The through rate from New York to Salt Lake City is $3.15. The rate is exactly the same if the goods are shipped first to the Mississippi River, unloaded, reloaded, and then shipped on to Salt Lake City. When the goods are reloaded the rate is made up as follows:

New York to Mississippi River	$0.88
Mississippi River to Salt Lake	2.27
Total	3.15

But look what happens when the goods are reloaded in Denver:

New York to Denver	$2.50
Denver to Salt Lake	1.54
Total	4.04

Now compare the two rates—one where the goods are reloaded at the Mississippi River and the other where they are reloaded at Denver:

New York to Mississippi River to Salt Lake	$3.15
New York to Denver to Salt Lake	4.04
Penalty against Denver	.89

The commission has refused to consider the claim of the railroads that it costs more to handle through business by way of the St. Louis terminals than it costs to deliver it to a consignee there and receive it from a new consignor. It contends that the through rate should be less than the sum of the locals if conditions will permit. What conditions are there, in the name of all that is fair and decent, that would justify the commission in maintaining an 80-cent reload charge against Denver and no reload charge against St. Louis?

I have decided to visit Denver about the middle of next week. I will have an opportunity then to talk freight rates with you in detail.

Sincerely, yours,

GEO. J. KINDEL.

Only gigantic trusts like the Colorado Fuel & Iron Co., the Standard Oil Co., the Sugar Trust, the Beef Trust, and similar organizations are given preferential and differential rates to Colorado points as low as 75 per cent of the Chicago rate to Pacific coast points. Smaller institutions are not even allowed relative rates for the much less distance.

Judge Prouty, a recognized pillar of the Interstate Commerce Commission, has long since admitted the fact that freight-rate discrimination is one of the most potent factors in the formation of monopoly. He puts it in this language:

Freight-rate discriminations are the most potent factors in the establishment and continuance of great combinations of capital at the present time. It may be doubted if a single one of those monopolies which have fastened themselves upon the country in recent years could have done so in the face of absolute equality in the freight rates.

Yet the recent action of the Interstate Commerce Commission, to which Judge Prouty was a party, in indorsing without investigation the indefensible parcel-post graduate that was submitted by the four assistants to the Assistant Postmasters General, and again when he announced the decision of the commission in the recent Boston to Denver rate case, legalizing the arbitrary and imaginary line at Chicago and St. Louis, which gives the mail-order and other houses there an advantage of from 50 to 90 cents per 100 pounds over Colorado points, is inexplicable in the light of the language quoted.

The factors of transportation and rules of equity that govern transportation in the progressive European countries are often ignored and despised by our Government, railroads, and express companies. Bulk, value, insurance, distance, and dispatch should constitute the basis of equitable and progressive transportation.

Fair transportation, like free circulation, means life; discriminative transportation, like impeded circulation, means death.

We are at last coming to realize that the Post Office Department, through the parcel post, is to become one of the truly great transportation agencies of the country. Since the Government can not long exist except through giving equal rights and advantages to all it is peculiarly necessary that the transportation rates adopted by the Government should be fair, equitable, and as nearly as possible scientific. The Government, through the Interstate Commerce Commission, will be in a weak position in its efforts to regulate the rates charged by the railroads if the Government's own transportation rates are improperly adjusted.

But there is no railroad in the country that would for a minute think of establishing so unscientific, unrelated, and utterly silly a system of rates as is now in effect for the transportation of parcel post. Yet this foolish rate system has the rubber-stamp approval of the Interstate Commerce Commission, an approval given without investigation, and amounting to no more than if some office boy employed by the commission had signed to it the names of each member of the commission with a rubber stamp.

I insert here another table which illustrates something of my complaint against our parcel-post rates, prepared by four assistants to the Assistant Postmasters General, and given the rubber-stamp approval of the Interstate Commerce Commission:

767. NEW YORK NO. 1.

150-mile radius.			300-mile radius.		
Postal unit.	Station.	Freight rate.	Postal unit.	Station.	Freight rate.
620	Dover, Del	$0.34	1213	Buffalo, N. Y	$0.39
613	Greenfield, Mass	.30	1318	Greensburg, Pa	.45
565	Towanda, Pa	.35	361	Portland, Me	.40
			1073	Richmond, Va	.37

1820. CINCINNATI NO. 2.

1973	Hardinsburg, Ky	$0.65	1878	Chattanooga, Tenn	$0.70

3349	Uvalde, Tex	.71	3586	Odessa, Tex	.96
			2734	Shreveport, La	1.05

[1] No railroad.

This table will also be best understood if studied in connection with a parcel-post map, on which the various stations can be located readily by reference to the postal units. As an illustration, take the first of the eight groups given. With New York as a center two circles, the first with a radius of 150 miles and the second with a radius of 300 miles, may be drawn for convenience in studying. It will be found that the three cities in the column marked "150-mile radius" fall on or near the smaller circle, while those in the "300-mile-radius" column fall on or near the larger circle. The same is true of all the groups.

Chart No. 3, though it does not contain the postal units, is drawn as suggested above, and shows the relative position of the various cities referred to.

To cities in the first column the parcel-post rate from the central city in each case is 24 cents for 20 pounds, the maximum weight, or 15 cents for 11 pounds. In five packages 100 pounds can be shipped to the cities in this column from their respective central cities for $1.20.

But it is very different in the case of the cities in the second column. Eleven pounds is the largest package that can be shipped to them by parcel post from their respective central cities, and the rate is 57 cents. A shipment of 100 pounds can be made only in 10 packages and the cost is $5.20. Twenty pounds can be shipped only in two packages and the cost is $1.04, as compared with 24 cents for the cities in the first column.

Is there not need for a little vocational study of parcel post in this country? Would the people accept a parcel-post system so manifestly unscientific and discriminatory if they understood it? And would the Post Office Department have adopted such rates as it did had the heads of the department studied transportation conditions in all parts of the country? Or would the Interstate Commerce Commission have given its rubber-stamp approval if it had thought the people would understand what was being done?

I have been fighting in season and out of season for more than 21 years for fair freight rates for the Rocky Mountain West. In all that time I have complained on only one or two occasions of too low rates. But it appears to me that Uncle Sam is not going to get rich on the parcel-post business in the Rocky Mountain West with the low rates his Postmaster General has established, if the people make such use of it as I am informed they are beginning to make. By reference to the table it may be seen that the Postal Department will transport 100 pounds, in five packages, from Helena to Salmon, Idaho, and deliver them all to consignees there for $1.20, since Salmon falls within the 150-mile radius from Helena. But note that it costs $1.71 to transport 100 pounds by freight from Helena to Salmon, though the goods are handled less expensively and are not delivered.

If the United States postal service, which carries a letter from the Atlantic to the Pacific for 2 cents, should adopt a rule that the rate should be 4 cents when the letter went straight through, but only 2 cents if it were addressed to Denver, halfway, and then readdressed to San Francisco, you would call such action idiotic and unjust. Yet that is in principle just what the postal service is doing under the new parcel post recommended by Postmaster General Burleson, approved by the Interstate Commerce Commission, and put into effect August 15, though the attention of the Postmaster General and the commission was called to the utter folly of the rates, weights, and zones proposed. The following figures will illustrate the point I make:

	Cents.
Rate on 11 pounds, 150 miles	15
Rate on 11 pounds, 300 miles	57
Rate on 11 pounds, 300 miles, reshipped once	30
Saving over through shipment	27

The Interstate Commerce Commission, until it gave permission for the new parcel-post rates to be put into effect, had been consistent in at least one thing. It had maintained always that

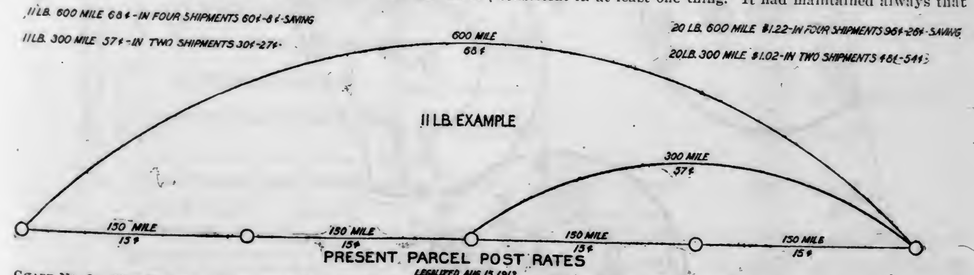

CHART NO. 2.—Showing how, by reshipping an 11-pound package from one to three times, the sender can obtain a lower rate than by shipping it straight through to destination.

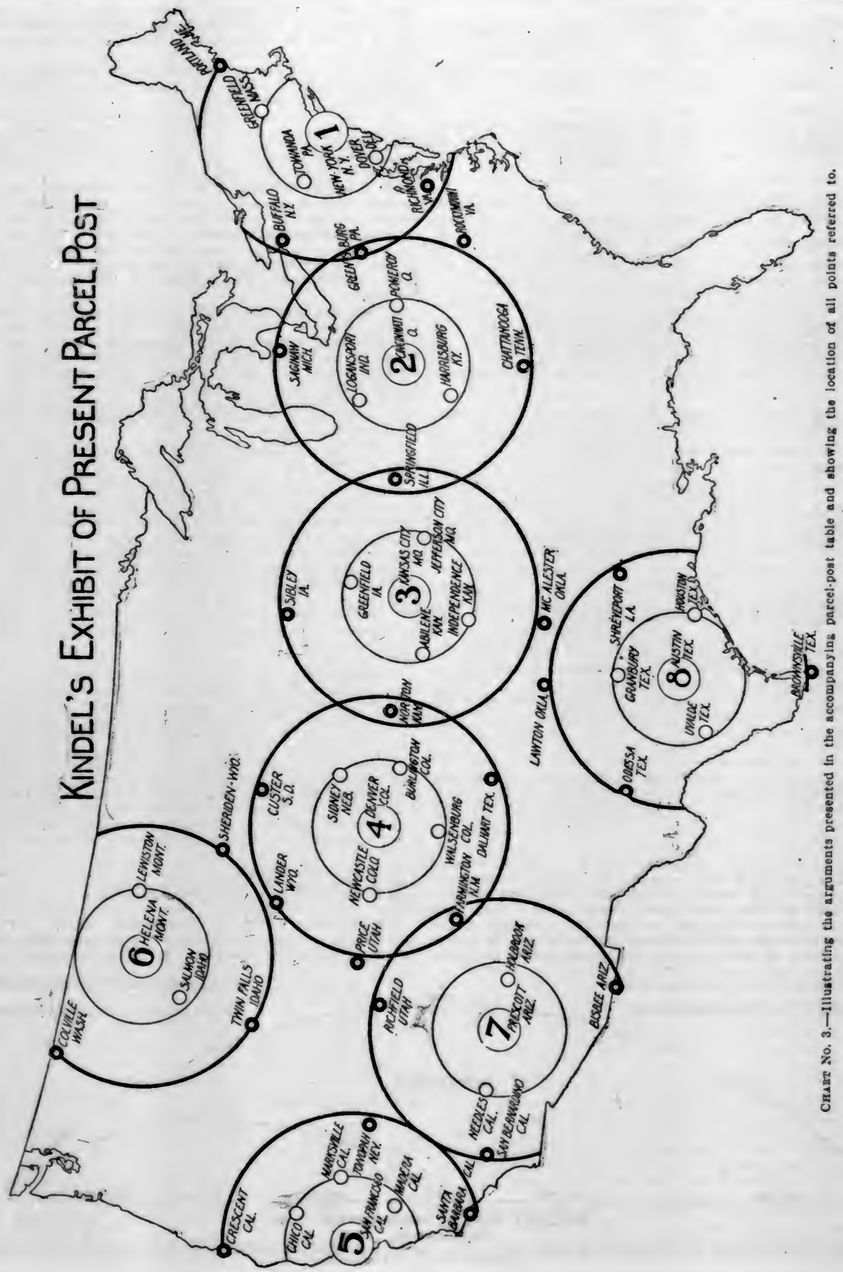

CHART No. 3.—Illustrating the arguments presented in the accompanying parcel-post table and showing the location of all points referred to.

the through rate should not be more than the sum of the local rates. By so doing it had refused always to sanction any rate arrangement where goods could be shipped and reshipped under local rates the combination of which would be less than the through rate between the point of origin and destination of the shipment.

But in sanctioning the new parcel-post rates it upset one of the best-established rate-making principles. It sanctioned a rate system where goods may be reshipped three times, and still the sum of the original rate and the three rates for reshipping will be less than the through rate.

Chart No. 2 shows graphically the point brought out above. The through rate, which the Interstate Commerce Commission has held should where possible be lower than the sum of the locals, is here shown to be actually greater than the sum of the locals.

My study has convinced me that the local rate as it has been made by the four assistants to the Assistant Postmasters General and given the rubber-stamp approval of the Interstate Commerce Commission is made with especial attention to the needs of the great department stores, mail-order houses, and express companies, which are well able to take care of themselves. They are using it to make their deliveries, putting the cost of this service on Uncle Sam. The first and second zone rates are especially suited to the great mail-order houses, which may transport goods in bulk to distributing houses established in various sections of the country, break the bulk, and distribute by parcel post to all territory within the 150-mile radius.

But why burden the record with further examples of official ignorance of the transportation question? Undoubtedly there is need for vocational education on that subject, to the end that future public officials whose duties demand knowledge of transportation shall understand it better than do many present officials with similar duties.

Parcel-post rates are just the same all over the country. Uncle Sam is no respecter of persons, at least so far as the parcel post is concerned. He does not favor any section of the country to the detriment of any other section, as do the railroads and the Interstate Commerce Commission.

But look at the freight rates. Remember that the distances from the central cities to the places named in the first column are approximately the same in each group as are the distances to places named in the second column. Why, then, is the rate from New York to Greenfield, Mass., 30 cents per 100 pounds first class, while the rate from Denver to Newcastle is $1.40? Why is the rate from San Francisco to Chico, Cal., 47 cents, while the rate from Prescott to Needles, Cal., is $1.28? Why is the rate from Cincinnati to Springfield, Ill., 41 cents, while the rate from Denver to Price, Utah, is $1.54? Why is the rate from Kansas City to Norton, Kans., 49 cents, while the rate from Denver to Norton is $1.18? Norton is just halfway between Denver and Kansas City.

These are but a few of the discrepancies and not the most flagrant ones, as you will note by consulting the table. By reference to a railroad map you will be able to discover a partial reason for some of them, as, for example, the high rate from Prescott to Farmington, N. Mex., where the route is very circuitous, or from Denver to Farmington, where goods must be transferred from standard-gauge to narrow-gauge cars and back again to standard-gauge cars en route. But I challenge anybody to offer an explanation that really explains the Denver, Helena, and Prescott rates.

I would advise all advocates of vocational education to make careful study of this table, referring freely to postal and railroad maps. I think those so studying it will be convinced before they have puzzled many hours over the discrepancies and discriminations it reveals that there is serious need for vocational study of transportation rates in this country. No doubt we are very poor farmers when we compare ourselves with the Germans, who are experts. Certainly we are inefficient in some lines of manufacturing when we compare our methods with those of some of our more-practiced European rivals. But I venture the assertion that no other nation which makes any pretension to commercial excellence would tolerate for a year so ill-adjusted and discriminatory a system of transportation rates as we have permitted to be established through the machinations of the railroads and the quiescence of State legislatures, Congress, and the Interstate Commerce Commission.

The gentleman from Maryland [Mr. LEWIS] on the floor of this House recently belabored Senator BRYAN and myself for criticizing the Postmaster General and his assistants. He did not dare to criticize the remedial graduate and zones I had offered, nor could he deny the charges I made against his illogical and inconsistent graduate and misstated comparison of European parcel-post rates. Why did the gentleman from Maryland stop at the tenth zone with his parcel-post rate exhibit of one-half cent per pound per 100-mile zone? Why was this graduate adopted only in part? Why did the Post Office Department not adopt the entire Lewis scheme? We of the trans-Mississippi West would prefer the adoption of Mr. LEWIS's entire 10 zones to any other offered to date. I dare the administration to adopt it. Under Mr. LEWIS's rate, zone, and weight scheme the West would blossom commercially as the proverbial rose. It would solve our present terrible transportation handicaps with one stroke. It would put us on the map and out of reach of eastern competition.

I have prepared a chart, here called Chart No. 4, which shows still further reasons why I have objected to the schedule of rates adopted by the Postmaster General and, with the rubber-stamp approval of the Interstate Commerce Commission, put into effect August 15.

The first increase, from the local to the first zone, is 9 cents. There is no increase between the first and second zones, the new schedule providing a flat rate for the first and second zones. The shock comes when we jump from second to third zone. Why is there an increase of 78 cents, or nearly nine times as much as the increase between the local and first zone? Stated differently, one can ship 20 pounds under this system a distance of 150 miles for 24 cents; but to ship the same package 151 miles it would cost $1.02, or 78 cents more. Why?

Now, note how the increase varies between the zones in the remainder of the schedule. Note, too, that the zones are each 400 miles in length beginning with the fifth. I offer a reward

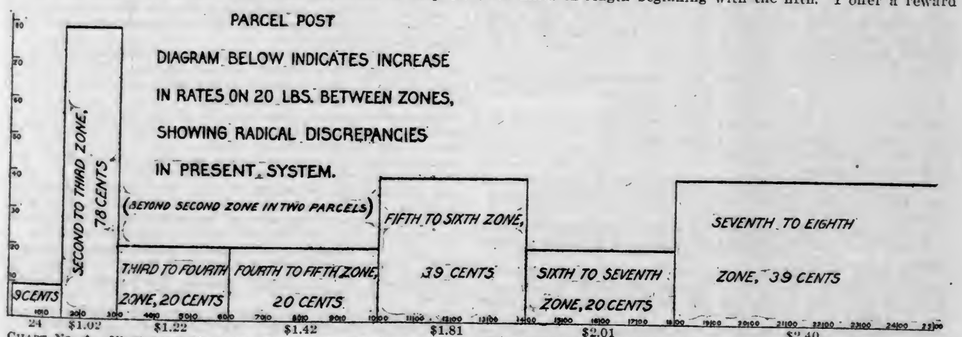

CHART No. 4.—Illustrating discrepancies in present parcel-post system. Figures below the chart give rates on 20 pounds in the various zones. They are not obtained by doubling the rates for 10 pounds, but are calculated on the same basis as the rates in the present schedule are calculated up to 11 pounds.

of $100 to anyone who can reconcile these discrepancies to the satisfaction of President Wilson.

We of the one hundred and fifth meridian, who are not seeking for patronage or honors but only for a square deal, can not understand why we are treated in manifestly stepchild fashion. In the House there are 57 committees, like Heinz's "57 varieties." Not a single chairmanship has been allotted to Members of the House west of the one hundredth meridian. On the important committees—such as Ways and Means, Appropriations, Agriculture, Interstate and Foreign Commerce, Foreign Affairs, Post Office and Post Roads—not one Democratic Member west of the one hundredth meridian has been placed. I was consigned to the District of Columbia Committee, which assignment I refused. I could not afford to be diverted from my predetermined purpose of acquiring commercial equality—a square deal for my section of the country—by being hamstrung or bottled up on a committee with which I am not in sympathy.

Lest we forget just how this parcel-post graduate, prepared by the four assistants to the Assistant Postmasters General, with the aid of the gentleman from Maryland [Mr. LEWIS], was given the rubber-stamp approval of the Interstate Commerce Commission, I shall insert it here.

The following table shows the parcel-post rates as they are since August 15 last. The discrepancies between the rates in the second and third zones should be noted, as well as the discrepancies that would exist on larger weights if they were permitted under the system beyond the second zone.

Present parcel post graduate.

Pounds.	Local zone.	First zone, 50 miles.	Second zone, 50 to 150 miles.	Third zone, 150 to 300 miles.	Fourth zone, 300 to 600 miles.	Fifth zone, 600 to 1,000 miles.	Sixth zone, 1,000 to 1,400 miles.	Seventh zone, 1,400 to 1,800 miles.	Eighth zone, 1,800 miles and over.
1	$0.05	$0.05	$0.05	$0.07	$0.08	$0.09	$0.10	$0.11	$0.12

19	.14	.23	.23	.....	.....	.....	.....	.....	.....
20	.15	.24	.24	.....	.....	.....	.....	.....	.....

Why 20-pound instead of 25-pound limit? Because, forsooth, the United States Post Office was possessed of 42,000 second-hand scales, which originally cost 90 cents each and which are only capable of weighing 20 pounds. One hundred dollars reward to anyone who can reconcile this "crazy-quilt" graduate to the satisfaction of the President.

Here are some of the reforms and improvements that we believe should be made in the parcel-post system and schedules, in addition to a simple and automatic graduate:

A zone system that covers the entire country, avoiding the flat rates that occur under the present system.

A zone adjustment that insures the same rate in each direction between points.

A rate graduate which provides declension of rates; that is, that the rate per ton-mile shall decrease as the distance increases.

A graduate rate for fractions of a pound. At present an ounce attached to a pound pays the pound rate. A 17-ounce package takes the 2-pound rate.

A graduate of insurance rates, the rate increasing regularly as the value of the goods to be insured increases. I have suggested a charge of 2 cents for $10 and an increase of 2 cents for each $10 in value.

The system should under no circumstances permit of reshipping under a combination rate less than the through rate.

The weight limit should be increased to at least 25 pounds and ultimately to 100 pounds.

The size of the package permitted to be shipped should be increased with increase in weight. Size of the package should be graduated with a definite cubic-weight rule.

Third-class matter should be abolished, and articles now included in third class should take parcel-post rates.

It will be suggested that the Postmaster General, with the consent of the Interstate Commerce Commission, is authorized to make the changes proposed. In reply I will state that I have called the attention of both the Postmaster General and the commission to the alterations needed. An old saying runs, "You can lead a horse to water, but you can not make him drink." Perhaps it might be wise for Congress to revoke the authority given the Postmaster General and the commission and set about making the necessary improvements itself.

For the purpose of comparison I will insert here the parcel-post graduate I have prepared and submitted to Postmaster General Burleson.

Proposed Kindel graduate.

SIMPLE, AUTOMATIC, AND EQUITABLE.

Pounds.	Local zone.	First zone, 50 miles.	Second zone, 50 to 150 miles.	Third zone, 150 to 300 miles.	Fourth zone, 300 to 500 miles.	Fifth zone, 500 to 800 miles.	Sixth zone, 800 to 1,200 miles.	Seventh zone, 1,200 to 1,700 miles.	Eighth zone, 1,700 to 2,200 miles.	Ninth zone, 2,200 miles and over.

GEORGE J. KINDEL'S copyrighted graduate of parcel-post rates and zones, which he presents to the people of the United States.
[The system admits of extension to any weight.]

The rate is found by multiplying the pounds by the zone and adding 3, the overhead charge, except in the local zone, where the rate is found by dividing the weight in pounds by 2 and adding 3. Thus the rate on 10 pounds in the local zone is 10÷2=5+3=8. Fractions are disregarded. The rate on 10 pounds to the eighth zone is 10×8=80+3=83. If it is found necessary to reduce rates, cut off the highest rate zone and spread the remainder.

Our section of the country, the trans-Mississippi West, is the recognized bread basket of the Nation. We demand a square deal; a 2-cent postage stamp instead of a 4; relative if not differential transportation rates.

Interstate-commerce laws now in effect are, in my opinion, contrary to the Constitution, as they discriminate between States. The Constitution provides:

No preference shall be given by any regulation of commerce or revenue to the ports of one State over those of another.

This square deal is pledged to us in the Democratic national platform. What the people of Colorado demand in this direction at the hands of the national Democracy is set forth in the following plank in the Colorado State Democratic platform:

We favor the opening of the Galveston gateway and equalizing of freight, passenger, and Pullman rates, and that all rates be made "between," instead of "to" and "from," in order to facilitate the development of our inexhaustible resources and materially reduce the high cost of living.

The voters of my State, believing we meant what we professed before election, sent a full Democratic representation to both Houses of Congress by an overwhelming plurality.

Yet all these things I have pointed out have happened to us in Colorado in this good year of our Lord 1913, with an Interstate Commerce Commission since 1887, under a Democratic administration, which pledged an equal opportunity, commercial and otherwise, to all. Why should we longer celebrate the Fourth of July in this boasted "land of the free"? Why wave the Star-Spangled Banner, that emblem of a square deal and equal rights to all men and all sections of our country, when we of the Rocky Mountain section are not given a square deal and are denied commercial equality?

Shall we, then, longer submit to the abuse of the Constitution, which was originally ample for the purpose, or shall we insist upon such equitable adjustments as shall give to all sections of our country an equal advantage?

We of the trans-Mississippi section protest against being compelled longer to furnish fodder for Senator TILLMAN'S allegorical cow, only to provide good milking for the railroads and money sharks of Wall Street. (See the cow, Appendix 2.)

We have been unable to get the square deal to which we are entitled at the hands of the Republican Party. The Democratic Party has pledged us that square deal, and we believe that pledge will be made good. It was largely because of the pledge of the Democratic Party in Colorado to fight to the last ditch for a square deal for commercial equality for the State that the party was successful in the last election. We assisted to some degree in that success. Now, if justice is denied us here, if the national Democracy does not take cognizance of our pledge in the Colorado State platform, we shall be compelled to carry on the battle in such manner as seems to us most certain to insure success, and, like our insurgent forefathers of seventy-six, to continue the fight for commercial equality for Colorado regardless of party affiliations.

It ill becomes us to assume the management of the parlors of the Philippines, Panama, and Cuba while we indulge at home so disgracefully neglected a kitchen.

Why not change the old cry of "Cuba libre" to "Colorado libre"?

Protection of Our Food Fish.

EXTENSION OF REMARKS

OF

HON. J. CHARLES LINTHICUM,

OF MARYLAND,

IN THE HOUSE OF REPRESENTATIVES,

Friday, October 17, 1913.

The House granted Mr. LINTHICUM leave to extend his remarks in the RECORD on the bills H. R. 7774 and H. R. 7775, relating to the conservation of our food fish.

Mr. LINTHICUM. Mr. Speaker, we Americans are an extravagant people, although our forefathers, who came to this country in its early days, were not. They came from European States crowded with dense populations whose natural wealth had been divested by centuries of civilization. The watchword of living had been economy, so it was inborn with them to be frugal with the riches of the new land. Their offspring, however, had no such object lesson or salutary experiences to restrain them, for the possessions to which they were born were so bountiful, so manifest on every hand, that they naturally assumed them to be unlimited.

Indeed, in the early part of the eighteenth century the North American Continent presented a vision of natural wealth that taxed the imagination and staggered the eye. People counted land not by acres, but by square miles; they measured wood not by cords, but by acres. They saw wild birds so numerous that they darkened the heavens; the forest game was so bold that they were compelled to destroy it in order to protect their gardens. The rivers teemed with fish in such numbers that the favorite diversion of Izak Walton was nothing more than the mechanical act of casting the line and drawing the catch. Great bodies of valuable ores lay unsought in the ground over which they trod, while watercourses and waterfalls, the future economic value of which they never dreamed, abounded on every hand.

It is not remarkable, therefore, that in the face of such dazzling opulence the descendants of these early settlers should have been extravagant with the great natural assets to which they were heir. It would have been more remarkable had they been otherwise.

Two centuries of practically unrestrained attack by civilization upon the magnificent natural resources of the North American Continent has brought us face to face with the consequences of our profligacy. Our public forests have been nearly destroyed, our lands despoiled of their richness, our game almost exterminated, while our ore bodies and waterfalls, which by their very nature could not be obliterated by the ruthless onslaught of our extravagance, have to a great extent passed under control of private corporations.

But no sooner did we awaken to our folly than the cry went up to "save what's left." Large areas of our forest domain were withdrawn from entry, ore lands were removed from the danger of private aggrandizement, concerted action was taken by the various States to save the remaining wild life, followed after a number of years by national legislation on the subject which has given to the birds more effective protection than any they have hitherto enjoyed.

We have paid a bitter price, but the lesson we have learned has been a valuable one, for now we appreciate from a practical viewpoint the worth of restraint and conservation.

It is strange, however, that though we have begun to protect and conserve our forests, our mines, our streams, our waterfalls, and our birds, we have so far ignored the importance of effectually protecting through national legislation our food fish. As an economic factor in the cost of living fish are of as much importance to the majority of our people as the birds; and in habits they are equally as migratory.

DECREASE OF OUR FOOD FISH.

Year after year our National Bureau of Fisheries has directed attention to the steady decrease in the catch of food fish, pointing out the abuses that existed and urging upon the various States the importance of enacting laws to remedy these abuses. It seems that these warnings have been generally ignored, and now we are reaping the consequences of our wastefulness. As an object lesson of the enormous decrease of food fish in our bays and rivers, consider the case of Neitzey Bros., of Washington, D. C., handling a seine 7,200 feet long, which requires 45 men and 2 steamers to operate it, who report to the Bureau of Fisheries that their entire catch for the two seasons of 1912 and 1913 did not equal more than one day's catch in former years.

One of the most valuable assets of my beloved State of Maryland is the beautiful Chesapeake Bay. Upon this bay thousands of Marylanders make their living navigating its waters, gathering its sea food, and capturing its wild game. The fishing industry is a business of great importance on this bay, and I am sure that no other State watches more carefully or guards more jealously their great natural assets than do the people of my State.

Many months ago Hon. Peter J. Campbell, of Baltimore, my former associate in the State Senate of Maryland, who has done so much for the protection of the fishing industry of our State in certain localities, finding the necessity for wider legislation, directed my attention to the constant depletion in the supply of the food fish in our rivers and bays, and I became interested in the subject.

The fisherman, like the farmer, has his good years and his bad years, his years of plenty and his years of scarcity. When years of scarcity occur at irregular or remote intervals they indicate no serious or permanent trouble, for any one of a dozen different causes may have conspired to keep the fish out of those particular waters in which the fisherman operates for a living. But when year after year his catch steadily and unfailingly diminishes, this decline indicates beyond any reasonable doubt the presence of agencies destructive to the fish beyond his normal rate of reproduction to overcome. Then it is merely a question of time when fish become extinct in those waters.

NEED FOR NATIONAL LEGISLATION.

I found that Maryland and Virginia had many good laws on their statute books, but that for some reason these laws were not always enforced. Being a Marylander, quite naturally my views at first were those from a Maryland viewpoint, but after I went further into the subject I found that a view from the Maryland standpoint was just about as correct or as wrong as a view from the Virginia standpoint. I then became aware that neither the Maryland viewpoint nor the Virginia viewpoint covered the whole of the situation, and that what was needed was legislation framed from a national viewpoint.

I understand the same situation was faced by those gentlemen who drafted the law for the protection of our migratory birds. Almost every State had protective laws of some kind, but in nearly every case those laws had been drawn in the interests of the hunters of the State and not in the interests of the birds. Those men discovered that what was needed was a law drawn from a national standpoint, that would afford the birds protection in their migrations through every State, and thus enable them to increase. And so I discovered soon after

taking up this fish question that what was required was legislation from a national viewpoint to protect the fish.

I had not proceeded far with my investigation when I became aware that the depletion of our fish could be traced to two principal causes:

First. The deliberate sacrifice of good food fish by the fertilizer factories in the manufacture of oil or fertilizer compounds; and

Second. The lack of regulations as to the time, manner, and conditions under which fish are taken.

I have therefore sought to remedy these abuses by the introduction of two bills.

H. R. 7774.

The first, H. R. 7774, seeks to regulate the interstate transportation of fish or products or compounds thereof when intended to be used for fertilizer or oil or in the manufacture of fertilizer or oil.

Now, the fish-fertilizer factories contend that they do not deliberately catch any fish other than the menhaden, because the menhaden is the ideal fish for their particular purposes. The bill which I have drawn, as you will note by reference to the same, excepts the menhaden, which in some localities is also known as the pogie or fatback or mossbunker. It places no restraint upon their unlimited use of the menhaden. It also permits them to use sharks, dogfish, skates, rays, sea robins, and sculpins, so it can not be said that this measure is inimical to or would inflict hardship upon the fish-fertilizer factories, because the men controlling those factories violently protest that the fish they principally use are the menhaden.

There are many industries, such as those engaged in the canning of salmon and fish roe, that use some particular part of the fish and regard the balance as refuse. Under an exception in my bill this refuse may be disposed of to the fish-fertilizer factories, and these factories would be guilty of nothing unlawful in using this by-product in the manufacture of fertilizer. The bill merely seeks to discourage the deliberate use of food fish for fertilizer by prohibiting the shipping of such fertilizer in interstate commerce.

In order to give to the Department of Commerce, which would have charge of the administration of this law, a convenient means by which to enforce the same, my bill provides that every interstate shipment of fertilizer or oil shall bear a label certifying that such shipment contains no fish except such as are permitted under this act.

PENALTIES.

It also provides that anyone who falsely labels any such shipment shall be fined not more than $200 or be imprisoned not exceeding one year for the first offense, and if again found guilty, be fined $500 or suffer imprisonment not exceeding three years, or both, in the discretion of the court. The Secretary of Commerce is authorized to make such regulations as he may deem necessary in carrying out the provisions of the act, and it is specifically stated that in order not to interfere with those industries which have been established in the Territory of Alaska, they shall not fall within the provisions of this bill until the last day of January, 1917.

USE OF FOOD FISH BY FERTILIZER FACTORIES.

It is strange that although the fish-fertilizer factories assert that they do not use food fish to any great extent in the manufacture of fertilizer; would consider it a wrong to do so; that none of their vessels are allowed to deliberately catch food fish for fertilizer purposes; they nevertheless appear to be vigorously opposed to this law.

Since the introduction of this bill I have received letters from various parts of the country in approval of this effort to save our food fish. One of these correspondents says:

> When I was a boy you could buy the nicest spots for 10 cents a hundred and everyone was salting them up for winter's use. Now if you get them for 60 cents a dozen you get them cheap. This is one of the causes of the high cost of living, for they used to put up enough fish in the summer to last them all winter. The menhaden fish boats say they do not take any edible fish. This I deny, for all fish that come to their nets, and even the menhaden, alewives, or fatbacks, as they are called by different people, are good edible fish, and how glad some of our people in the large cities would be if they could get some of them, and yet they are made into fertilizer.

Another correspondent writes:

> Senator ——— alleged that they (the fertilizer factory boats) caught no food fish, but only alewives or menhaden. Schools of menhaden are rarely seen in schools at the surface of the water until they are being chased by tailors, bluefish, rock, and other large food fish, and it would be a most discriminating net which could catch the menhaden without catching a large number of food fish, and in bringing in the large hauls that they do it is impossible to select and throw overboard all of the food fish and save them alive for the benefit of the community.
>
> Another thing about it is, the indiscriminate catching of these fish leaves nothing for the food fish to live on. There are plenty other sources of ammonia than fish scrap. It is true it is a little more expensive, but it is also of a better quality and produces better fertilizing results.

The real situation regarding the use by the fish-fertilizer factories of food fish is, I believe, clearly and fairly set forth by Mr. Talbott Denmead, president of the Maryland State Game and Fish Protective Association, in a letter to the Baltimore Sun under date of June 19, 1913.

His letter to the Sun follows:

> SIR: I have noted with interest the many letters in your open-letter columns lately concerning the fish question in Maryland, and it is very pleasing to note that some interest is being taken in the question.
>
> I think some of the information contained in these letters is misleading, because the situation as to the catching of menhaden and the laws relating to the same are not generally known, and with your permission I should like to give a little résumé of the situation as the Maryland State Game and Fish Association finds it:
>
> First, the laws of Virginia absolutely prohibit the use of all food fish for fertilizer excepting herring; again, they absolutely prohibit the taking and catching of small-sized food fish of any kind for any purpose and require such little fish to be immediately returned to the water when caught.
>
> The State of Maryland, on the other hand, does not prohibit the use of any kinds of fish for fertilizer, nor does it prohibit the taking of small fish.
>
> Now, when the gentlemen from Virginia write to the Sun and say that they do not violate the laws of Virginia they are probably correct. When they say they do not catch food fish with their menhaden outfits outside of the Chesapeake Bay they are again correct. When they say that they do not use food fish for the manufacture of fertilizer they are mistaken, for, first, they use tons of herring for the same, which is a food fish, but used legally when turned into fertilizer; and, second, their boats regularly visit the head of the Chesapeake Bay and purchase scowloads of fish from the fishermen there during the entire spring run. These scowloads of fish are for the most part herring, but anyone who has seen them and examined their contents will tell you that there are quantities of small white and yellow perch and other food fish mixed in with them. This can not be controverted; contracts are made for these fish by those in charge of the fertilizer factory boats with the Maryland fishermen in advance of the season; everybody in Havre de Grace sees these boats arrive every two weeks or so, load the decayed fish on their boats, and sail south with them.
>
> I have had many invitations to accompany the menhaden boats which fish for the fertilizer factories and see that they do not catch food fish on these trips, but it is not necessary for me to accept, for I already know that on such trips they catch few food fish; but that they get food fish in other ways and at other times, especially from the head of the Chesapeake in the spring, can not be denied by any person who is familiar with the situation. And by food fish I do not mean herring alone, but white perch and yellow perch as well.
>
> Your correspondents of your representative will have no difficulty in ascertaining this fact, if they will journey to the Susquehanna Flats, from the fishermen themselves, many of whom will admit that they had contracts with and sold and delivered to the Maryland and Virginia fertilizer factories fish of all descriptions at so much per barrel.
>
> Fishermen who have sold these fish for fertilizer have come to me and told me they believed it wrong and wished it could be stopped by law in this State, knowing that they were injuring themselves by thinking only of the present, with no thought of the future, but while it was lawful and others did it they would continue to do it also.

VIRGINIA FERTILIZER FACTORIES.

According to the census of manufactures of 1910, which covers the calendar year 1909, Virginia ranked fourth among the States in the manufacture of fertilizers. Fish was the principal material used, in respect to cost, representing 30.2 per cent of the cost of all materials in that year as against 6 per cent in 1904, and only 2.7 per cent in 1899. There were 45 establishments in the State engaged in the manufacture of fertilizers, of which number 13 reported fish as the only material used. The statistics of these 13 establishments show that there are 698 persons engaged; that the capital invested amounted to $1,042,861; and that they turn out products to the value of $1,180,816. In addition to these 13 establishments which use fish exclusively in the manufacture of fertilizer, there were a number of others that reported the use of some fish as material to be mixed with other ingredients in the manufacture of their products.

I have no desire to do these factories the least injustice, for I admire honest industry. But when one beholds a business of this character accumulating wealth so rapidly that it is able to pay enormous dividends; when one stops to reflect that these dividends are amassed through taking from the waters of the earth the fish that belong to us all; when in the reckless pursuit and inordinate desire to acquire this free-gotten wealth these wealthy corporations are prone to ride rough shod over the common rights of everybody to rob our waters of their fish, to deprive our fishermen on a smaller scale of the means of a livelihood, to influence higher the already increasing cost of living, I submit that it then becomes the imperative duty of our National Government to extend its strong, protecting arm.

H. R. 7775.

Unfortunately our scandalously wasteful destruction of our food fish is not confined solely to the fish-fertilizer factories. It was to cover other abuses that I introduced H. R. 7775. That bill, which aims to give the protection of the Federal Government to fish not remaining the entire year within the waters of any State or Territory, authorizes the Department of Commerce to define the seasons and regulate the manner under which they may be taken. It would enable the Department of Commerce to regulate seining, prescribe open and closed seasons, etc.

An important provision in this bill specifies that it shall not apply to fish when they may be in waters solely within a State or Territory, which waters are not the outlets of streams having their sources beyond the borders of said State or Territory. In other words, I have taken care to frame these measures so that not the least possible protest can be made upon the ground that they infringe upon the rights of any State.

Under this exception only those rivers or bays which extend through one State into the jurisdiction of another would fall under this act. Where a river is solely within a State, it is expected that that State will protect the fish within that water.

To those familiar with the nature and extent of present abuses in connection with seining, the need of a law of this character is apparent. If you come in between the capes of Charles and Henry and follow up the west shore of Chesapeake Bay, you will be so astonished by the intricate maze of nets which dot the waters that you will think it remarkable that any fish are ever able to get as far as the mouth of the Potomac. Some of these nets extend 7 or 8 miles out in the bay and so overlap one another that it is a wise fish indeed that is able to get by them. In some instances, that of Mobjack Bay being a noteworthy one, they so cover the mouth of a body of water as to render it nearly impossible for a fish to get in.

The inevitable result of such conditions has quickly followed, as is attested by the following statement issued by the Commissioner of Fisheries July 15, 1913:

Memorandum for the Secretary.

JULY 15, 1913.

We have just received from Neltzey Bros., old and experienced fishermen of the Potomac River a comparative statement of the catch of shad and herring in their haul seine at Ferry Landing, Va., for a period of five years, ending in 1913. The figures are so suggestive and so confirmatory of the position of the department that I think you will be interested:

Number of fish taken.

Year.	Shad.	Herring.
1909	9,000	1,400,000
1910	4,200	517,000
1911	1,450	310,000
1912	900	145,000
1913	700	60,000

The seine used in this fishery is 1,200 fathoms long and requires 45 men and 2 steam engines to operate it. The entire catch of the two seasons of 1912 and 1913 was not more than one day's catch in former years.

———, *Commissioner.*

REPORT OF BUREAU OF FISHERIES.

Much light is shed upon the condition of the fish industry in the Chesapeake Basin by a recent bulletin of the Department of Commerce. This bulletin is entitled "Serious Condition of the Fisheries of Chesapeake Bay and Tributaries," and was dated June 4, 1913. The bulletin is as follows:

> Inquiries conducted by the Bureau of Fisheries, Department of Commerce, show that the present fishing season has been the poorest in many years in most parts of the Chesapeake Basin, and the aggregate catch of the principal spring fish—shad and herring—will be much less than in recent years. The effects of the diminished run of fish will be seen from three to five years hence, when the reduced progeny of this season's supply comes back to spawn.
>
> The conditions in the Potomac River, which may be taken as typical for all the major streams, are in some respects the worst in 40 years. The upper reaches of the river have been almost barren of fish during the entire season, and nearly all the shad and herring fishermen have failed to meet expenses. At Ferry Landing, the largest seine on the river, 1,200 fathoms long, has discontinued operations in the middle of the season, owing to the scarcity of fish. In former years this celebrated fishing shore, with a smaller seine, sometimes yielded 200,000 or more herring at a haul, and up to 10 or 15 years ago took probably 15,000 to 30,000 fish at a haul on an average. Only a few years back from 1,000 to 1,500 shad were frequently taken at one set of the seine. This year the largest haul was 3,000 herring and 100 shad, while many times only 6 to 20 shad were taken.
>
> The shad hatcheries operated by the bureau on the Potomac and Susquehanna Rivers have had a very unsuccessful season. Their operations afford a good criterion of the condition of the fishery in the fresh waters, because the whole field is covered and nearly every ripe fish that is caught by the fishermen is stripped of its eggs by spawn takers sent out from the hatcheries. At the shad hatchery on the Potomac River the egg collections amounted to 29,886,000, as compared with 88,727,000 in 1912. The hatchery at the mouth of the Susquehanna River has been able to secure only 6,000,000 eggs to date, as compared with 10,000,000 in 1912, which season was regarded as an absolute failure.
>
> **Shad culture on a scale that is entirely feasible can, with minor protective legislation, maintain the shad fishery in almost any stream; but shad culture under existing conditions is deprived of one very essential requirement, namely, an adequate supply of ripe eggs for hatching purposes.**
>
> The immediate cause of the failure of the shad and herring fisheries this year is the diminished run of spawning fish into Chesapeake Bay from the sea and the enormous quantity of apparatus among which a very limited catch had to be divided. Inasmuch as the great bulk of the yield is taken in salt water, the remnant that was able to reach the spawning grounds in the streams was insignificant and wholly inadequate to maintain the supply.
>
> The remote cause of the present condition is excessive fishing in former years and the lack of even the minimum amount of protection that is demanded by regard for the most elementary principles of fishery conservation. Fish entering Chesapeake Bay have to run through such a maze of nets that the wonder is that any are able to reach their spawning grounds and deposit their eggs. The mouth of every important shad and herring stream in the Chesapeake Basin is literally clogged with nets that are set for the special purpose of intercepting every fish, whereas a proper regard for the future welfare of the fisheries and for the needs of the migrating schools would cause the nets to be set so as to insure the escape of a certain proportion of the spawning fish.
>
> Adequate protection of the fishes is compatible with great freedom of fishery and with a large and increasing yield. A very slight curtailment of the catch, perhaps as little as 10 per cent in any given year, may be sufficient to perpetuate the species and result in increased production in a few years. To disregard a requirement so small and to permit the continuance of an evil so serious simply invites and encourages the destruction of a most valuable food supply.

CONSTITUTIONALITY OF MEASURES.

Assuming that there may be some gentlemen in this House who might feel that these measures were unconstitutional and invaded some right which belonged solely to the various States, I submitted these bills to my colleague, Judge TOWNER, of Iowa, for his opinion, and after going over them carefully I understand it to be his view that they are practically on all fours with the migratory bird bill; that if the bird law is a constitutional measure, these measures are likewise constitutional. Judge TOWNER has given special attention to the study of constitutional questions, having been for a number of years a lecturer on constitutional law in the State University of Iowa. I am therefore inclined to believe that his opinion of the constitutionality of these measures is worthy of the most careful consideration of this House.

I am a firm believer in the rights of the States, and do not excitedly fling the Federal Government for help unless I am pretty sure that no help will be forthcoming from other sources. My views along this line cordially agree with those of Mr. Oregon Milton Dennis, of Baltimore, formerly State game warden of Maryland, who, in an address before the Fourth International Fishery Congress, held here in Washington in September, 1908, said:

> I am a State rights man, and am jealous of any action of the National Government which would deprive the State of a single right. But when I consider that the great bodies of water which produce natural food run through and by different States; when I consider that petty political influences, jealousies, and other equally silly reasons prevent a State from protecting from extermination a natural food product, I am convinced that the only solution of this question is in rational control of the fish by the Federal Government. I hope this Congress will put itself on record to that end, for I believe that not until this is done and the Federal Government legislates for fish protection and supplies its powerful backing to the enforcement of such laws will the question of fish protection be solved.

SECRETARY REDFIELD'S CONFERENCE.

Secretary Redfield, of the Department of Commerce, is fully alive to the importance of fish protection. His knowledge of the subject is not confined to the information he has secured through the official bulletins of the Bureau of Fisheries, which is under his department, but is also based upon his own personal knowledge. Exhibiting unusual activity as the head of a department which brings to him many burdens, he made a personal trip of inspection and investigation. The result of that trip was to make him a more ardent advocate of fish protection than he had ever been before. He called a conference to consider fish conditions in the Chesapeake Bay, to which he invited the governors of Maryland and Virginia and the officers of those two States whose work gave them special knowledge on the subject. That conference was held in the Secretary's private office on September 23 of this year. There was a free interchange of views, the result of which was to impress many of those present with the necessity for the National Government going forward with its protective measures.

At that conference there was submitted by Secretary Redfield a bulletin prepared by the Bureau of Fisheries. The information it contains throws so much light on the subject that I reproduce it here in full:

CONFERENCE IN RE FISHING IN CHESAPEAKE BAY AND TRIBUTARIES.

> Of late it has become increasingly evident that radical legislation is imperative if the fish in Chesapeake Bay and its tributaries are to be saved and the great and valuable fishing industry is to be preserved. **The past unsuccessful season has brought the authorities of the States of Virginia and Maryland and the Federal Government face to face with this serious and vital issue. The situation in brief is as follows:**
>
> **The catch of shad in Virginia has declined, as shown by the following table:**
>
> **1897. 11,529,474 pounds or 2,882,368 fish.**
> 1909. 7,421,864 pounds or 1,880,466 fish.
> 1913. 2,752,321 pounds or 688,080 fish (unofficial).

Report of the catch of shad and herring by Neltzey Bros., of Washington, D. C.

SHAD.

1909	9,000
1912	900
1913	700

HERRING.

1909	1,400,000
1912	145,000
1913 (unofficial)	60,000

The entire catch for the two seasons of 1912 and 1913 was not more than one day's catch in former years. We operate a seine 1,200 fathoms long (7,200 feet), requiring 45 men and two steam engines to operate it. The business was so poor that we did not pay expenses.

Statement of Mr. Haywood, of Gloucester County, Va., formerly agent for the Old Dominion Steamship Co., identified with steamship interests since 1901:

"The fish in Chesapeake Bay and tributaries is very much on the decrease. In 1901 I shipped 6,000 barrels, and from that year until the present time there has been a steady decrease. In 1912 we shipped only 1,700 barrels. I attribute this to three primary causes: First, that pound nets should not be set so close that fish can not get by to their spawning grounds; second, the mesh is too small; and, third, the fishermen around York Spit, Mobjack, and York Rivers are setting their nets in 40 feet of water, practically stopping up Mobjack Bay from S. E. Bar of Newport News to York Spit. No nets should be set at a greater depth than 25 feet."

THE YIELD OF SHAD IN MARYLAND.

1890, 7,127,486 pounds, or 1,781,872 fish.
1900, 3,111,181 pounds, or 777,770 fish.
1912, 1,912,249 pounds, or 478,062 fish (unofficial).

CATCH OF SHAD IN NORTH CAROLINA.

1908, 3,942,000 pounds, or 985,500 fish.
1910, 5,184,868 pounds, or 1,296,217 fish.
1912, 7,250,000 pounds, or 1,812,500 fish (unofficial).

In 1902 the amount of fish taken in North Carolina waters was 67,384,734 pounds of food fishes. Ten years later, 101,422,000 pounds.

(Note the increase in North Carolina waters compared with the decrease in Virginia and Maryland waters.)

It is a fact that the States of Virginia and Maryland have not been able to get together in the past to make and enforce laws that would properly protect and assure the perpetuation of the fishing industry in these waters. Virginia enjoys an advantage in that the shad, herring, and other migratory fish entering Chesapeake Bay on their annual run into fresh water first come within the jurisdiction of Virginia and remain there for some time, even when bound into Maryland waters. These fish are attracted by fresh water, and hence are drawn to the western shores of the bay, where the principal streams discharge. These shores are lined with nets that almost prevent even a small number of these fish from getting to their natural spawning grounds, foremost of which are the Potomac and Susquehanna Rivers.

One object of this conference is to consider the Linthicum bill, which places all migratory fish under Federal jurisdiction. The fact that the States of Virginia and Maryland have never agreed upon cooperative laws protecting the fishing industry is the strongest argument why this bill should become a law. The further fact that the existing laws can not be or are not effectively enforced is still another point in favor of the bill.

Shad and herring are defenseless species, but other valuable varieties which are predatory are also getting scarce. The striped bass, a real marauder, is losing ground and is in great danger. In the past tons of these fish of immature years, far too small to kill, have been marketed or caught and wasted until the resources are reaching a low ebb. The sturgeon is scarce now—in fact, may be considered rare in some waters—owing to the shortsighted greed of the caviar hunter and the apparent indifference of the States. The only salvation and the last resort to save this valuable species is an absolutely closed season for a period of years. Are the States in position to grant this?

It would seem strange if for the sake of a few hundred dollars revenue derived from the granting of licenses promiscuously to the net fishermen, regardless of the number set or the consequences to the fish supply, an industry worth millions of dollars is to be sacrificed. Restrictive legislation that will adequately conserve the supply is entirely compatible with active fishing and will in time lead to an increased catch. But little disturbance to the industry would ensue even at the outset if, as the result of a new cooperative policy, the food fishes of the Chesapeake region were given even the minimum degree of recognition that wisdom dictates.

In the prosecution of any fishery the first and most important consideration should be to make it certain that a sufficient number of spawning fish are allowed to escape to maintain the supply. But no such consideration has ever been observed in the fisheries of Chesapeake Bay and tributaries, where the object has been the capture each year of the maximum number of fish obtainable.

Assuming a catch of 2,000,000 shad in a given year, one-half of that number would be females filled with spawn. If only 10 per cent of them are allowed to escape the nets and reach the spawning grounds, over 2,000,000,000 eggs would be laid. This output plus the work of the hatcheries would go far to keep up the supply and the result would be an increased catch in a few years.

It is not necessary now to consider the details of legislation that is demanded. The important thing is to determine whether a policy can be adapted which will meet the situation. Lines along which legislation should go are:

(1) Close season.
a. Close season on sturgeon for a term of years.
b. Close season on all fishing sunset Saturday night to sunrise Monday morning.
(2) Restriction of amount of netting in a given area.
(3) Keep clear the way to spawning grounds.
(4) Prevent avoidable waste.
(5) Allowing no food fish to be caught except for food purposes.

EXTERMINATION OF THE STURGEONS.

Our wasteful and indifferent course toward our food fish is fast leading to a state in which their destruction exceeds their reproduction. This means nothing less than inevitable extermination and the sacrifice of this great industry, which is increasing as an important economic factor in the cost of living. I am told by a gentleman of Ocean City, Md., familiar with the fish industry, that 46 boats off the coast fishing for menhaden is not an unusual sight. To clear expenses each of these boats must catch at least 1,000,000 fish a day. Assuming that each catches only the minimum number, a grand total of more than 46,000,000 fish are taken each day for fertilizer purposes. When the day's catch is poor, it is a natural temptation to take anything that looks like fish.

The great decrease in the catch of shad has been referred to. Unless we soon change our present policy it will not be long before the shad will become comparatively as rare a species as is now the sturgeons. The wanton and criminal sacrifice of the sturgeons, whose delicious steaks probably many of you have often enjoyed, presages the future of our other food fish unless we adopt conservative measures.

Here is the story of the sturgeons as given me by Dr. Hugh M. Smith, the United States Commissioner of Fish and Fisheries, who is already winning an enviable reputation through his vigorous efforts for the protection of our food fish:

THE STORY OF THE STURGEONS.

(By Hugh M. Smith, United States Commissioner of Fish and Fisheries.)

The story of the sturgeons is one of the most distressing in the whole history of the American fisheries. These large, inoffensive fishes of our seaboards, coast rivers, and interior waters were for years considered to be not only valueless, but nuisances, and whenever they became entangled in the fishermen's nets they were knocked in the head or otherwise mortally wounded and thrown back into the water. I have seen the shores of the Potomac River in the vicinity of Mount Vernon lined with the decomposing carcasses of these magnificent fishes, witnesses to the cruelty, stupidity, and profligacy of man, and the same thing has been observed everywhere in our country.

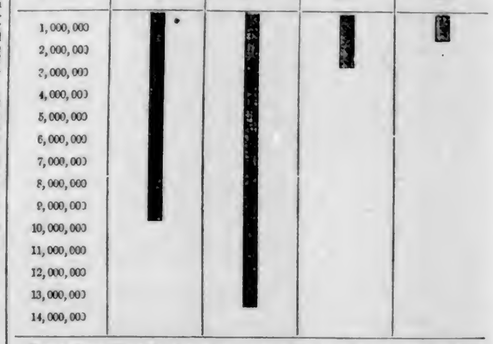
The next chapter in the story was the awakening of the fishermen to the fact that the eggs of the sturgeons had value as caviar and that the flesh had value as food. Then followed the most reckless, senseless fishing imaginable, with the result that in a comparatively few years the best and most productive waters were depleted, and what should have been made a permanent fishery of great profit was destroyed. Even after the great value of the sturgeon began to be appreciated by everyone no adequate steps were taken by the responsible authorities or insisted on by the fishermen, and the fish-eating public remained callous.

For a long time after the failure in the fishery had begun and was apparent to everyone the immature and unmarketable fish incidentally caught in seines, gill nets, and pound nets received no protection whatever in most waters, and were ruthlessly destroyed as nuisances, the decline thus being doubly accelerated.

On the Atlantic coast the catch of the sturgeon fell from 7,000,000 pounds to less than 1,000,000 in 15 years; on the Pacific coast the same meteoric history was enacted, a catch of over 3,000,000 pounds annually in the early nineties being followed by a few hundred thousand pounds in later years of the same decade, with no improvement since that time, while on the Great Lakes the yield declined more than 90 per cent in 18 years. In the American waters of the Lake of the Woods, one of the most recent grounds for the exploitation of the sturgeon, the catch decreased over 96 per cent in 10 years, notwithstanding a more active prosecution of the fishing.

The approximate sturgeon catch of the entire country at 10-year intervals, beginning in 1880, is shown in the following diagrams:

Approximate sturgeon catch of the United States.



Everywhere there is a steady downward trend in the catch. Some rivers that formerly supported a flourishing fishery are now absolutely depleted. The scarcity of the sturgeon and the demand for their flesh and eggs have run up the price to an extraordinary figure, never attained by any other fish, either in America or anywhere else. A mature female sturgeon often brings the fisherman more than a hundred and fifty dollars, and it is a poor fish that can not be sold for twenty to thirty dollars on the rivers of the east coast.

The most serious aspect of the sturgeon fishery is that, owing to the declination of the schools of breeding fish and to peculiarities in spawning habits it has been impossible as yet to inaugurate sturgeon culture anywhere in America. Attempts at artificial propagation have proved utter failures on the Great Lakes, Lake of the Woods, Lake Champlain, Delaware River, and other waters, and the expenditure of considerable sums of money by the Federal Government has sometimes failed to yield a single batch of eggs suitable for incubation.

Everywhere in America under existing conditions the sturgeons are doomed to commercial extinction, and it requires no prophet to foresee that in a comparatively few years sturgeons will be as scarce as the dodo.

What is demanded in every State in which these fishes exist or have existed is absolute prohibition of capture or sale for a long term of years, certainly not less than 10. Any less radical treatment would be only trifling with the situation.

INCREASING IMPORTANCE OF FISH FOODS.

For generations the people of the United States have been the world's champion meat eaters. Possessing grazing land measured in square miles and innumerable cattle, fresh meat daily has been obtainable at the lowest possible price. Despite the fact that we possess the world's richest fisheries we have disdained to include fish as an important part of our diet. For this reason the development of the fisheries of the United States was undertaken in the face of national apathy toward the subject. Probably more owing to the tenets of the Catholic faith than anything else fish as an article of food gained national recognition.

Under the economic readjustment now going on the popularity of fish as a staple article of diet is increasing. The placing under cultivation of vast stretches of our prairie lands has so restricted the grazing area for cattle that the stock raiser of the West finds it no longer possible to avail himself of the rich pastures which were once his. This has resulted in a decrease in the supply of cattle with a consequent increase in the price of those which are butchered. This means that the American people must change their mode of living, and that instead of serving fish as an adjunct to the meal it must begin to constitute the meat portion of the repast.

INTEREST OF THE FISHERMEN.

In this day of widespread cooperation and conservation it behooves us to consider whether we are protecting those blessings which have been given us for our enjoyment and sustenance. Is it not self-evident that it is our duty to use with prudence, frugality, and care these gifts which nature has bestowed upon us?

Are we not the trustees for these great natural assets with a duty devolving upon us not to squander the property or principal, as it were, but to hand it down for the use and enjoyment of those to come? Is it fair that we who have within our control a vast storehouse of nature capable under proper care of feeding millions to allow it to be destroyed? Do we not owe it to posterity to maintain this valuable asset, thereby providing employment for those engaged in the industry and furnishing an economical source of food for the people of this country whose food problem is becoming more serious each day?

I would not advocate anything which would injure those whose livelihood depends upon their fishing privileges, and I am firmly of the opinion that it would be to the permanent benefit of all persons engaged in the fish industry to assist in securing legislation by which that industry can be protected and fostered and yet not unnecessarily hamper those engaged in the business. As yet it is within our power, through the observance of sensible laws and regulations, to prevent the total destruction of our food fish and bring the industry back to its prosperity of old.

Unless we check present abuses, it will not be many years before the fish industry will be destroyed. The manifest importance, therefore, of cooperation, of the necessity for restrictive measures, is apparent. The success of this reformatory policy holds within its keeping the salvation of the fish industry, now employing thousands of people and feeding millions. No particular class of people are more vitally interested in the success of this effort than those now engaged in that industry, for no people employed in a dying industry can be truly happy with the constant dread always before them that in the eventide of their lives their source of employment will have ceased.

Therefore we owe it to ourselves, to the thousands of fishermen to whom the fish of our rivers and bays furnish employment, to the millions of our population to whom fish is a part of their daily food, to enact into law the measures I have submitted for fish protection. The Bureau of Fisheries has approved these measures, for they are legislation along the lines desired by it, the only legislation which will effectually cover the situation, that will enable us to protect and preserve this immensely valuable national asset.

Columbus, the World's Benefactor—The Man of Destiny, Who Conquered Through Faith in an Overruling, Guiding Providence.

SPEECH
OF
HON. CLEMENT BRUMBAUGH,
OF OHIO,
IN THE HOUSE OF REPRESENTATIVES,

Monday, October 13, 1913.

Mr. BRUMBAUGH. Mr. Speaker, as Columbus Day is now very properly and fittingly observed everywhere throughout the Nation, and as the House of Representatives of the United States is now in session on the day that such exercises are being held, I ask unanimous consent of the House to be permitted to address the House and submit some words of praise in honor of and in commemoration of the life, services, and fame of Christopher Columbus, the world's great benefactor, the man of destiny, who conquered through his sublime faith in an overruling, guiding Providence.

Representing a congressional district that has within it the largest city of the world bearing the honored name of Columbus, I have thought that I might appropriately ask the time and attention of this great legislative body of the Nation to present a few remarks in commemoration not only of Columbus Day, now so fittingly observed throughout the Nation, but also to commemorate the life and fame of this great and good man.

Mr. Speaker, there are some great benefactors whose services to mankind have been so transcendently great that we honor ourselves by remembering to honor them. This is eminently true of Columbus.

Christopher Columbus was one of the greatest souls that ever wore the clay of earth about him. To rightly estimate the superb dimensions and nobility of this great character we must study his life in connection with the beliefs and prejudices of the age in which he lived.

Because he lived on the mountain top of faith and vision, above the fog and ignorance of his age, he was misunderstood, maligned, and often persecuted.

With supreme courage, heroic endurance, and with an unfaltering faith in God he combated the superstitions of his day, became the benefactor of the ages, and bathed his name in immortality.

COLUMBUS, THE GREAT STAR IN THE HEAVENS OF FAME.

Every age has her great characters, every land her great heroes. Backward across the centuries of the past we can see yet a few sunken mountain peaks jet out from oblivion's sea.

The telescope of time as it sweeps the historical heavens still shows here and there those great stars whose magnitude is unabating through the cycling ages. Among the greatest is the name of Christopher Columbus.

The greatest souls of all history are those who, like Columbus, have conquered in the face of every adversity—those who have defied fate and all that fortune, death, and danger dare—throwing all in the balance, have hitched their chariots to the star of hope, led victory captive, and snatched immortality from the ruins of ceaseless time. This did Columbus.

Few men win immortal fame, or even respect, admidst the applause of the people of their age, but this does not condemn them in history:

Seven cities claimed Homer dead
Through which the living Homer begged his bread.

The world yet ponders over the witticisms of Diogenes, yet Diogenes had no better bed than his ever-present tub.

The eloquence of Cicero still thrills the world, yet Cicero lost his life while pleading the cause of right and justice for the people who slew him.

Moreover, the greatest events of history have been accomplished by men out of touch with their times and not only in the face of ridicule, but contrary to the wisdom and teachings of their age.

They were always doing the impossible.

Hannibal did the impossible when he crossed the Alps.

Cæsar conquered contrary to all military rules of his time.

Thus lived and died and became immortal Demosthenes, Socrates, Plato, Galileo, and the One who was greater than man—the Christ—the Savior of men.

THE FALSE CONCEPTIONS AND TEACHINGS CONCERNING THE FORM, DIMENSIONS, MYSTERIES, AND SUPERSTITIONS ABOUT THE EARTH.

Columbus sailed in the face of all the learning of his age, contrary to the religious thought of the world and against the accumulated wisdom of mankind.

No one can understand the propelling purposes in the life of Columbus, the supreme courage and faith of the man or even the history of the age in which Columbus lived, without first thoroughly understanding the conceptions and teachings the people of the world held, both before and at the time Columbus lived, concerning the form, size, and dimensions of the earth, and also the superstitions that filled the minds of all men concerning the powerful, mysterious forces that governed the earth, the lives of men, and even determined the destiny of the souls of men.

It is most interesting and also necessary to notice the conceptions the people held concerning these things to understand the struggle through which Columbus passed and the great work that he accomplished for all men of all times.

CHINESE CONCEPTION OF THE FORM OF THE EARTH.

The Chinese geography taught that China was the center of the world and covered the face of the earth, the other lands being small islands in the seas. The sky was held up by seven pillars in the center and rested down on the land at the rim of the horizon.

HINDU THEORY OF THE EARTH'S FORM.

The Hindus taught that the world rested upon four elephants. The elephants stood upon the back of a huge world-wide tortoise. To carry the investigation below the tortoise was profanity.

Plato at first taught that the world was a cube—a six-sided figure. And so each nation of antiquity had its own peculiar view of the earth, to dispute which stamped the offender as impious to the gods and a heretic in religion.

THE CONCEPTIONS OF THE ANCIENTS AS TO THE FORM OF THE EARTH.

And here, as throwing a flood of light upon Columbus and his times, as well as explaining the religious and scientific theories concerning the earth's form, shape, and dimensions, let us digress to notice the teachings of the ancients in regard to our earth from the time of their first crude conceptions of its form and dimensions till the truth blossomed forth centuries later in the knowledge of the earth's rotundity.

Doubtless the first man, as he stood alone upon the earth and looked into the face of the silent stars, speculated as to what this world was, its extent, and its sustaining force.

THE FIRST CONCEPTION—THE EARTH A PLANE.

The first and oldest conception of the world's shape, as taught by the ancients, was that the earth was a plane. The first theory was something like this: They looked upon the earth as a plane stretching away beyond the Ægean Sea. Around the plane ran the broad, deep River Oceanus. Beyond Oceanus was the region of fire and the abode of the spirits of the dead and the realm of darkness. Here Hemera, Earth, joined his brother, the heavens, and here beyond the river was the dreary house of death. This conception of the earth was substantially the common belief of the people for centuries and must be noted to understand Columbus and his time. This was the conception of that wonderful people, the Greeks.

There is preserved to us a tale told by the satyr Salinus to the King of Phrygia. This speech was made 400 B. C. It is such a vivid description of their conception of the earth and contains sentences of such surpassing beauty and full of such historic suggestiveness that I shall take the privilege of repeating it here. The satyr delivered himself as follows:

> The ocean sea circumscribeth and surroundeth the island named Europe, Asia, and Liberia. Beyond this ocean there is a continent of dry land infinite and unmeasurable, with green meadows and pastures, sundry big and mighty beasts. In the borders adjacent to the country is a perilous place; a gaping gulf, a bottomless pit, and the ground openeth like the mouth of insatiable hell. It is neither perfectly lightsome or absolutely darksome, but the air hangeth over with a certain kind of cloudy redness. Here two floods set their courses that way—one of sorrow and one of joy—and about each stream grow trees. The tree which grows by the flood of sorrow yieldeth its fruit, and if any man taste thereof a stream of tears flows from his eyes like a river and the whole race of their lives is turned into lamentations insomuch that weeping and wailing he knitteth his carcass in winding sheets for the greedy grave to swallow and devour.
>
> The other tree, which prospereth upon the banks of the flood of pleasure, bears fruit clean contrary to the former, for whoever tasteth thereof he is presently weaned from the power of his ancient appetite and desires so that the remembrance of them is quite abolished. But also, little by little, he recovers the years of his youth and becomes young again. The forwardness and crookedness of old age is first shaken off. The amiableness and loveliness of youth begin to bud, insomuch that they presently put on the estate of striplings, then become boys, then change to children, then reenter infancy, and at length, in great happiness, death maketh a final end of all.

Such was their conception of the earth and the spirit land beyond. What a picture! This was their theology, their geography, their view of the after life—the tree of good and evil, a material hell to shun and a glorious eternity to gain. Such was the belief that filtered down through the minds of the ancients down to Columbus's time. Ancient literature and mythology are full of such conceptions of the world and of the future life.

Mythology taught that somewhere in the plains of the valley of death was a little stream, a sip of whose waters caused all forgetfulness of all sin and pain to the troubled spirits of the departed souls.

THE RIVER OF FORGETFULNESS AND THE SPRING OF YOUTH.

Moreover, all the world believed that somewhere was the spring of youth, where you would bathe and not only be whole but young again. Just where this spring was no one knew, but it was the duty of the good to search for it. Popular imagination of Columbus's day said it was in that marvelous diamond-robed India. These views were not idle imagination, but thoroughly believed by the people.

Later we find the repenting old man, Ponce de Leon, searching for this spring of youth among the evergreen foliage of Florida. About the time of Plato and Aristotle they began to conceive of a different shape for the earth.

THE SECOND CONCEPTION OF THE FORM AND SHAPE OF THE EARTH—THE EARTH A SPHERE.

The second conception of the earth was that of the sphere. This was a natural outgrowth of the idea of a plane. Who first promulgated the theory that the earth was a sphere is not known. Pythagoras we know believed it; Aristotle taught it and made it orthodox among the learned of his age, while Hipparchus and Ptolemy made it at last a part of the religion of the Greeks. The Greeks transmitted it to the Romans, and Rome, through the teachings of Pliny, Virgil, Ovid, and Cicero, impressed it upon barbaric Europe. It passed into the books of the Middle Ages and filtered its way down to Columbus's time, and thus made possible the invention of the magnetic needle, the navigation of the world, and the discovery of America.

THE NEXT GREAT STEP—THE EARTH'S DIVISIONS AND INHABITANTS.

After this belief became settled the next step in the development naturally came in the form of the questions which they asked themselves. If the earth is a sphere, first, how is it divided; second, are the unknown parts of it inhabited? You will see at once that these were momentous questions. Upon their answer depended the destiny of the world. First, is it divided? How was this question worked out?

The Arabs upon the plains of Assyria were our first astronomers. In their silent tents at night they had watched the stars in their courses and listened to the music of the spheres. They had divided the heavens into circles. It was a near thought to transfer these circles to the earth and divide the earth by circles into five zones. This great thought is credited to Pythagoras.

THE MYTHOLOGICAL FABLES.

The Greeks believed then in two temperate zones, each capable of sustaining life, but that no life existed in the other zones. As to the division of land and water, some held that one ocean covered the whole earth, and that the land was an island. The other theory was that the earth was so large that it held the sea in a hollow form. To this latter theory belong those beautiful fabled stories of Atlantis holding the heavens up; the Pillars of Hercules; the golden apples in the gardens of Hesperides; the feats of Hercules, who held up the heavens for Atlantis while Atlantis went off on a ramble for the golden apples watched over by the fair goddess in the gardens of Hesperides.

THE UNKNOWN INHABITANTS.

Was the unknown earth inhabited? Columbus was not the first, of course, to believe that it was inhabited.

Pythagoras held that the whole world must be inhabited.

Aristotle proved that the Southern Hemisphere must have its temperate zone.

Pliny taught that there were antipodes on the other side of the globe.

In Cicero's Republic the younger Scipio, long a dead, is made to relate a dream. The hero of that name, Scipio Africanus, dead centuries before, takes Scipio the younger up to the Milky Way of the sky to show him the vanity of human fame. He tells him that there were places where his authority could never reach although he should conquer the whole known earth. "Dost thou see in how few places the earth is inhabited and that tribes live directly off from you on the other side?"

THE MARVELOUS INDIA.

Such was the Greek thought of the world.

To the north was the happy land of the Hyperborians, beyond the blasts of Boreas. To the east was wondrous India. To find a waterway to this marvelous India became the mainspring of all of Columbus's actions. To the south was Ægean, which ran into unknown Oceanus. But the west! What was it? The west was all the world beyond the Pillars of Hercules or the Straits of Gibraltar. There was the great land of fables. Here the great Atlantis held up the curtains of the sky. Here were the Elysian fields, the home of heroes exempt from death, and those dying in battle—a thought very like the Indians' happy hunting ground. Of these fields the poet, Pindar, sang thus in beautiful strains:

> Those who have had the courage to remain steadfast and to keep their souls altogether from wrong pursue the road of Zeus to the castle of Cronas, where o'er the isles of the blest ocean breezes blow, flowers gleam with gold, and with these they entwine their hands with bracelets and make crowns for their heads.

Such was the song. Illustrious Pindar! Magnificent barbarian!

EARLY LIFE OF COLUMBUS.

Such in brief was the conception of the earth when Columbus came on the stage of action.

In his early life and up to the age of 35 there is nothing of importance or promise of greatness. His father was a poor wool comber; some of his kindred sea rovers. These sea rovers were pirates and robbers. They hired themselves out to fight and plunder for any potentate who wished to employ them. With these desperate characters Columbus was sometimes forced to associate. From the age of 14 to 35 his home was a ship; his life was that of a rover of the seas.

It was with these sea robbers that the great captain learned the art of navigation; learned the power of control; learned how to carry himself in fight when with sword in hand he sprang over the board of the hostile vessel. The story of one of these sea fights off the coast of Portugal is preserved to us by Columbus's son, Ferdinand. The fight lasted, we are told, from morning till night. Early in the engagement the fighters had linked their ships together with iron grapplings never meant to be loosened. No quarter was ever asked or given. Late in the day both vessels became enveloped in a sheet of flame of fire and the only escape was to jump overboard. Columbus plunged into the sea and, being an expert swimmer, swam by the help of an oar 8 leagues to land.

Such was the life of Columbus up to his thirty-fifth year; wild and roving, but more humane always than the companions with whom fortune and circumstance forced him to associate.

GOD MOVES IN A MYSTERIOUS WAY HIS WONDERS TO PERFORM.

Mighty forces were converging, and Columbus was the man upon whom, by past training and the decree of Providence, these mighty forces were to converge. Columbus, by that destiny that shapes our ends, was changing with it, destined to play his part in the world's greatest drama since the life of Christ on earth.

THE RELIGIOUS PERIOD OF COLUMBUS'S LIFE.

At the age of 35 a sudden change occurred in Columbus's life. He suddenly left his seafaring life, settled down to deep study concerning the earth and the religious condition of the Holy Land, then in the hands of the infidels. An Italian by birth, he accepted the religious faith of his land and age and became a devout Catholic.

A great religious impulse now seized him and never left him. He believed that the world would come to an end in about 100 years; that before that time the Scriptures must be fulfilled; that the Gospel must be carried to the heathen; that he was the chosen agent of Heaven to do that work. Moreover, to do this work Columbus reasoned that the Holy Land and the sepulcher of our Savior, Jerusalem and Palestine, now all in the hands of the Turks, must be taken and redeemed to Christianity. To do this he must lead an army to India.

THE TRADE WITH INDIA.

It will now be necessary to note the condition and enterprises of the world at this time, when Columbus's great purpose was moving his soul. All the courts of Europe were one giddy round of extravagance. The court ladies demanded the precious jewels, perfumes, and spices of India, and a brisk trade between every court in Europe and India sprang up to meet this demand. But the voyage could only be made by a long and perilous journey—a journey through deserts and mountain cliffs beset by desperadoes and robbers.

Yearly the caravan of travelers, with their camels, made this perilous journey, and yearly these mountain desperadoes, who made a business of murder and piracy, grew more desperate. But the demand was great, and many companies of men lost their goods, their camels, and their lives in the efforts to supply that demand. At last Constantinople, the last natural passway, fell into the hands of the Turks, and the last gateway to India was closed. The problem now arose whose attempted solution finally led to the discovery of America.

A WATER ROUTE TO INDIA.

The burning question now arose how to reach India by water. Columbus, by his study, had come to the conclusion that he could reach India by a sea route due westward. Should he do this, he knew that he would become the greatest benefactor of the world; for, according to his conception of the size of the earth, he would then have carried the Gospel all over the earth and have prepared the earth for the coming of the Kingdom of Heaven. Besides, according to the customs of the times, whoever opened up the way to India would not only redeem its people, but be the rightful possessor not only of the people but of all the marvelous wealth of fabulous India. To this end Columbus devoted his life with a perseverance which nothing but death could stop.

Columbus's mistake was not in the form, but in the size, of the earth. Aristotle states that the mathematicians of his day placed the circumference of the earth at 400,000 stadia. Later Strabo figured it down to 180,000 stadia.

Columbus accepted the views of Strabo. He believed that Europe covered four-fifths of the earth's surface and that only a narrow sea separated them on the west. The thought that between India and Italy to the west was the great Atlantic, then the great American Continent, and then still the vast Pacific Ocean, never entered his head. He was sure that it was only a short trip from Italy to India through this western sea of horrors; that the way could be found by any navigator with the courage to defy the terrors of the western seas and steer due westward to India. India, then, by his conception, completed the circuit of the earth. The thing seemed so feasible and plain that Columbus became possessed with the idea to do it. He always believed that he had done it, and went down to his grave in that belief.

FINDING A WAY TO INDIA.

And why should all the nations of the earth desire to find a waterway to India, a desire which was not only manifest in Columbus's life, but in that of every sailor for 300 years after him? I have already alluded to the great demands of trade for precious gems, perfumes, and spices, and the perils of the journey and the final stopping of the last passway by the capture of Constantinople by the Turks.

But, beyond all this, India was believed by the people to be a veritable paradise, a land of wealth and pleasure beyond the loftiest imagination of the mind of man to conceive.

About this time Sir John Mandeville and Marco Polo had written some wonderful stories of India, which had stirred the popular mind to feverish excitement. It is necessary to see what they thought India to be in order to understand Columbus or the history of the times. Take the story of India as given by Polo, a brief part of which I here relate:

POLO'S STORY OF THE KINGDOM OF FABULOUS WEALTH, INDIA.

First, to start with, he affirmed that in the Far East had reigned for centuries a line of mighty monarchs of the race of Kublai-Khan. Their Kingdom was made up of many Provinces or States, one of which was Mangi, bordering upon the sea. Let us for our purpose just consider this one Province. In this Province, Marco Polo said, were 12,000 cities, all within a few days' travel of each other. As a sample of what the people believed of all India let us take the description of one city of the 12,000 cities of this one Province of the Kingdom, Quinsai. Quinsai was 100 miles in circumference; 30,000 soldiers guarded it; 100,000 police were on duty within it; the main street of the town was 40 paces wide and 33 miles long; at the distance of every 4 miles were market places, each 2 miles in compass, and 40,000 to 50,000 people met here to trade daily. The streets were all paved with pure stone. The waterworks were so arranged that twice a day the river was conducted through the streets sweeping the filth into a great pool beyond and then into the sea. The city had free hot and cold baths and trained fire department. The palace of the King, with its wide terraces and courts, filled a space of 10 miles, and here on the days sacred to the gods 12,000 guests were feasted at a time. The people of Quinsai were so wealthy that a part of each day was spent on the lakes in pleasure barges for banqueting, a part in driving through the parks, and a part in resting under inviting bowers, whose branches sent off perfumes at every sway.

INDIA A PARADISE.

Such was the description of this one city of the 12,000; "a city for the excellence whereof," declares Polo, "the world hath no equal. It hath so many pleasures a man would think he were in paradise." The description of the whole Kingdom was in keeping with the above.

Polo continues: "Throughout the Kingdom radiated roads all magnificently paved. Out of the soil sprang waters which cured all diseases." I shall not weary you with a description of the

King's winter palace of pure white marble, roofed with gold; 10,000 picked soldiers always acted as bodyguard, and his army was like the sands of the sea and the generals sat in chariots of solid silver. Such was the description of this wonderful India. The people believed this story. The people believed that in India priceless pearls were scattered like pebbles. Mountain peaks of jasper pierced the sky; palaces were roofed and floored with gold. In India rivers of healing for all diseases sprang out of the ground. The climate was so luxurious that every tree, as it swayed in the breezes, sent off an incense that filled the air with sweetest perfume. Such was in part the fairy story of the traveler and such was the belief of the people of the world in the age Columbus lived.

And now, after the blockade of the pass at Constantinople, commenced that great movement to find a water route to this rapturous India that resulted in the discovery of America, for that nation which should discover this route could, by the customs, claim the people and their riches for the service of God and the true church.

THE TWO GREAT UNKNOWN FRIENDS, PRESTRELTO AND PRINCE HENRY OF PORTUGAL.

The great truth, the invaluable information which became his, was furnished Columbus and worked out in the gallant, patient struggles of two men hardly known to the pages of history.

Prestrelto had been a brave sailor under Prince Henry. He had braved the western sea of horrors; had made charts, maps, and journals of his trips. Columbus, by his marriage to Dona Prestrelto, on the death of her father came into possession of these invaluable maps. It was this that gave Columbus his first conception of a water route to India and explains the great change in the life and habits of Columbus.

PRINCE HENRY OF PORTUGAL AND THE WESTERN SEA OF HORRORS.

The other man was the gallant Prince Henry of Portugal, who built his home by the sea where its roar, as he said, would ever be in his soul. He called all the wise men about him. He had rejected the teachings of the wise men regarding the possibilities of navigating that fearful western sea of horrors. And what and where was this sea of horrors that played such a part in the world's development? It was all the unknown waters beyond the Pillars of Hercules, or the Straits of Gibraltar—our Atlantic. The wise men taught and the people believed that in this western sea of terrors was a heated region beyond the boundary line of which no one could breathe the air and live.

THE WESTERN SEA OF HORRORS—THE SEA OF FIRE AND DEATH.

The poet, Pindar, had said beyond its gates no man, however brave, might navigate. Only a god might voyage these waters. The people believed this sea to be presided over by the spirits of fire, death, and darkness. Such was the belief that chained and bound navigation for centuries and which played such a great part in the world's development, whose terrors kept sailors for centuries in the Mediterranean, blocked the progress of the world, and all but made the sailors on the voyage with Columbus compel him to turn back when almost in sight of America. But Prince Henry said, "We'll cross that line," and he did. And in doing it he gave the world, I think, its greatest example of physical courage and broke one of the greatest cords of bondage that ever bound the human mind in the darkness of ignorance. Prince Henry liberated the world from its greatest superstition. Columbus got the benefit and praise of the completed work of this great heroic deed.

From these two sources Columbus got all his practical valuable information. From his conception of the size of the earth the shortest way to India would be to the west. He now became thoroughly satisfied that the kingdom of the great King Khan and all that wonderful India could be reached by any navigator bold enough to defy the fancied terrors of this sea and sail for 30 or 40 days to the west, and for the accomplishment of this he dedicated his life. The western sea of darkness had no terrors for him. Prince Henry had smashed that superstition.

THE ONE OBJECT OF COLUMBUS.

Columbus, in the words of Shakespeare, now realized that—

There is no darkness but ignorance.

He felt and realized that the blackest darkness is ever the superstitions of ignorance.

He now became a man wrapped in only one thought. His conception was first and foremost to carry the Gospel to India, and, second, to take the riches of India to equip an army which should take and redeem Jerusalem, the Holy Land, and the sepulcher from the hands of the infidels, the Turks, and thus bring the whole earth under the saving influence of the church. This was the sublime conception that filled his mind and thrilled his soul. This is what he thought he had done when he discovered America.

He held on to his purpose through 18 years of disappointment, starvation, and ridicule with the faith and determination of a martyr. For this great work he believed God had singled him out and set him apart. He said:

My name is Christopher, which means Christ bearer. Therefore I am to bear the Gospel to the ends of the earth.

He was a diligent student of the Bible and studied its prophecies. He believed that the end of the world would come when the Gospel had been carried to these lands. Moreover, he believed that the time of the end was close at hand; that in one century the end would arrive.

Listen to the following. I quote his own words. Speaking after his voyage to America, in profound ignorance of what he had done, he says:

God made me the messenger of the new heavens and the new earth spoken of by St. John in the apocalypse after having spoken of it by the mouth of Isaiah, the prophet.

And he adds:

He showed me where to find it.

Further, as showing his belief, he says:

Our Lord wished to do a miracle by my voyage to India.

It was necessary to hasten his purpose, for—

By my calculations there only remained 100 years till the end of the world.

THE HEROIC, PATHETIC, STRUGGLING PERIOD OF HIS LIFE.

This purpose once conceived, nothing but the hand of death could still that great determination which beat in his soul. For 18 years he tramped all over Europe talking to anybody and everybody who would listen to his wonderful scheme. Every court was harangued and bored by this enthusiast of his age talking to them what they termed "unintelligible stuff." Defeated in one court, footsore and weary, he took up his tramp to another.

His method of procedure was something like this: With his charts, maps, and drawings he would tramp to the capital of a kingdom. There he lived partly by drawing and selling maps and partly by begging his bread, talking all the time to everybody who would give him attention, until gradually he got nearer to the King. When the circle of interest he had generated reached the King, Columbus would be admitted to his presence.

With a new ray of hope Columbus presented himself before the monarch. Here he made the same eloquent plea, describing in glowing terms both the honor and wealth that would come to that kingdom which should send him forth. The monarch, usually ignorant, but always moved with interest, would then submit the question to the learned men of the court. Before the court of the nation's collected wisdom Columbus next appeared to tell the story that burned in his soul, and here Columbus was always sure of defeat. In regard to him the wise men differed, as wise men always do; some believed him crazy, others thought him a harmless crank, while others thought him a smart impostor hatching out some heretical scheme.

In regard to his theory that the world could be sailed around they were all of the same opinion. It was too absurd for consideration. The idea that the world was round, that on the other side were men who went about with their heels over their heads, the wise men declared to be positively funny, and they held their sides as they roared in derision at this sad-eyed, pious, determined crank. But, further, said they, if the world is round, there is another sky where snow and ice fall upward, and that, cried they, is blasphemy. So they all advised the King to have nothing to do with this ridiculous, absurd scheme and to invite this pest of the court to move on. And thus, with a perseverance which nothing could wear out and a patience absolutely unconquerable, Columbus waited, toiled, and suffered for 18 years.

He first asked aid of Genoa, his native city, and was refused. Next he turned to King John of Portugal, the successor of the great Prince Henry. He told John of the nearness of time, his heavenly mission, and assured him that he could give him India in two months.

After having been made a football of ridicule by the wise men of the court, Columbus left Lisbon and went back to Cordova to lay the matter before Ferdinand and Isabella, but they were then engaged in a civil war driving out the Moors and had no time for his scheme. Columbus, to gain their favor, joined the army and was a soldier at the fall of Granada. At last he gained a hearing and suffered defeat at the hands of Ferdinand and Isabella. It was with a sad heart that he turned away from his last hope. Now occurred one of the darkest hours in Columbus's life. There are hours so dark in human life that even hope seems to have left our breast. Such an hour had come to Columbus.

THE TURNING POINT.

There are times when the success of human life and destiny of the world hangs upon a straw. I propose to show that it was the happening of the most insignificant event that not only decided the destiny of Columbus's life, but the fate of the world in the discovery of America.

Columbus, on his journey from the court of Ferdinand and Isabella, stopped, footsore and weary, at the gates of a convent to get a morsel of food for his starving little son, whom he led by the hand. This is not an event history would stop to note, you say. Aye! But that determined the future life of the great discoverer. With Lowell we may say: "How small an arm may turn the iron helm of fate."

"Give me food and drink for my starving boy," cried Columbus. The good monk, touched to the heart with pity, gave him food and insisted that Columbus stay for the night.

There are times so full of bitter disappointment that we long for a place and friend, that we may lay open our very heart. Columbus had found such a place and such a friend in the presence and at the fireside of the good monk.

Columbus, as he sat by the fire and talked the night away, seemed inspired. He wrapped the monk in wonder. Some of that light that never was on sea or land shone about him. As he told this religious man of the coming of the Kingdom his face lit up with angelic brightness. But what of the outcome? It was a turn of the wheel of fate. Little knew Columbus that upon this talk this night fortune would smile upon him and mark him for her own. This convent became Columbus's home henceforth in all his dark and trying hours, but vastly more important than this was the seed sown and the later harvest.

THE PINZON BROTHERS.

Now, there lived by the convent three remarkable brothers, very pious and very wealthy. They were learned, wealthy, religious, and influential. They took up Columbus's scheme with as much zeal as if it had been their own.

It was the Pinzons that made Columbus's success possible.

It was the Pinzons that got him the ear of Ferdinand and Isabella again.

It was the Pinzons that furnished Columbus his money; and when at last he sailed it was the Pinzons that commanded the other two ships in which he sailed.

The Pinzons lived at Palos, and now the schoolboy knows why his history has this sentence:

Friday, the 3d of August, 1492, Christopher Columbus set sail from Palos, Spain, with three ships, manned by 120 sailors. He knelt on San Salvador October 12, 1492.

HONOR TO WHOM HONOR IS DUE.

It was after the Pinzons became sponsor for him that Isabella said: "Call him back; he shall sail if I have to pawn my jewels." "Honor to whom honor is due." The honor is due the Pinzons. Columbus returned to court with all haste. The articles were soon drawn up, the Pinzons furnishing Columbus's part of the expenses. Now began the search for ships. But who would rent a ship to go upon that western sea of horrors? No one but the Pinzon brothers could get the ships. When he finally succeeded in getting his ships the question arose, Where are you going to get your crew? Who would be such a fool as to peril life in certain death upon the sea of darkness, death, and fire? The people looked upon the intended trip as the wild vagaries of a madman or a crazy lunatic.

THE CREW FOR THE VOYAGE.

There were only two men in all the Kingdom who could be depended upon.

Martin Alonzo Pinzon would take the ship *Pinta*.

Vicente Yanze Pinzon would take the ship *Nina*.

Columbus himself would take the *Santa Maria*.

But where is the crew? That was the burning question. Who for pay or the love of fame and glory would sail out into a sea guarded over by the spirits of the dead, whose atmosphere of fire no one could breathe and live? No one. Criminals were offered their liberty if they would go. They refused, but were at last pressed into service. When those ships left Palos there was weeping and wailing, for even bad men have hearts and feared the pictured sea of terrors.

THE VOYAGE.

Volumes of thrilling interest have been written about that voyage, that first trip of Columbus and his three crude ships, battling with death in the briny deep; the criminal crew, the hardships, the mutiny, the dangers to Columbus, his prayers, and his Christian faith in God that held him true to duty in the face of every danger.

I have read of these things with unabating interest. I should like to tell something of them, but for want of time I can not go into that thrilling subject now.

We only know this: The stars must have looked down in wonder on this brave man on that strange scene, and we know that God looked down upon it with divine approval.

As descriptive of this trip, as well as the sublime purpose of the great Columbus, the wonderful poem on Columbus from the pen of that grand old poet of the Sierras, Joaquin Miller, has always seemed to me both very beautiful as well as very appropriate. I always love to quote it, because it always seems to me to breathe the breath of faith and inspiration. Here it is:

Behind him lay the gray Azores;
Behind, the gates of Hercules;
Before him not the ghost of shores;
Before him only shoreless seas.
The good mate said, "Now must we pray,
For lo! the very stars are gone;
Brave Admiral, speak; what shall I say?"
"Why say, 'Sail on; sail on; and on!'"

"My men grow mutinous day by day;
My men grow ghastly, wan, and weak"—
The stout mate thought of home; a spray
Of salt wave washed his swarthy cheek.
"What shall I say, brave Admiral, say,
If we sight naught but seas at dawn?"
"Why, you shall say at break of day,
'Sail on; sail on; and on; and on!'"

They sailed and sailed as winds might blow,
Until at last the blanched mate said:
"Why, now not even God would know
Should I and all my men fall dead.
These very winds forget their way,
For God from these dread seas is gone.
Now speak, brave Admiral, speak and say"—
He said, "Sail on; sail on; and on!"

They sailed. They sailed. Then spake the mate:
"This mad sea shows its teeth to-night.
He curls his lips; he lies in wait;
He lifts his teeth as if to bite!
Brave Admiral, say but one good word.
What shall we do when hope is gone?"
The words leaped like a leaping sword:
"Sail on; sail on; sail on; and on!"

Then pale and worn, he paced the deck,
And peered through darkness. Ah, that night
Of all dark nights! And then a speck—
A light! A light! At last, a light!
It grew. A starlit flag unfurled!
It grew to be Time's burst of dawn.
He gained a world. He gave that world
Its grandest lesson: "On; sail on!"

THE RETURN TO SPAIN.

Six months later Columbus entered the same port amidst a halo of glory, such as had never shown around any other mortal man. Columbus advanced to court with his sailors amidst shouts and over strewn branches and garments.

The King and Queen hesitated as to whether they should receive him as a human man or as a messenger from Heaven, for Columbus came back to tell that he had sailed around to India; had opened the water route; had three strange-looking men, whom he said he had picked up off the coast of India; had redeemed the world and prepared the way for the coming of Christ. This is what Columbus always believed he had done and this is what the people for a while believed he had done. Aye, fickle fortune, this same conquering hero must come again in this same port in disgrace and in chains.

The people went wild with joy. All India is ours. Acres of jewels are ours. Everybody who could sell property sold all and put to sea, and when the spell broke saw that they had lost all. They came back paupers, their homes gone.

They sat around the court wretched indeed. When the King appeared they held up their rags and cursed the King for being imposed upon by a man whom everybody had suspected of being a fool. When Columbus's sons appeared they stoned them.

With cursing they demanded the arrest of the man whose lies had brought them from wealth to want. Isabella being dead, the weak Ferdinand yielded and signed that warrant for the arrest of Columbus, which throughout all times must ever stand a blot upon his name. But while the truth became apparent to the people, with Columbus the spell never broke. He never so much as suspected that he had discovered the great American Continent; that thought never entered his mind.

HIS GREAT BELIEF.

When we consider his great, noble conception, we see how cruel it would have been to have undeceived him. A merciful Providence, who patiently deals with all our follies, let him go down to his grave in the sublime faith that he had carried the Gospel all over the earth and prepared the world for the second coming of our Savior; that he truly was the great Christ bearer, spoken of in the Scriptures.

He required every sailor on board the ships before landing to take oath that he had been on the coast of Asia. Cuba he was positive was Japan. As he stepped upon San Salvador, he was sure that he had redeemed all Asia.

No wonder he fell prone on his face in the dust on San Salvador and gave thanks to Almighty God, who had, in Columbus's own words, "made him to conquer over his enemies and had given him India." When he saw the natives he at once said, "Here are the inhabitants of India." When he saw the rings in their ears he said, "A proof of their riches." When the natives pointed inland, said at Cabanmcan was much gold, he was sure that Cab-a-ma-can was the Indian way of saying Kublai-Khan.

Before him arose the splendor and opulence of those thousands of cities of gold, those lakes of pearls, those rivers of healing, and the coming of heaven. What a dream! How cruel to disturb the sweet joy of the sleeper. It would have been like reaching up into the skies and pulling back the glorified spirit to dull and sinful earth. He never understood how he could have deceived anyone. When he asked for his fetters, after having been carried home like a villain in chains, he said he was determined to keep those fetters as a memorial of his reward for his many services. He hung those fetters on the walls of his chamber, and six years later they were laid with him in his grave.

But the prison was not destined long to detain this great spirit. His soul was soon to become a citizen of the skies; his soul was soon to leave the world he sought to redeem and stand in the presence of the Redeemer; his soul was soon to partake of that real stream of life and find the real spring of youth and find that real youth in immortality.

COLUMBUS, THE IMMORTAL.

Carlyle says that biography is the only true history as well as the most interesting study of history. Columbus believed in the guiding hand of a divine Providence. He also believed in astrology. He believed the stars foretold for him a glorious destiny.

Who of us shall dispute his faith? Who of us shall say that he did not, like Joan of Arc, hear the silent voices speaking to the listening soul down out of the skies—voices that have ever called to duty, to service, and destiny?

Whose blood does not run faster and warmer when he reads the faith and struggles of this great man?

Christopher Columbus! The storm-tossed life over which rolled all the bitter waves of hate; against which beat all the biting winds of persecution; whose ship of life sailed every sea of sorrow, through every night of despair, without a friendly star of hope.

By his supreme faith in Providence he became the divine instrument to blaze the pathway that marks the destiny of time.

His name is revered by all mankind. The very honor of having the resting place of his mortal body has been contended for by the nations of the earth. . .

His ashes rest in America, his fame walks the pathway of the stars, and his soul rests in the presence of God.

Banking and Currency.

EXTENSION OF REMARKS
OF
HON. RUFUS HARDY,
OF TEXAS.

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, September 17, 1913,

On the bill (H. R. 7837) to provide for the establishment of Federal reserve banks, for furnishing an elastic currency, affording means of rediscounting commercial paper, and to establish a more effective supervision of banking in the United States, and for other purposes.

Mr. HARDY. Mr. Speaker, to a Member of Congress who knows full well that ever since the panic of 1907 all public men capable and desirous of thinking on the subject have been studying the banking and currency question, the delay urged by bankers for further hearing seems utterly unreasonable. It looks like the bankers design to prevent all action unless such a bill could be passed as would stultify the Democratic Party and placate the big bankers by giving them all they ask and tying the country more securely than ever to the wheels of their merciless power; that is to say, unless they could pass the Aldrich bill or one like it in substance and effect. Congress knows that the people will not stand for an Aldrich currency measure. The ridiculous reason given for urging delay is that they have not been sufficiently heard, yet since the creation of the Aldrich monetary commission and its world-wide investigations and hearings the subject has been presented from every possible angle—every possible interest has been heard from. The banking interests, big and little, have had interminable hearings. Bankers have written newspaper articles and magazine articles, and have even established publications of their own, such as Banking Reform, of Chicago, devoted to nothing but a discussion of the banking and currency question and latterly of the Glass-Owen bill. They have appeared before many committees of the House and Senate and testified at length; they have met in many conventions and made speeches and resoluted at large. Besides this, the Aldrich committee took the testimony of the managers of all the big banking concerns in Scotland, England, France, Germany, and Canada. In the name of common sense, what more information is there to gain, what more investigation to make? I do not mean what more argument and opinion may be given, but what fact connected with currency or banking is now hidden? If every fact is known and even every argument, as I maintain, has been made from one to a dozen times, what more is to be done except that the committee of the Senate which is to act must themselves begin finally digesting their own opinions, making up their own minds, and formulating their conclusions into a bill to report to the Senate? This is what, it seems to me, they ought to be doing now.

If a court trying a cause, however great, had patiently heard six witnesses on every point selected by the interests represented, had then heard six months of argument from the ablest attorneys representing every party at interest, would it not be time for the judges of that court to retire for consultation among themselves to endeavor to reach some conclusion? In reason there will be just as much ground for the full Senate, and every Member of it, asking that all these arguments be repeated before them when the committee reports as there is for the committee to go over and over the same ground. I do not charge it is the purpose, but certainly I believe the effect of much of this argument is simply to cover up and not uncover the great essential facts and reasons underlying the bank opposition to the House bill. I have before me a pamphlet review of that bill by James B. Forgan, the big banker of Chicago. It consists of some 16 pages of careful criticism and objections, yet no one reading it over would find in it any frank statement of Mr. Forgan's real and strong objections to the bill. They were stated in a newspaper interview given by Mr. David L. Forgan a week or so ago. This interview was perhaps not as deliberate as the pamphlet criticisms, but it was from the heart and brief, yet complete. It stated that the bill was undesirable to the big banks because it took away from them the three things that made the present national-bank system attractive to them. First, the Government's deposits; second, the deposits of 9 per cent of the reserves of country banks; and third, the right to control the issue of paper currency—that is, the bank notes.

The following is the newspaper interview:

BANKER SCORES CURRENCY BILL.

CHICAGO, *September 25.*

A bitter attack on the pending Owen-Glass currency bill was made by David L. Forgan, vice president of the Chicago Clearing House Association, at the opening session of the Illinois Bankers' Association to-day. He declared that if the bill becomes law every national bank in the State will be forced to do business under a State charter.

"The law," he said, "would destroy the only three advantages of national-bank incorporation—that they can hold reserves, handle Government deposits, and issue currency."

United States Senator L. Y. SHERMAN declared: "I would support a law to wind a watch with a crowbar as cheerfully as I would support any such bill."

Here is the "nigger in the woodpile," to such bankers as Mr. Forgan, in the House bill. Here is their real objection to the bill, however learnedly and long they may talk about other matters. They may seek to cover it up, but this I believe is the fact. I know these three things must be done and will be done, or we will have no banking and currency bill passed by this or any other Congress in this country. Mr. Speaker, while so many bankers are arguing I want to supplement my remarks by appending part of a letter to me from Capt. James Garitty, of my home city, and an address made by him before the Texas State Bankers' Association, at Fort Worth, Tex., June 5, 1908. I believe this address had much to do with the establishment in my State of a splendid "guaranteed-deposit" system of State banks, and I think they contain food for thought for every man who wishes to see the wisest and safest system of banking for our whole country. I append also a letter from another sound and able Texas banker, Mr. Alba Heywood, which commends the House bill in the highest terms.

THE FIRST NATIONAL BANK,
Corsicana, Tex., September 20, 1913.

Judge RUFUS HARDY, M. C.,
Washington, D. C.

DEAR JUDGE: In reply to your favor of the 15th, beg leave to say that you may be and I trust you are right in your view that the burden to the banks has been greatly exaggerated in the bill now before Congress, but whether the burden is great or small, if the bill is in the interest of and intended for the general good, we should assume it without murmuring. I await receipt of your speech on the subject, and hope that you are able to show that the country bankers can avail themselves of the discount privilege to advantage. I am thoroughly acquainted with the character of the paper held by banks outside of large centers, and believe that they hold very little of the class of paper that would be readily discounted by the regional banks. Of course, if the bank seeking rediscount privilege was quite strong in proportion to its need, it could discount any sort of paper, and it can do so to-day. What is needed is a market for ordinary paper that is good, regardless of the bank's strength. And I can not see how the regional bank will be able to pass on the value of paper only known to be good locally. The big banks in large cities handle paper that is known to the business world and will sell anywhere where money is plentiful, and such paper will, I imagine, be about the only paper that the regional banks will consider in rediscounting.

I fully agree with you on the need of some guaranty of deposits, and to show how I stand on this question inclose copy of my address before the State bankers' convention in 1908, which gives my views of the financial situation generally more fully than I could spare time to give them at present. I helped some in framing the Texas banking laws by suggesting certain rules and regulations that I foreshadowed in this address, and I sincerely believe that we have the best banking laws in the United States, if not in the world. Up to the present the guaranty fund has never cost a cent, and I doubt if it ever will. There is just one thing that I would like to see changed in our laws, and that is the minimum of capital allowed, which is $10,000. This is too small, in my opinion, and should be at least $25,000.

There is one thing in the present bill before Congress that I am glad to see, and that is that the Democratic majority seems to be thoroughly committed to the idea that all money or currency, as it is called, shall be issued and controlled by the United States Government. The banks' claim that a central or regional bank should issue the currency, and they alone be responsible for its redemption, is in my opinion unsound and dangerous. Any number of men possessing the power to increase or decrease the circulating medium at their sweet will would have a grip on the people that nothing short of a revolution would ever shake off. The currency issued by any bank or number of banks is not as good as that issued by the Government of the United States, backed by the taxing power of the country and 100,000,000 of the most prosperous people on earth, and the people generally would never have the same faith in it that they have in the present Government-secured money. * * *

Sincerely, your friend,

JAMES GARITTY.

GUARANTEED BANK DEPOSITS.

(Address by James Garitty, president First National Bank, Corsicana, Tex., before the Texas State Bankers' Association at Fort Worth, Tex., June 5, 1908.)

Mr. President and gentlemen, in advocating the guarantee or insurance of bank deposits so that every depositor will be able to get his or her money on demand from a sound or unsound bank those who know me and the bank I represent will, I am sure, give me credit for not having any interested motive in advocating such guaranty. If we had solely in view the interest of the stockholder and the amount of his dividends, it would not be the best for some banks to have all banks fully guaranteed, but it would certainly be best for the interest of the depositors who furnish the banks the money out of which dividends are earned, and in my opinion is the very best that can be passed through of late. The cause of our late panic has been fully discussed in the papers and magazines, and as is usual in such discussions there are nearly as many opinions as there are writers on this subject, but I assert, without fear of valid refutation, that the only thing that ever has or ever will start a panic is the fear of the depositor that he will not be able to get his money when he demands it. If you satisfy him absolutely that he can get his money whenever he wants it, he will never withdraw any except for actual needs, and all bankers know that such demands can be met with very little actual cash. Many men of high financial standing and authority, whom we have heretofore looked to for information and guidance in such matters, ridicule the idea of insurance of bank deposits and attack it by putting up a straw man or plan that no one advocates, then proceed to knock down him or it with ponderous figures and financial plans that none but the great captains of high finance can understand or appreciate. If the plain depositors thoroughly understood these plans, which are, as a rule, in the interest of the few who are so strong that they do not need protection, they would repudiate the plans of the high financiers as the financiers do the insurance of bank deposits. They tell us that if deposits were insured rascals would be invited to become bankers and enabled to cover themselves with a mantle of credit that they could not otherwise acquire, just as if those who advocate the insurance of bank deposits were in favor of same without any proper regulation of the banks whose deposits were insured or guaranteed. I am as much opposed as anyone to the guarantee of deposits until such reasonable safeguards are thrown around the business as will reduce to a minimum the opportunity of the incapable or dishonest to take advantage of such guaranty. We have always had incompetent or dishonest men in all lines of business and always will, but the banking laws can be easily amended so that the number under the guaranteed plan will be less instead of greater than heretofore.

In outlining and advocating a general plan of deposit insurance I believe that it is at the present time useless to enter into details, though those necessary to put the plan in successful operation would be few and simple, from the fact that the financiers who control the party in power will be able to defeat any such law until the people become fully aware of the absolute need of same and the demand for it becomes too strong for the politicians to resist. The reform in this matter—and I believe it is a most necessary reform—will probably be inaugurated by the States.

Oklahoma has started the ball rolling, and if a few more join in it will be but a short time before the Federal Government will be forced to follow suit, else all national banks will be at a disadvantage compared with State banks whose deposits are fully guaranteed. If all bank deposits were fully secured there would under the plan I advocate be no more money panics and no piling up of money in the large centers when and where it is not needed for legitimate business, but is attracted by those who furnish money to gamblers on the stock exchange. Statistics furnished by the Comptroller of the Currency show that $400,000,000 of the $700,000,000 loaned by the national banks of New York is loaned on stocks and bonds. The insurance of bank deposits is the only remedy worth mentioning for the prevention of panics, and in my opinion, the only absolute remedy that will ever be found. The Aldrich bill, the Fowler bill, the American Bankers' Association plan, a large central bank, and so forth, are palliative only. A billion or two billion dollars of emergency currency will not satisfy the demand when depositors get scared. Only one thing will suffice, and that is to absolutely satisfy the depositor that he can get his money when he wants it. You all know the old story of the man who was anxious for his money until he found he could get it, then did not want it at all. That man still keeps an account with your bank, with my bank, and with every other bank on earth. With deposits absolutely secure we have all the currency we need now or are likely to need for a long time to come, for, as Mr. Wanamaker says, there is a plenty now hid under carpets that will go to the bank when they know positively that they can get it when needed, and whenever on account of expensive business we need more the Government can and should provide and furnish it to the banks on their putting up proper collateral until same is redeemed. A late report of the Comptroller of the Currency shows that 53 per cent of the total money in the country is outside of the Treasury or banks. Money panics affect all business and all people, and though they may be short lived so far as the demand for actual cash is concerned, the bad effects on business and general prosperity often lasts for years after money is again, as at present, plentiful. Insurance of bank deposits is the only thing that will absolutely prevent panics, and it appears to me to be the height of selfishness on the part of large and strong banks to object to the absolute security of all banks, so far as deposits are concerned, for the reason, as they say, that it would reduce all banks to a level—the weak and incompetent the same as the strong and well managed. As a matter of fact, it would not do so, because the large banks will still have the advantage under the plan I advocate of larger deposits and larger loans, just as it has now; but if it did reduce all banks to a level, which it will not, the duty we all owe to the country at large and the special duty that we owe our depositors—the people who furnish us a living—should make all of us advocate the absolute guaranty of every dollar that is deposited in a bank. This guaranty would cost the banks very little. Indeed, forty-odd years of experience with national banks prove that one-twentieth of 1 per cent of the average deposits has heretofore covered all losses, and under the guaranteed plan it would be much less, less than most banks pay for advertising alone and less than one-tenth of the amount banks pay for interest on balances payable on demand. Have you, my fellow bankers, ever thought in connection with this question that you are, with few if there are any exceptions, depositors yourselves in other banks, and however careful you may be at home you are to some extent dependent on the solvency of many other banks for the protection of your depositors and stockholders? How comforting it would have been to know during the height of our late unpleasantness that all your correspondents were insured and you could get your balance whenever you ordered it. Every bank in the United States had the same tired feeling, and even the New York banks had, no doubt, money with other banks about which they had, to say the least, some anxiety. Even big names and big capital will not give depositors the feeling of absolute security such as insurance of deposits will.

When the ild was on, the best institutions in the country were looked on with more or less suspicion; and, if the truth must be told, banks were more scared of one another than the depositors were of them, perhaps because we were better posted than the ordinary depositor, if not more suspicious.

They say it is rank communism to tax good banks for the faults and ignorance of bad ones, yet we tax ourselves to provide a police force to protect us against crime and violance; a school tax for educational purposes; taxes for roads, bridges, canals, and so forth; and no one thinks it communism. Then why is it communism to tax banks for the protection of the people out of whom they make their living and to whom in justice, to say nothing of gratitude, they owe everything that can possibly be done for their protection? The matter of deposit insurance is so plain, simple, inexpensive, and desirable in every way that it seems to me little short of a crime to deny our depositors, the people out of whom we make our living, what they are justly entitled to, what they have a right to demand and will demand before long—a demand we should be foreseeing enough to meet before it is forced on us. If it is wrong to tax us in order that our deposits be secured, the United States Government is indirectly doing that very thing to-day. The 100 per cent liability of shareholders, restricting loans to 10 per cent of capital and surplus, amount of reserve to be held at all times, examinations by expert accountants, and frequent statements published under oath—all these matters are a partial guaranty to depositors, and are paid for by the banks, just as the full guaranty would and should be paid for.

In addition to the laws and regulations governing national and other banks at present, I would suggest the following:

1. Strict and frequent examinations by expert examiners.
2. Insured banks to pay no interest on uninsured deposits.
3. Total amount of loans, investments, or liabilities of any character whatever to never exceed from six to ten times the capital paid in.
4. Total reserve to be kept at home.

This would, I believe, make our system of banking the strongest in the world, would bring out every dollar now kept in hiding, and cost next to nothing. The amount of tax or fund to be raised in the beginning in order to put the plan in successful operation is a question of detail, but the States or the United States should be custodian of such fund, and the fund should be large enough at the outset to dispel all doubts on the part of the public.

The insurance of bank deposits is practically a mutual insurance, to which all banks should contribute in proportion to the amount that depositors trust them with; and in this connection I wish to call your attention to the great saving in such insurance as evidenced by the lumberman underwriters' insurance of this State. I am told by one of the members that this insurance has only cost them to date about 15 per cent of the current rate charged by regular insurance companies, and the rate now charged by regular companies is much less than it used to

be on account of the mutual insurance. This goes to show how little the insurance of deposits will cost the banks, and since it is not only a patriotic duty that we owe to the whole people, but a special duty that we owe to the people who trust us with their money and look to us for protection, I hope the time will soon come when to say you have money in the bank means that you have money that is absolutely safe so far as human endeavor can make it.

I ask from this body, most of whom are young men engaged in a business that from an ethical standpoint should occupy a higher plane than any other business, a due and careful consideration of the justice and equity of this plan, and I want to impress upon you not only the desirability of it from a business standpoint but the absolute right of the depositor to insist on such guaranty. I know that this plan will not be favored by the captains of industry and the great moneyed institutions that attract money by the magnitude of their capital, for when all banks are absolutely secure the crossroads bank will have the same power of attraction that big banks have up to the limit allowed by law; and they should have it, for, as a matter of fact, the small bank is often the safest and strongest so far as ability to meet liabilities on short notice is concerned. No bank should be allowed to do business unless it is willing and able to pay the small amount that it would cost to absolutely insure and guarantee their deposits, and the depositor in the smallest bank should feel as secure and be as secure as if his money was in the Bank of England or France.

In my opinion there is no question about the desirability of deposit insurance for all banks, and the only question is, Can it be accomplished without undue expense to the sound and well-managed banks? The record of our national banks operating under the national-bank laws for over 40 years goes to show that it can be done at a very small expense, and with some change in these laws, such as I have suggested, the expense will be less. Then, why hesitate to advocate and insist on this reform which will cost so little and be of immense advantage not only to the country at large, but especially to the people who furnish the money out of which all banks and bankers earn sales and dividends? Banks that loan money to merchants or others who have perishable property insist on same being insured for their protection, then why not be willing to insure for the protection of the people who loan you their money without interest and on whom your success or failure depends?

In conclusion, I beg leave to submit some of my reasons for the changes that I suggest in the present laws and regulations governing national and other banks when deposits are guaranteed or insured. They are not by any means all the good reasons that can be given, but enough for the present.

1. Strict and frequent examinations by expert examiners.

Bankers and those who have a thorough knowledge of the cause of bank failures agree that in nearly every case the cause of failure is attributable to the misconduct of officers and directors, and strict and frequent examinations will eliminate to a great extent the people who are guilty of such misconduct. The law should be made plain and rigidly enforced.

2. Insured banks to pay no interest on insured deposits. Why? Because there will then be no inducement for depositors to put their money in a bank that has been organized more for the purpose of borrowing money than to transact a legitimate business in the interest of the whole community.

3. Total amount of loans, investments, or liabilities of any character whatever to never exceed from six to ten times the capital paid in. This will prevent reckless and excessive loans and investments—the cause of nearly all failures—by banks that have not sufficient capital to stand such losses. An individual or a bank has the right to risk their own money in whatever way they see fit, but have no right morally, and they should be denied the legal right to so risk other people's money. If such a law was rigidly enforced, there would be very little loss to the guaranty fund. I have probably made the figures too high, since the reports of the Comptroller of the Currency show that the total liabilities of all national banks in proportion to capital is only about 5 to 1, but this is a matter of detail that can be worked out by the expert, whose figures should be based on past experience. What I wish to emphasize is that a bank should never be allowed to hold or invest the money of depositors beyond a safe limit and in proportion to its actual capital paid in. In other words, the stockholders would have to lose a large proportion of such risks before the guaranty fund would lose any. It is dangerous for a bank to have deposits out of all proportion to capital, and should be stopped by law.

4. All reserve to be kept at home.

Reserve should be kept at home because the reserve in other banks is in times of stress no reserve at all. During the late panic what good was your reserve in other banks? You could not get a dollar of it. Your depositors knew this also, and it made them all the more anxious for their money. Only banks who were farseeing enough to keep a large cash balance at home were able to continue business without restricting withdrawals. Keeping a large part of your reserve in other banks has a tendency to pile up money in the money centers, and there is where panics invariably start. The failure of reserve banks to respond to the demands of their correspondents caused nearly all other banks in the country, though they were perfectly sound, to suspend payments or limit them to an amount that was the same as suspension. Again, when a large portion of reserve is kept in other banks, published statements are misleading, for where a dollar is drawn out of the country bank it diminishes the reserve the same amount in two or three other banks where reserves are kept.

Cash and only cash should be computed as reserve. Reserve cities, where the reserves of the country bank are kept, all have clearing houses, and I believe the department allows such banks to count checks on the clearing house as reserve. Such checks may mean cash or may mean nothing. Banks in such cities often have checks on each other amounting to hundreds of millions; and if all is counted as reserve, when said checks are handed over to the respective banks by the clearing house there may be a complete offset and no money coming to any of them. Then where is the reserve so counted? They say that they have paid off so much of their liability with the checks they have on the other banks, which is true, but it does not show the true proportion of reserve to liability, since $1 of reserve stands for $4 of liabilities.

I am not acquainted with the way in which the great banks of the world outside of the United States do business, but I am satisfied they do not count as reserve deposits in or drafts on other banks, but money only. On the other hand, the department does not allow our national banks to count national-bank notes as reserve, though they are just as good as any other kind of money in circulation and should be so counted. In my opinion the insurance or guarantee of bank deposits is the most important question that the banks and bankers of this country have ever had before them for consideration, and I hope and trust that this body will give the matter due consideration, and that their decision will be such as will benefit the whole people without doing injustice to anyone.

—

SAN BENITO BANK & TRUST CO.,
San Benito, Tex., September 25, 1913.

HON. RUFUS HARDY,
House of Representatives, Washington, D. C.

MY DEAR SIR: I am writing you to urge the early passage of the currency bill, and to urge that it be passed as near as possible in its present original form with as few amendments as possible.

I believe that the bill is the best work of the committee, and it is the nearest what we want of anything that could be devised at this time. I feel that any change in it would be a compromise of principles, and we hope for as few of them as possible.

Congress has done such splendid work on the revision of the tariff that we are all proud of it, and, like President Wilson, we feel that to make the tariff bill more effectual the passage of the currency bill is necessary. Personally I deem it vitally more important. I would have been glad to have seen it passed first.

The present financial system, or lack of system, is so vicious, illogical, inconsistent, and detrimental to the progress of the business of this Nation that it should be corrected at the earliest possible date.

I hope you will pardon me for presuming to write this appeal to you, but having to do with finance (even in the small way that I have had to do with it) I realize the need of this change.

With President Wilson in the saddle and Secretary Bryan leading the Democratic donkey, we people down here sleep soundly every night.

Yours, most sincerely. ALBA HEYWOOD,
President.

Why Our Foreign Trade is Growing.

EXTENSION OF REMARKS
OF
HON. RICHARD W. AUSTIN,
OF TENNESSEE,
IN THE HOUSE OF REPRESENTATIVES,
Friday, October 17, 1913.

The House granted Mr. AUSTIN leave to extend his remarks in the RECORD on "Why our foreign trade is growing."

Mr. AUSTIN. Mr. Speaker, I submit, on the subject named, an address delivered by Mr. James A. Farrell, president of the United States Steel Corporation, before the Fourth Annual Convention of the American Manufacturers' Export Association, held in New York City on September 25, 1913. This address will be of interest and value to all Americans who rejoice in the extension and growth of our trade in foreign markets. Mr. Farrell is the best-posted man in the United States on this subject. Prior to his election as president of the United States Steel Corporation he was for many years at the head of the export department of that great corporation, and it was due to his able and efficient management that our iron and steel exports have so greatly increased, until last year they amounted to $304,605,797, out of a total of $1,187,000,460 of manufactured exports. Mr. Farrel has spent several years abroad in studying industrial conditions, investigating the methods of foreign manufacturers and exporters, and is to-day, in my judgment, the best-informed man in America on the tariff and on our opportunities for the extension of trade in foreign lands.

In this connection it is not out of place to state that the splendid record of our increase of sales last year in foreign markets was under the much-abused Payne-Aldrich tariff law.

The following is the address referred to:

"Gentlemen, the American Manufacturers' Export Association includes within its membership representatives of many of our country's industrial enterprises. The manufacturers of the United States are looking beyond its borders for markets wherein they can profitably dispose of their manufactures; and commensurate with our position as one of the foremost producing nations, substantial progress is being made, one reason being the improvement in quality and character of our produce as a result of systematic study of the requirements of foreign markets, thereby creating a permanent basis for a wider expansion of our already important commerce.

"The growth of our country's foreign trade furnishes a striking example of what can be accomplished by adapting our products to the requirements of over-sea markets. We have the courage and enterprise to compete with older manufacturing countries, and our banking and manufacturing institutions are acquiring a knowledge of the opportunities in foreign markets; and as a result of the increased efficiency of the productive establishments of the country, capacity for organization, and commercial development, American manufacturers are achieving success in foreign fields.

"Those engaged in conducting an export business appreciate the difficulties and almost insurmountable obstacles to be overcome. However, they are not insuperable, and it is largely a question of adapting ourselves to prevailing trade customs, complying with requirements, adopting current systems of weights and measures, furnishing goods such as the buyer is accustomed to receive, and selling at competitive prices in the currency of the country to which the goods are shipped. These are some of the fundamentals to be considered in establishing a foreign trade.

"The struggle for a foothold in foreign markets presents many difficulties, but effort, if sustained, is eventually rewarded. England, at the zenith of her industrial career, is strong and powerful; Germany, with her wonderful facilities, is a leader in the struggle for commercial supremacy; Belgium exports over half of her production and France is increasing her foreign trade; Russia, with her vast territory and uncounted population, has to be reckoned with; Japan does not buy anything abroad which can be produced in her own country, but is producing largely for sale to other countries. If the United States is to occupy the place for which the bountiful resources of nature and the efficiency of her people have equipped her, the intelligence, enterprise, and cooperation of the people and Government must be applied to maintain and strengthen her position.

"The export commission merchants are valuable mediums to manufacturers. They are arteries, so to speak, with facilities in various markets, and their contact with buyers in distant countries insures constant knowledge of trade conditions. Selling and distributing is of paramount importance. The manufacture of goods is usually simpler than the determination of the proper channels through which to sell them, and the human factor and not alone the goods offered, is frequently responsible for results. The goods must be right, of course; but as a large percentage of exports is consumed by people whose ideas and requirements differ from ours, the proper effort must be made to reach and interest them.

"The motto of the American Manufacturers' Export Association is 'to foster and promote foreign commerce.' It is a representative commercial body, whose influence is expanding in the development of foreign trade. It is the aim of its officers and members to make it a useful and important factor in building up and increasing the exports of American manufactures and in advancing the commercial interests of our country. Its members come directly in contact with the markets of the world, and by dealing along broad lines and by showing each other the best that is in us a spirit of mutual helpfulness is cultivated in our commercial intercourse in the largest possible exchange of trade with other nations, which makes for industrial prosperity.

"To reach the goal for which we are striving it is necessary to acquire a knowledge of the requirements of foreign markets, and, while the problems are many, American manufacturers are making substantial progress in this direction. It is not by isolation that results are accomplished, hence the cooperative spirit manifested by the members of this body through interchange of ideas regarding matters of common interest.

"Its members are devoting their best efforts to the development of closer commercial relations between the United States of America and other nations. We belong to a class whose minds are open to the lessons of the world's progress. We are a nonpartisan organization, and consequently are able to deal with matters on an impartial basis.

"The members of this association represent industries located throughout the country, therefore any increase or expansion of foreign trade is considered a common growth and a common prosperity, irrespective of the class of goods, the size of the industry, the locality from which the business originates, or the port of clearance from which the products are shipped.

"The function of the association is to impart to its members, regardless of locality or size, such facts as are ascertainable with respect to foreign-trade opportunities and to assist each other in their efforts to increase business in foreign markets. It has been the fashion to criticize export methods, and there are, doubtless, cases deserving criticism; but my observation, extending over many years in the export business and based on direct personal acquaintance with the world's markets, warrants the statement that the products of our country and our methods of doing business are equal to, and in many cases superior to, the products and methods of our European competitors.

"By the use of special machinery capable of producing material which meets the diversified requirements of export markets, by the utilization of inventions, experiments, and improvements, American manufacturers are increasing the efficiency of their plants and are entering an era of expansion in the foreign commerce of the country. This is reflected in the large increase during the past few years in the exports of manufacture and equally large decreases in the exports of unmanufactured products.

"During the fiscal year ended June 30, 1913, our total exports of domestic merchandise were $2,428,506,358. This amount included foodstuffs, crude, $181,693,263, about 7½ per cent; foodstuffs, partly or wholly manufactured, $320,401,482, about 13 per cent; manufactured goods, $1,187,000,000, about 49 per cent; cotton and other crude materials for use in manufacturing made up the balance. The balance of trade in our favor for the year amounted, in round figures, to $653,000,000.

"That American manufacturers have made and are making progress is manifest. Time does not permit of a summary of these assuring evidences, but a few items are worthy of mention.

Exports of domestic manufactures, not including foodstuffs, partly or wholly manufactured, 1913.

Agricultural implements	$40,572,352
Cars, carriages, and other vehicles, and parts of	54,585,888
Chemicals, drugs, dyes, etc	26,574,519
Copper, manufactures of	140,164,913
Cotton manufactures	53,743,977
Fibers, vegetable, manufactures of	5,267,566
India rubber, manufactures of	10,963,946
Iron and steel manufactures	14,324,894
Leather and manufactures of	304,605,797
Naval stores	63,893,351
Oils, refined mineral	26,471,292
Paints, pigments, and colors	129,666,992
Paper and manufactures of	7,681,938
Paraffin and paraffin wax	21,779,303
Soap	9,679,273
Wood manufactures	4,629,567
Miscellaneous	111,255,125
	161,141,764
Total	1,187,000,460

"The older manufacturing nations are well intrenched in foreign markets, but that we are making headway is indicated by the fact that the total value of our exports of domestic merchandise for the 12 months ending June 30, 1913, exceeded by $258,000,000 our exports for the preceding fiscal year. These figures represent an enlargement of the foreign trade of the country; means of communication between the United States and foreign markets are being improved and increased.

"The growth of our export trade has resulted during the past few years in the establishment of several additional lines of steamers to Latin-American and other foreign ports, where insufficient facilities previously existed, and the continued increase in trade should be accompanied by a corresponding enlargement of ocean transportation facilities. American manufacturers suffer to a less extent than formerly in the matter of adequate shipping facilities, and while more frequent opportunities exist from European ports, it is chiefly because the business exists; and while lower freights are obtainable in some instances, steamship owners are gradually realizing that rates from the United States must be on a parity with those from Europe.

"Opportunities for commercial expansion in foreign countries exist, and while the field is largely occupied by European nations, the demands are large and opportunities many and what other nations have done the United States can do. As a rule, we are intent upon being merchants rather than investors, and up to the present investments of American capital in foreign countries have been of a limited character. Our capital has been employed at home rather than abroad, and when it is considered that England's investments in railways and industrial enterprises in Argentina alone yield $250,000,000 annually in interest return, it explains to some extent the hold that Europe has and will have for many years on business in various consuming markets.

"South American countries sell us annually nearly twice as much as they buy from us. Our Government furnishes facilities through consular reports, but the individual manufacturer must make an intelligent study of the requirements of the trade, since the efforts of consuls and commercial agents of the Department of Commerce are of little avail unless supported by individual action.

"The Department of Commerce is to be commended for its study of business and economic conditions prevailing throughout the world, and its daily bulletin of Consular and Trade Reports bring large numbers of trade opportunities to the attention of American manufacturers. The branches of our Government concerned with foreign commerce display a keen interest in its development.

"Our Consular Service is a valuable help to the exporter. Its efficiency is increasing, and the sincerity of consular officers

and the interest taken by them in extending trade has enabled American manufacturers to secure information of a reliable character. The retention of competent and experienced consular officials in the service is encouraging. The Pan American Union has rendered invaluable assistance to merchants, manufacturers, and producers, and through its efficient staff has done much to foster friendly relations between the Republics of North and South America.

"The importance of this association can hardly be overestimated as a factor in the economic development of the country. It deals with the multitudinous detail incident to exports and discusses matters of vital interest to American export trade. Dissemination of information, interchange of ideas, and cooperation tend to stimulate an intercourse which is of material as well as of educational value to its members, and place our manufacturing industries upon a more intelligent basis to meet the commerce of the world.

"The assembling of this body, comprising, as it does, manufacturers from nearly all of the States of the Union engaged in the manufacture of a great diversity of product, takes place at a time when the mind of the country is interested in the near approach of the opening of the Panama Canal, which will give an impetus to American trade and awaken the manufacturing, industrial, and agricultural interests of our country to the commercial possibilities not only in Pan America but in many other consuming markets."

Speaker of the National House of Representatives.

EXTENSION OF REMARKS

OF

HON. JOE J. RUSSELL,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Monday, October 20, 1913.

The House granted Mr. RUSSELL leave to extend his remarks in the RECORD by inserting the speech made by him before the Democratic caucus, Wednesday, March 5, 1913, placing in nomination Hon. CHAMP CLARK for Speaker of the National House of Representatives.

Mr. RUSSELL. Mr. Chairmnn and gentlemen of the caucus, the pleasant duty has been assigned to me by the Democratic members of the Missouri delegation to present to this caucus as a candidate for Speaker of the Sixty-third Congress Missouri's best beloved and most distinguished son.

This privilege is to me a labor of love, made so by a lifetime of warm personal friendship, and doubly so by reason of the fact that 24 years ago he performed a like service for me in the legislature of the State from which we come, but especially so because of his peculiar fitness for the Speakership and his distinguished services to his party and his country.

You ask me from whence he comes. I answer that he comes from the heart of the Mississippi Valley, that produces three-fourths of the foodstuffs that feed the Nation and that furnishes the great majority of the farm products that are exported to other countries. He comes from the imperial State of Missouri, the wealthiest and the most populous of the 13 States carved out of that great domain known as the Louisiana Purchase, acquired through the wisdom and statesmanship of Thomas Jefferson, the founder of the party we all love. He comes from one of the wealthiest and most enlightened districts represented in the American Congress, bordered upon the south by the Missouri River and upon the north and east by the Mississippi—a district that he has long honored by his faithful services as its Representative and a district that will continue to honor him, without Democratic opposition, as long as he lives, unless he should be promoted by his countrymen to a place of higher honor in his country's service.

You ask me if he is worthy of this distinction. I point you to his life's history. First as a farmer's boy, later as a clerk in a store, teacher, country editor, city attorney, prosecuting attorney of his county, member and leader of his party in the Missouri State Legislature, 18 years' service in Congress, and in the last Democratic national convention receiving on nine ballots a majority vote for nominee of that great party for President of the United States. Any American boy of humble birth who by his own ambition, his own industry and efforts, accomplishes so much is worthy of any honor our party or our country can bestow.

You ask if he deserves this honor at the hands of the Democratic Party. I point you to his lifetime of faithful and uninterrupted services to that party by pen, voice, and vote and his unwavering devotion to its principles. He has made more speeches in more States in support of his party, its platforms, and candidates, with one exception, than any other man living or dead.

You ask me if he is capable. I point you to his well-known ability as a Member of Congress, and to his invaluable services as the leader of our party in the Sixtieth and Sixty-first Congresses. He did more than any other one man to bring together all the Democratic Members of Congress into one united and harmonious body that contributed so much to the election of a Democratic House, to be followed by our great national victory, and the election to the Presidency of the able and brilliant Woodrow Wilson.

I point you to his record as Speaker of the Sixty-second Congress that has won for him the plaudits of the American people, and the confidence, the respect, and the universal praise of the entire membership of this House regardless of political affiliations.

You do not ask me if he is honest. The world knows that. During his public life of almost a quarter of a century no man, either political friend or foe, has charged, or even insinuated, that he has ever been insincere, unfaithful, or dishonest, and no one in public life has ever more perfectly had the confidence of the whole people. His private life is spotless, his fidelity to his public trust is proverbial, and his public life is free from blemish or reproach. He loves his friends and trusts them with perfect confidence, and never doubts their sincerity or loyalty until their disloyalty has been established by a positive injury.

As a presiding officer he is able, just, and impartial. On one occasion in rendering a decision from the chair he said that when he finally lays down the gavel as Speaker of the House he would rather have it said of him that he has been the fairest Speaker who has presided over the House than that he has been the greatest Speaker.

Mr. Chairman, without underestimating the good qualities or the abilities of the many great men who have preceded him as Speaker, I can with perfect confidence say that his name will go into history both as one of the *fairest* and as one of the *greatest* Speakers that has ever filled that high and honorable office.

I esteem it a great privilege, as it is to me a great pleasure, to nominate as the choice of this caucus for Speaker of the Sixty-third Congress CHAMP CLARK, of Missouri.

The late John Fletcher Lacey.

REMARKS

OF

HON. SANFORD KIRKPATRICK,

OF IOWA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, October 16, 1913.

The House granted Mr. KIRKPATRICK leave to extend his remarks in the RECORD relative to the services of the late Hon. John F. Lacey, who served as a distinguished Member of the House for 14 years.

Mr. KIRKPATRICK. Mr. Speaker, it is with profound sadness that on this occasion I place, as it were, a flower of love and reverence on the newly made grave of a man who for 18 years occupied a seat as an honored Member in this Chamber.

If heroic deeds were roses, then we could build and decorate therewith a triumphal arch all along the pathway of his eventful life—and best and most of all, he was an honest man.

I refer to John Fletcher Lacey. Doubtless he had enemies, and by his strict adherence to duty as he saw it he may have added others. Even the Son of Man in his advocacy of human rights and the plan of salvation became a martyr. In his heart there had been reared a temple of truth, and his lips, now cold in death, were the oracles of his greatness.

I am pleased to note that to-day I am the duly accredited Representative of the congressional district that once heralded the name of Lacey at its masthead.

He was born in Virginia in 1841. At the age of 14 he moved to Iowa, attended the common schools, and pursued classical studies. He studied law, was admitted to the bar, and at once took rank in the forefront of his chosen profession. He enlisted in Company H, Third Iowa Infantry, in May, 1861, and again in Company D, Thirty-third Iowa; was made assistant adjutant general on the staff of Gen. Samuel A. Rice and subsequently promoted as a staff officer with Maj. Gen. Steele.

As a Member of Congress he was a constructive legislator.

From an humble cottage nestled among the Virginia hills he made his way to the Capitol of the Nation. In the forum of debate but few were able to withstand his shafts of repartee or resist the forceful logic of his eloquence.

Nations do not always lose by the loss of rulers, and while the light and life of this great man have gone out from among us, still his example and influence for good will live forever.

I am to mourn with those who lament his death, for his life was a burst of sunshine. I knew him as a comrade in war and a brother in peace.

In the triumph of an eventful and well-spent life the summons came, and the bugle blast that called him to arms has since reverberated back in the melody of a trumpet, summoning him beyond the veil which separates all earthly vision from the paradise of God.

Frankford Arsenal Economies.

EXTENSION OF REMARKS

OF

HON. J. HAMPTON MOORE,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, October 31, 1913.

Mr. MOORE. Mr. Speaker, under the skillful management of the Bureau of Ordnance, War Department, the Frankford Arsenal, Philadelphia, has made a record for efficiency and economy which ought to receive substantial recognition at the hands of Congress. As at present conducted, the arsenal is one of the real money-saving—which is money making—establishments of the Government. It is practically indispensable to the country; and yet for many years its great work of producing small-arms ammunition for the Army and the Navy has been performed in buildings the inadequacy of which would not be tolerated in private plants and on grounds the limitations of which are perceptibly inferior to the standards set by the Government's competitors.

So urgently, indeed, do the needs of this famous old servant of the United States stand out to every visitor; so important to the Government has it become that new and modern structures shall be provided and more ground acquired to safeguard the life and property employed in the daily operation of the works that I have asked permission to place in the RECORD some of the salient facts with regard to the arsenal's history and national usefulness.

The statement herewith submitted has been prepared with great care and embraces much interesting and valuable information culled from official sources. To students of the problem of government efficiency in the manufacture of Government supplies it is a forceful presentation. To those who are watching the trend of Government expenditures and economies it is a revelation:

SUPPLIES BOTH ARMY AND NAVY.

1. The Frankford Arsenal was established in 1814 and formally opened in 1817 by President Madison. It manufactures principally all the small-arms ammunition used by the Army, Navy, and Organized Militia of the United States; the greater part of the artillery ammunition used by the Army, and nearly all the fire-control instruments, sights, etc., used by the mobile and seacoast artillery.

2. The Frankford Arsenal is located in the northeast section of Philadelphia, at the junction of the Delaware River and the Frankford Creek. The arsenal is 500 yards from the main line of the Pennsylvania Railroad between Philadelphia and New York. It is also located at the terminus of one of the important street railroad lines of the city and within about 20 minutes' walk of the Frankford Station of the Philadelphia & Reading Railroad. Its location places it in one of the most important industrial centers of the United States and makes it easily accessible to all parts of the city.

3. The Frankford Arsenal has a more economical location than any other. Its location in the city of Philadelphia makes it easily accessible for 250,000 skilled workmen living therein. It is within 275 miles of the soft-coal fields of Pennsylvania, from which it procures its fuel; within 150 miles of Connecticut, from which it draws its brass for manufacturing purposes; within 57 miles of Bethlehem, Pa., 58 miles of Reading, Pa., and 350 miles of Pittsburgh, Pa., and within the city of Philadelphia, from which it draws its steel for the same purpose; and within 30 miles of Carneys Point, N. J., and within 136 miles of Picatinny Arsenal, N. J., from which it procures its explosives for manufacturing ammunition.

4. The favorable location of the Frankford Arsenal for manufacturing purposes was recognized as early as 1875 by a board of ordnance officers, which recommended at that time that the Frankford Arsenal be enlarged and about 75 acres of additional land be purchased for this purpose. The advantages which have made Philadelphia the greatest manufacturing city in the country obtain equally well with regard to one of its leading manufacturing establishments—the Frankford Arsenal.

5. The Frankford Arsenal is the second largest arsenal, being exceeded by the Rock Island Arsenal.

6. The value and variety of its manufactures are believed to be greater than those of any other arsenal.

7. It has the best transportation facilities of any arsenal. It has direct railroad connections with the Pennsylvania Railroad, and owing to Philadelphia being a great railroad center it can obtain a supply of appropriate cars for any purpose with the utmost dispatch. The arsenal has a dock on the Frankford Creek—which is not a creek at all, but a navigable inlet of the Delaware River—so that shipments may be made by barges, thus making connections with other railroad lines. It has unfortunately no available frontage on the Delaware River.

8. Frankford Arsenal has the least acreage of any manufacturing arsenal. For every acre it has an output of $37,400 of manufactures, which is much greater than that of any other arsenal. The estimated value of the Frankford Arsenal is about $3,500,000.

9. The striking economies of the Frankford Arsenal as a manufacturing establishment are fully set forth in the attached tabulation. It will be seen from the statements contained in these tabulations that the Frankford Arsenal will save on existing orders for manufacturing ammunition nearly $980,000 as compared with the prices charged by private manufacturers. If the arsenal had sufficient capacity for all the orders given for artillery ammunition it would have made an additional saving of over $312,000. In the manufacture of small-arms ammunition last year it effected a saving of over $610,000 as compared with the prices paid private manufacturers. The Frankford Arsenal, therefore, on the orders executed last year for small-arms ammunition and on orders that will be executed this fiscal year on artillery ammunition will effect a saving to the United States Government of nearly $1,590,000. The Frankford Arsenal therefore pays for itself every two and one-half years.

10. The economies referred to in the preceding paragraph and described in the attached detailed statements are not all of the savings resulting to the Government from having the Frankford Arsenal, for that establishment in addition utilized during the last fiscal year nearly $221,000 worth of scrap materials received from military and naval sources in its manufacturing operations, and, furthermore, utilized surplus stock on hand to the value of over $160,000, thus making an additional saving of over $380,000, or a grand total saving in appropriations made by Congress of the magnificent sum of approximately $1,970,000.

STRIKING ECONOMIES SHOWN.

The tabulated statements which follow show the savings made at the Frankford Arsenal in the manufacture of artillery ammunition and small-arms ammunition when comparison is made with the latest contract prices for the same articles procured from outside manufactures; and these statements also show the additional savings that would be made if the Frankford Arsenal had the capacity to manufacture the articles of artillery ammunition so ordered from outside manufacturers.

It must not be overlooked that the Frankford Arsenal manufactures in quantity other articles of artillery ammunition which are not procured from outside manufacturers, and, therefore, in such case comparison of cost can not be made and no savings reported.

The contract cost of finished shrapnel-case forgings for the 3-inch gun and of a limited number for the 4.7-inch gun comprise the cost of the shrapnel-case forgings as procured from the outside manufacturer and the additional arsenal cost of machining them, so as to place the finished shrapnel case in the same condition as the corresponding shrapnel cases manufactured at the arsenal, for otherwise in these cases no comparison of cost can be made.

The total arsenal costs include 15 per cent to cover administration, depreciation, insurance, and interest charges. The contract cost includes 3 per cent, which is added to the contract price, to cover the cost of inspection, such as compensation of inspector, cost of conducting firing tests, and so forth.

TABLE I.—*Manufacture of artillery ammunition.*

[Statement of total arsenal costs and total contract costs for ammunition being manufactured at the Frankford Arsenal and provided for in orders issued between July 1, 1912, and Apr. 25, 1913, and which will be completed by June 30, 1914.]

Articles.	Quantities under manufacture.	Total arsenal costs per unit.	Aggregate total arsenal cost.	Contract price per unit.	Contract cost per unit.	Total contract cost.	Saving over contract costs.

4.7-inch common steel shell	10,605	12.46	12.83	136,062.15	8.30	88,021.50	48,040.65
6-inch common steel shell	7,077	17.93	18.47	130,712.00	16.75	118,539.75	12,172.25
3-inch fixed high-explosive shrapnel	10,000	13.17	13.17	131,700.00	10.15	101,500.00	30,200.00
Grand total contract cost							$1,112,334.95
Grand total arsenal cost							800,120.11
Loss							312,214.84

TABLE III.—*Manufacture of small-arms ammunition.*

[Statement of total arsenal costs and total contract costs for ammunition manufactured at the Frankford Arsenal provided for in orders issued and completed between July 1, 1912, and June 30, 1913.]

Articles.	Quantities manufactured.	Total costs per thousand.	Aggregate total cost.	Contract price per thousand.	Contract cost per thousand.	Total contract cost.	Saving over contract.
Caliber .30 ball cartridges	55,000,000	$27.08	$1,489,400	$37.77	[1] $38.09	$2,094,950	$605,550
Automatic pistol ball cartridges	5,000,000	16.28	81,400	18.72	18.80	94,000	12,600
Caliber .38 revolver ball cartridges	7,000,000	12.39	86,730	10.91	11.27	78,890	−7,840
Grand total, contract cost							$2,267,840
Grand total, arsenal cost							1,657,530
Saving							610,310

[1] This cost includes the actual cost of inspection.

TABLE IV.—*Purchase of small-arms ammunition.*

[Statement of total contract costs and of total arsenal costs for ammunition purchased from outside manufacturers covered by orders given between July 1, 1912, and June 30, 1913, under which deliveries were completed before Aug. 29, 1913.]

Articles.	Quantities ordered.	Contract price per thousand.	Contract cost per thousand.	Total contract cost.	Arsenal cost per thousand.	Total arsenal cost.	Contract cost over arsenal cost.
Caliber .30 ball cartridges	8,000,000	$37.77	[1] $38.09	$304,720	$27.08	$216,640	$88,080
Automatic-pistol ball cartridges, caliber .45	800,000	18.72	18.80	15,040	16.28	13,024	2,016
Caliber .38 revolver ball cartridges	1,000,000	10.91	11.27	11,270	[2] 12.39	12,390	−1,120
Grand total contract cost							$331,080.00
Grand total arsenal cost							242,054.00
Loss							88,976.00

[1] This includes the actual cost of inspection.

[2] The increased cost of caliber .38 revolver ammunition is due to the fact that the presses on which it is partly made are not equipped with automatic feeds, which was not done because of the probability that very little of this ammunition will be made in the future.

RECAPITULATION.

FRANKFORD ARSENAL MANUFACTURE.

Artillery ammunition, saving	$979,840.94
Small-arms ammunition, saving	610,310.00
Aggregate saving	1,590,150.94

CONTRACT MANUFACTURE.

Artillery ammunition, loss	$312,214.84
Small-arms ammunition, loss	88,976.00
Aggregate loss (the difference between the cost of the ammunition as manufactured by outside contractors when compared with what it would have cost had it been manufactured by the Frankford Arsenal is represented as a loss. Strictly speaking, this loss, or excess cost, also represents the amount that the Government pays for such ammunition, so that in time of war outside manufacturers may be in a position to supply ammunition)	401,190.84

NEEDS OF THE ARSENAL.

An inspection of the Frankford Arsenal has been made by Members of Congress, by members of the State legislature, and by other public men interested in the activities of the Federal Government, and they have all recognized the principal needs of the Frankford Arsenal and appreciated the necessity of making appropriations to meet these needs. Certain members of the State legislature were so impressed by the necessity of making appropriations to the Frankford Arsenal that through their efforts joint resolutions were passed by the State legislature and signed by the governor, requesting the members of Congress from Pennsylvania to exercise their best efforts toward securing appropriations for the purchase of an adjoining tract of land and for the construction of a high explosive loading shop.

The principal needs of the Frankford Arsenal are described below, but the language employed, while convincing, can not possibly impress the reader as would a personal inspection of the establishment.

1. INCREASED FACILITIES FOR THE MANUFACTURE OF ARTILLERY AMMUNITION.

The extent of the orders for the manufacture of artillery ammunition involves the employment continuously of two shifts, and on certain operations three shifts, in order to complete the order by the time specified by the War Department. It is generally considered that a plant at a manufacturing arsenal is inadequate when it is necessary to employ more than one shift except in time of war. A plant which requires the employment of extra shifts in time of peace to provide for the orders given is obviously inadequate in time of war.

The manufacturing facilities at the Frankford Arsenal can be greatly increased by converting the present carpenter shop and the lumber shed into shop buildings for manufacturing artillery ammunition, these buildings being located very conveniently for the purpose. The utilization of these buildings would, of course, mean the construction of a carpenter shop and lumber shed which can easily be done on ground available for the purpose. The construction of a new carpenter shop and lumber shed, the extension of the present carpenter shop and alteration of the lumber shed would involve an expenditure of about $95,000. A high explosive loading shop is required at an expenditure of about $32,000, and a fireproof artillery ammunition storehouse at a cost of about $17,500, making a total cost for construction of about $139,500. Additional machinery should be provided for to increase the output of the ammunition for the larger field cannon, and $200,000 should be provided for at the same time for the necessary machinery to enlarge the output. This would make the total amount to be appropriated about $340,000. While this is a comparatively large sum, yet it is only slightly more than the loss that the Government has made on the existing orders given outside contractors for artillery ammunition, namely, $312,214.84.

2. THE ACQUIREMENT OF ABOUT 25 ACRES OF LAND ADJOINING THE ARSENAL.

This land is now undeveloped property and is on the market for sale, proceeds thereof to go to the University of Pennsylvania. Its acquisition is desirable for the locating of the magazines which are now too close to the shop buildings; for the construction of magazines for the storage of explosive ammunition which is now required to be shipped to Picatinny Arsenal, at a cost of about $18,000 per annum; and to prevent it falling in the hands of parties who may utilize the tract for the construction of dwelling houses. In the latter case experimental work which is now being done at the arsenal by way of firing will probably be a matter of complaint by the residents and lead to the curtailment of the activities of the arsenal. The cost of the land should be about $154,000.

3. FIRE PROTECTION, ETC.

While the above are considered the principal needs of the Frankford Arsenal, there are other minor needs which are very urgent, such as increased fire protection, construction of embankment about an exposed magazine, and an extension of the metal storehouse for the reception of valuable scrap which is now stored in the open on platforms. These needs would cost about $38,500.

4. OTHER PROJECTS.

There are other needs which are not quite so urgent at the present time, such as a new office building, to cost $75,000. The present building is now so congested that the clerical work is now being done in this building and in two other storehouses. The proposed building would provide for all the clerical and drafting work at the arsenal. The Frankford Arsenal is much behind other leading manufacturing establishments in not providing adequate facilities for the comfort of its employees. A storehouse has been under consideration, at a cost of $45,000, in which would be reserved a floor wherein the young women employed at the arsenal could have their luncheons and also utilize it for recreation purposes during the noon recess. Old materials at the arsenal are overhauled by employees in a basement, which should not be utilized for this purpose.

The sidewalks about the west side of the arsenal have been condemned by the city of Philadelphia, but the arsenal is without funds to repair them. The inclosing wall along part of the arsenal is ready to fall, and the sidewalk along this wall is so narrow that at places two persons can not pass each other. The inclosing wall should be rebuilt and the sidewalk widened approximately 5 feet. Part of the sidewalk on the north side of the arsenal is an ordinary dirt one. The exterior of the arsenal, a Federal institution, does not bespeak well of its ownership. These exterior improvements could be made at a cost of about $11,000 to $12,000.

Public men visiting the arsenal have been informed that the frame structures in which are housed the chemical laboratory, electrical shop, plumbing shop, and printing shop were condemned by the Inspector General's Department of the Army several years ago. A fireproof building could be constructed for about $50,000 which would house these various shops.

5. IF AT PANAMA, WHY NOT HERE?

The public have generally appreciated the splendid work which has been done by the Federal Government in conserving the health of its employees engaged in the construction of the Panama Canal by the elimination of mosquitoes, while nothing has been done at the Frankford Arsenal toward filling in the low places, which are nothing but breeding spots for mosquitoes. Such low places at the arsenal are gradually being filled in by refuse from the arsenal, but it will take a great many years to accomplish the result. It is believed that all low places should be filled in with as little delay as possible, so that there will be, at least, no swampy land on the reservation.

The Tariff.

SPEECH

OF

HON. CHARLES L. BARTLETT,

OF GEORGIA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, September 30, 1913.

The House had under consideration the conference report on the bill (H. R. 3321) to reduce tariff duties and to provide revenue for the Government, and for other purposes.

Mr. BARTLETT. Mr. Speaker, in five minutes I have not the time to and I can not discuss the bill or the conference report, but I wish to say I have no doubt in my mind that this bill will not seriously affect legitimate business, and I do not believe the manufacturers of this country should have any fears that the bill will seriously affect them or their legitimate business. I hold in my hand a clipping from the New York Herald of a few days ago, which states that some 60 manufacturers in the country have organized and will send abroad their agents for the purpose of carrying their goods into Japan, India, China, and all the countries where there is so much of cheap labor, and as this bill is to become a law before this week shall pass, then under this law they will be sending their goods to compete with the cheap labor of these countries

and with every other country in the world. I shall put that statement in the RECORD, and also an editorial which appeared in the New York World in the issue of to-day upon the subject of this bill.

[From the New York Herald.]

AMERICAN GOODS TO CIRCLE GLOBE—60 MANUFACTURING ESTABLISHMENTS TO SEND 10 SALESMEN AROUND WORLD ON 2 YEARS' TRIP.

A world tour in the interest of trade expansion will start from this city next month when representatives of 60 manufacturing establishments in the United States, a large number of them from New York, Philadelphia, and cities East and West, will carry American goods around the world in an effort to introduce goods direct from manufacturer to buyer.

This does not mean that there will be 60 men in the party, but a party of 10 salesmen will represent all the interests in the organized expedition, whose object will be to put goods of American manufacture on a fair competitive basis with those of other countries.

The tour includes Cape Town, the first stop; then India, the Straits Settlements, Australia, New Zealand, the Philippines, China, Japan, Hawaii, Central America, both coasts of South America, and back home by way of Cuba. It is expected that the tour will last two years.

The movement was proposed by the Smythfield Export Co., of Philadelphia, and was quickly subscribed to by several New York manufacturers and those of other cities. It will be in charge of Otto Kafka, who has wide experience in the export business and is especially fitted for the work. He is organizing 10 sales managers, each in charge of 6 lines of goods. They will carry a full line of samples.

When a foreign country is reached the party will open quarters in the larger cities and at once get in touch with the merchants and buyers of the place, learn what the people want, show the samples carried, and if these do not suit arrange to get what they want, the same as any New York salesman going into a city in this country to dispose of his wares.

If the field looks good at each point an agency will be opened in charge of a native of that country. He will be left to take orders on actual samples, with which he will be supplied direct from this country. The Americans will open the country to the American goods, and it will then be the business of the native manager to hold the trade.

Goods will be ordered directly from the manufacturers who produce the particular lines wanted. In effect the buyer will deal with the producer. The export houses will figure only as their facilities may be desired in handling goods and making settlements, for which they will get 2½ per cent commission.

The idea is believed to give effect to true economic principles, and it will substantially eliminate the export houses, with their double commissions, at least so far as the foreign business of those manufacturers who join in the special movement is concerned.

—

[From the New York World.]

THE END OF EXTORTION.

When the tariff bill as agreed upon by the conference committee of the two branches of Congress was reported to the House yesterday a great and patriotic task was virtually completed. A memorable record was made. A precedent never to be forgotten was established.

For the first time since the Civil War an honest general revision of the tariff downward, often promised by leading men of all parties, had been agreed upon. For the first time since protection for monopoly's sake had become an institution seemingly invincible greed and corruption had been met on their own ground and vanquished. For the first time since public plunderers sought refuge in the United States Senate a tariff measure emerged from that body fairer and wiser and lower than it was received from the House.

The new tariff defeats not only the organized rapacity of those who have long controlled such enactments, it overcomes also the threats of the panic breeders and the falsehoods of the hired claquers who for a generation or more terrorized people and Congress. It becomes a law with Republican as well as Democratic support. It is welcomed even by the very interests which for years bludgeoned those who suggested a similar enactment.

When our tariffs for extortion averaged nearly 50 per cent on the value of our dutiable imports, a suggestion of the smallest reduction was met by cries of "free trade." The act now completed reduces the average of taxation at the customhouses to one-half the rates that were once deemed necessary, but it is more truly a measure of protection than any law which the combined corruptionists of the past bought with money and favor.

This law was written in behalf of the people. It taxes wealth, indulgence, luxury. It frees many of the necessaries of life. It is intended to give consumers cheaper goods, or better goods for the same money. It relieves manufacturers by untaxing raw materials. It promotes honesty in trade. It removes the support of Government only from the hopelessly inefficient and dependent.

Nearly a century ago, when Henry Clay introduced what he called "the American system" to the people, his idea of sufficient protection for American labor was embodied in a tariff of 20 per cent. We have had tariffs for monopoly since that time of more than twice that figure. We are now to have a tariff reformed after years of struggle, after years of oppression, after years of deception, intimidation, and corruption, that safeguards labor on the one hand and does not rob it on the other.

While the economic question involved has hardly been touched, the moral triumph that has been won is complete. The thanks of the country are due to every Member of Congress, Republican and Democrat, who has contributed to this result; but especially to be honored are Representative UNDERWOOD, Senator SIMMONS, and President Wilson, without whose untiring labors, wisdom, and moderation the happy issue now at hand might have been impossible.

I did not rise so much to discuss the provisions contained in the tariff bill and the results we believe will follow as I did to discuss an amendment as to which there is disagreement between the two Houses, said amendment being known as the Clarke amendment. I shall vote against the Clarke amendment. I have on various occasions in this House expressed my views on the subject of the tariff. I believe that a new era of independence for both the manufacturer and for the consumer will be ushered in under this bill when it becomes a law.

Congress can, in my judgment, control those illegitimate transactions, like gambling in cotton futures, by the same means it suppressed the lottery business, by denying the use of the mails and the telegraph to those engaged in the business; besides, the States can by appropriate legislation prohibit it. That the States have full power over the subject, I quote the following from the Supreme Court of the United States in the case of Ware & Leland v. Mobile (209 U. S.):

> The sole question here presented is whether the statute in question is an attempt to regulate interstate commerce, for if the plaintiffs in error are shown by the foregoing agreed facts to be engaged in interstate commerce, then the statute is void, as an attempt by a State to regulate the commerce which the Constitution of the United States places within the exclusive control of Federal authority.
>
> Interstate commerce must be such as takes place between States as differentiated from commerce wholly within a State. It must have reference to interstate trade or dealing, and if the regulation is not such, and comprehends only commerce which is internal, the State may legislate concerning it. In each case the recurring question is, On which side of the line does the commerce under investigation fall? * * *
>
> But how stands the present case upon the facts stipulated? The appellants are brokers who take orders and transmit them to other States for the purchase and sale of grain or cotton upon speculation. They are in no just sense common carriers of messages, as are telegraph companies. For that part of the transactions, merely speculative and followed by no actual delivery, it can not be fairly contended that such contracts are the subject of interstate commerce; and concerning such of the contracts for purchases for future delivery as result in actual delivery of the grain or cotton, the stipulated facts show that when the orders transmitted are received in the foreign State the property is bought in that State and there held for the purchaser.
>
> The transaction was thus closed by a contract completed and executed in the foreign State, although the orders were received from another State. When the delivery was upon a contract of sale made by the broker, the seller was at liberty to acquire the cotton in the market where the delivery was required or elsewhere. He did not contract to ship it from one State to the place of delivery in another State. And though it is stipulated that shipments were made from Alabama to the foreign State in some instances, that was not because of any contractual obligation so to do. In neither class of contracts, for sale or purchase, was there necessarily any movement of commodities in interstate traffic because of the contracts made by the brokers.
>
> These contracts are not, therefore, the subjects of interstate commerce any more than in the insurance cases, where the policies are ordered and delivered in another State than that of the residence and office of the company. The delivery, when one was made, was not because of any contract obliging an interstate shipment, and the fact that the purchaser might thereafter transmit the subject matter of purchase by means of interstate carriage did not make the contracts as made and executed the subjects of interstate commerce.

From this decision it seems clear there is no necessity that Congress should resort to this doubtful constitutional power to use the taxing power to destroy.

I am opposed to this amendment and this method of legislation. In all the service that I have rendered in this House I have never found occasion when I was willing to use the taxing power of this Government in order to destroy any legitimate business. I do not believe that the Constitution of our country authorized the use of this great power of the Government either to destroy or to build up the business of a citizen, nor am I willing, Mr. Speaker, to violate the Constitution, in my opinion, and invade reserved powers of the States of this Union and say what sort of contracts the citizens of those States shall enter into. I do not believe the power exists either to use to destroy an industry or a business or to regulate a business within the confines of a State. Mr. Speaker, believing this to be true, I shall vote against the Clarke amendment. I realize some of the great evils that exist by reason of the methods that have been pursued upon the stock exchange of New York and elsewhere. I have upon occasions voted for a bill which kept from the mails and from the use of the telegraph communications relating to those contracts which were purely gambling contracts, but however great the evil may be, I have never yet in my experience as a Member on the floor of this House favored either the use of the power of the Government to tax a business out of existence or the use of the power of the Government to unconstitutionally invade the rights and the privileges of the States to regulate within their borders the business that is purely and legitimately within the control of the legislatures of those States. Now, Mr. Speaker, I do not care further to detain the House upon this subject. To undertake to do so and to give in detail the reasons I have with reference to this amendment, why I oppose it, what my views would be with reference to correcting the evil, would take more time than I have at my command, and I have simply risen in order that I might not be misunderstood when I vote against this amendment or when I vote to maintain and support, as I have always endeavored to do, the Constitution of the United States and not to stretch the power of Congress and invade the reserved rights of the States. [Applause.]

The SPEAKER. The time of the gentleman has expired.

The A B C of the Panama Canal Tolls Controversy.

EXTENSION OF REMARKS
OF
HON. THETUS W. SIMS,
OF TENNESSEE,
IN THE HOUSE OF REPRESENTATIVES,
Wednesday, October 29, 1913.

Mr. SIMS. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include an article, by Henry Herzberg, which is published in the Baltimore Evening Sun of October 15, 1913. The article is as follows:

[From the Baltimore Evening Sun, Wednesday, October 15, 1913.]

THE A B C OF THE PANAMA CANAL TOLLS CONTROVERSY.

(By Henry Herzberg.)

The refusal of England to participate in the Panama-Pacific Exposition to be held at San Francisco once more excites public interest in the pending issues between Great Britain and the United States.

The primal question involved in the present controversy with Great Britain is not concerned with the elementary right of the United States to grant a subsidy to its own vessels or whether the United States is estopped from regulating its domestic commerce. The dispute rests upon the pivot whether the Panama Canal act of August, 1912, impinges upon the rights of Great Britain and other nations in respect to the use of the canal as stipulated in our treaties.

The regulation of tolls and the conditions governing traffic through the canal is not a political or an economic problem of domestic origin which only indirectly affects foreign nations; but, on the contrary, it is an international controversy developed from our control of the canal property, the titular sovereignty of which still inheres in Panama; and while the question presented is abstractly a purely economic one, yet its settlement depends upon the interpretation of treaty rights and obligations.

Are we unmindful of the fact that the actual building of the canal was conditioned upon England's surrender of a valuable privilege?

In his masterly presentation of this subject in the Senate Senator ROOT, with learning and candor, penetrated the very fiber of the present dispute. He showed the evolution of the building of the canal by tracing the origin of our various treaties bearing upon trans-Isthmian communication. In his analysis Senator ROOT pointed out the fact that when the United States turned its attention to the possibilities of a ship canal it found Great Britain held the place of vantage or practically controlled the eastern end of the Nicaragua route, upon which all minds were concentrated. The United States then sought a treaty with Great Britain by which England would renounce the advantage she had acquired and admit the United States to equal participation with her in the control and protection of a canal across the Isthmus. From these negotiations there arose the Clayton-Bulwer treaty, which was ratified by Great Britain "as a concession to the urgent demands of the United States," says Senator ROOT, who incidentally remarks that Mr. Clayton held two unratified treaties with Nicaragua as a whip over the British negotiators.

The force of this contention is realized at this time, when the Wilson administration is reviving the Knox treaty, whereby Nicaragua would give to the United States in perpetuity the exclusive right of way for an interoceanic canal across Nicaraguan territory, a permanent lease for a naval station on the Pacific side of Fonseca Bay, and permanent occupation of certain small islands off the Nicaraguan coast. In consideration of these grants the United States is to pay $3,000,000, which Nicaragua will expend on certain designated improvements.

Under the provisions of the Clayton-Bulwer treaty Great Britain gave up its rights under the protectorate over the Mosquito coast and also relinquished its rights to what was commonly supposed would be the eastern terminus of the canal, while the United States sacrificed nothing.

In order to build and control the canal the United States made negotiations with Great Britain to supersede the treaty of 1850 by an engagement that would free us from our treaty obligations which bound us not to obtain or maintain exclusive control over a ship canal across the Isthmus. In 1901 ratifications were exchanged and the Hay-Pauncefote treaty became operative. This treaty, while it superseded the earlier convention of 1850, yet implied the nonfortification of the canal and specifically provided that the canal shall be free and open to the vessels of commerce and of war of all nations observing the rules prescribed for its operation on terms of entire equality, to the end that there shall be no discrimination against any nation or the citizens or subjects thereof in respect to the conditions or charges of traffic or otherwise. It was stipulated, further, that such conditions and charges shall be just and equitable.

The purpose of the construction of the artificial waterway was to facilitate the free movement of the world's commerce and to improve distributive processes by shortening existing trade routes. Our own national interests were to be identical with the world's interests. The commerce of all nations was to be treated on an absolute equality and in harmony with our treaty guaranties, and no discrimination against or in favor of any nation or any national group was allowable.

If the Clayton-Bulwer treaty of 1850 had not been superseded by the Hay-Pauncefote treaty of 1901, neither Great Britain nor the United States could have constructed or have obtained the exclusive control of the canal. But if the waterway had been built by others while the earlier treaty was in force, it would have been open to British and United States ships on equal terms, and the tolls leviable on such ships would have been identical. The purpose of the Hay-Pauncefote treaty, as Sir Edward Grey declares, was to recover our freedom of action and obtain the right which the United States had surrendered to construct the canal ourselves. "But the complete liberty of action," avers the English diplomat, "consequential upon such construction was to be limited by the maintenance of the general principle embodied in article 8 of the earlier treaty." The "general principle" of neutralization as stipulated in the Clayton-Bulwer engagement was reasserted in the Hay-Pauncefote treaty, and the basis of this neutralization was the rules embodied in the Constantinople convention. The purpose of the Hay-Pauncefote treaty was to facilitate the construction of the canal under the auspices of the United States by removing the prohibitions contained in the Clayton-Bulwer treaty. This is clearly set forth in the provisions of the treaty of 1901, which plainly and emphatically free the United States from its pledge made in the Clayton-Bulwer treaty of 1850 not to control the canal. On the other hand, Great Britain is not relieved of her obligations made in that instrument to forego ownership and exclusive control of a canal across the Isthmus.

The United States then acquired the right of construction and control and Great Britain acquiesced in the abrogation of the prohibition contained in the Clayton-Bulwer treaty; and in consideration of the acquirement of this right the United States bound itself to treat the vessels of commerce and of war of all nations exactly the same—that is, without discrimination, preference, or special privileges. In other words, the management and control of the canal rests with the United States, subject to the qualifications that the vessels both of war and of commerce of all nations should be placed on a parity and treated with absolute equality. This is the unequivocal meaning of the provision in the Hay-Pauncefote treaty reasserting the "general principle" of neutralization as established in article 8 of the superseded Clayton-Bulwer convention and as embodied in the Constantinople agreement of October 29, 1888.

M. Philippe Bunau-Varilla, who as representative of the Republic of Panama signed the Panama treaty, holds that the basic law of the operation of the canal reposes in the Hay-Bunau-Varilla treaty and not in the Hay-Pauncefote treaty.

Whether or not this claim is well founded, it must be allowed that the title or deed of the canal strip was conveyed to the United States by the instrument of the Panama treaty even as the previous right of the United States to construct the waterway was acquired by the ratification of the Hay-Pauncefote treaty.

"The terms of the Panama treaty," said Secretary of War Taft in 1906, "are peculiar in not conferring sovereignty directly upon the United States but in giving to the United States the powers which it would have if it were sovereign." Our rights on the Isthmus respecting the canal issue from the treaty with Panama of November 18, 1903, and these rights, according to every canon of decency and fair play, are subject to the express provisions of the Hay-Pauncefote treaty.

The truth is that Panama granted to the United States rights, power, and authority over the Canal Zone, so far as the construction and control of the waterway is concerned; that is, we acquired rights to build and maintain a canal under the express terms of a treaty. While we have the sole right to the possession of the canal and the exclusive right to operate it, the titular sovereignty remains in Panama. Moreover, our treaty engagement with Panama is in the nature of a concession, for which we are obligated to pay $250,000 annually, beginning nine years after the ratification of the treaty. This contract scarcely supports the claim of an absolute sovereignty on the Isthmus. Though the new Republic was in a more delicate position with

reference to its sovereignty than was Colombia, yet Panama, technically at least, refused to part with its sovereignty absolutely.

But the question is immaterial whether or not sovereignty is lodged actually with the United States, because the Hay-Pauncefote treaty specifically provides for a change of sovereignty in the following language:

"No change of territorial sovereignty or of the international relations of the country or countries traversed by the before-mentioned canal shall affect the general principle of neutralization or the obligation of the high contracting parties under the present treaty."

The United States does not possess rights on the Isthmus superior to the provisions of our treaties. Our rights are strictly treaty rights and are subject to contractual provisions. For practical purposes only may the United States exercise the rights of sovereignty over the Canal Zone. The titular sovereignty still inheres in the Panama Government. The practical purposes consist in the building and operation of the canal. The United States exercises or should exercise sovereignty only so far as it may be necessary to make the canal workable, something like the exercise of the sovereign rights of eminent domain by railroads in order to make the carrier system operative. Since the rights which the United States possess in the canal tract arise from the fountain of treaty provisions, we can not divorce ourselves from the obligations which spring from those treaty rights and regulate canal traffic in the same way that we control the strictly domestic and internal commerce of the United States. If it had been our purpose to discriminate in favor of our coastwise shipping, we should have striven by a straightforward course to reserve this right by an express stipulation to that effect.

Our officials, doubtless, were aware that the building of the canal would not have been actualized if we had insisted upon the application of a domestic policy to the canal traffic.

When the first Hay-Pauncefote treaty was considered in the Senate, Senator Bard, of California, sought to amend the treaty by specifically providing for the right to discriminate in favor of our coasting trade. This amendment, which was defeated by a vote of 27 to 43, indicated the disposition of the Senate not to depart from our historic policy to treat the vessels of all nations with absolute equality.

But now, when the waterway is nearing completion, we have the temerity to do by indirection that which we would not propose even by direct negotiation before we had the right to construct the canal.

It is clear, then, that preferential treatment accorded our coastwise vessels commits violence upon our treaties and is therefore not a bona fide transaction, but is mala fide—a breach of national faith.

But it is urged that the United States owns, controls, and has paid for the canal and yet is restricted by treaty from aiding its own commerce in the way that all other nations of the world may do freely in the exercise of their sovereignty.

It can be demonstrated that this is a superficial view which is unsupported by actual facts and conditions.

In her note of protest of November 14, 1912, Great Britain, through Sir Edward Grey, made it plainly understood that the remission of tolls or their payment by our Government would not be objectionable if the remitted moneys would not fall as an additional burden upon the world's shipping using the canal. In other words, our treaty obligations clearly exact that all nations of the world shall receive equal treatment in the use of the transisthmian waterway, and therefore it follows that our vessels must bear their proportional share of the burden of the canal's maintenance.

The United States, then, is within its rights if in granting a subsidy to its own vessels it does not levy the amount of such subsidy directly or indirectly on the foreign shipping of other nations.

Sir Edward Grey properly maintains that we are debarred from granting a subsidy if the method chosen for granting such subsidy has the effect of imposing upon British or other shipping an unfair share of the upkeep of the canal.

The contention of Great Britain is well grounded that the Panama Canal act is discriminatory, because the exemption of our coastwise vessels from any contribution to the operating cost of the canal and to the interest charge imposes upon foreign ships the payment of more than their just proportionate share. Our special commissioner, Prof. Emory E. Johnson, in his exhaustive report, has shown that if tolls were levied equally upon American and foreign vessels it might be possible to make the canal self-supporting in a decade, but he declared that it would not be possible to secure from foreign shipping alone ample revenues to make the canal pay for its own upkeep.

The United States shames its former pretensions for equal and equitable treatment, and not only refuses to rescind its action, which casts aspersion upon its honor, but scorns the reference to arbitration as suggested by Sir Edward Grey in his note.

It should be recalled that the United States has ratified 25 treaties of arbitration with the leading nations of the world. These engagements run for a period of five years, and for the most part are coterminous. The United States now not only disregards the terms of the Hay-Pauncefote treaty and refuses to arbitrate the questions of tolls, but allows the arbitration treaty of 1908 to lapse without renewal. Does not this action imperil the world's structure of arbitration? The treaty of 1908 with Great Britain provides that controversies or differences of a legal character and affecting the interpretation of treaties which fail to yield to diplomatic adjustments shall be arbitrated if the questions at issue do not concern the independence, vital interests, or honor of the contracting States and do not concern the interests of third parties. Now, it would seem that the Panama Canal tolls question is within the purview of this treaty and is arbitrable, since in a political sense it does not affect the independence, vital interests, or honor of the contracting parties, though it may concern the interests of third parties.

But a course more honorable even than arbitration would be to repeal the exemption clause of the Panama Canal act. Such action would avoid the denial of solemn asseverations made in our treaties with New Granada (Colombia) in 1846, with Great Britain in 1850 and 1901, with Nicaragua and with Panama in 1903, and, further, would reenforce the moral primacy which the United States has held as the supporter of neutral rights throughout the world. By submitting the tolls controversy to a judicial tribunal the United States would preserve our self-respect and at the same time promote the cause of arbitration. The repeal of the law, however, would be more salutary, because such action not only would redound to the national honor, but also would foster the ends of international justice.

How fatuous is a policy that causes a breach of the national faith and quickens the avarice of a class to which the Government already has dispensed an enervating legal monopoly. But even if the toll-exemption provision did not involve the blight of subsidy and actually would benefit the American shipper and consumer, the United States could not make such exemption in favor of its own shipping consistent with national honor. We are precluded from such a course by the most sacred treaty obligations, which bind us not to discriminate against the world's shipping and carrying interests in respect to conditions and charges affecting canal traffic.

To deny the arbitration of the controversy or to refuse to repeal the law, which is as offensive to the American sense of equity as it is to British judgment, would be to enthrone the pocket greed of a group above the finer elements of national righteousness.

Criminal Aliens.

EXTENSION OF REMARKS
OF

HON. GEORGE W. EDMONDS,
OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, October 29, 1913.

Mr. EDMONDS. Mr. Speaker, it has been my privilege to introduce in the House a bill amending the immigration laws of the United States, providing for the deportation of criminals who are now in prison or may in the future be sentenced to imprisonment, and who are unnaturalized and therefore not citizens of our country, but of the country from whence they came.

There are a number of reasons why the bill amending the immigration laws should pass, and the following are a few of them:

First. The rapidly increasing percentage of alien prisoners, particularly in States adjacent to foreign lands or along the coasts.

Second. The increasing burden to the taxpayers in supporting the institutions for the incarceration of these aliens and the support of their dependents who are in charitable institutions.

Third. The burden on the taxpayers for additional police protection, as most of these aliens when discharged continue their criminal career.

Fourth. The passage of House bill 5598 will cause more aliens coming into the country to become naturalized citizens, and therefore have more respect for our laws.

I have been trying to gather statistics as to the exact number of criminals in prison who would be deported under this bill if it becomes a law, but have found it impossible to secure general statistics later than 1908, when the Commissioner General of Immigration found there were in prison in the United States

23,050 foreign-born prisoners, of whom 7,920 were naturalized and 15,130 still aliens. As the total number in prison at that time was 148,550, it will be seen that over 10 per cent were aliens.

It is possible, however, to get local data of more interest. Take New York State, for instance: In the report of the superintendent of State prisons for 1909 there is a special section devoted to foreign-born and alien prisoners. It reads as follows:

FOREIGN-BORN AND ALIEN PRISONERS.

While it is impossible to definitely determine all of the causes that have contributed to the recent remarkable increase in prison population, comparison of the nativity tables in the reports for 1906 with those of 1909 proves quite conclusively that the crowded condition of our prisons is largely due to the influx of immigrants into this State during the last few years

A census of the 4,320 prisoners in Sing Sing, Auburn, and Clinton Prisons on September 30, 1909, was as follows:

	Number of prisoners.	Per cent.
Natives of New York State	1,830	43
Natives of other States	878	20
Natives of foreign countries, citizens of United States	521	12
Natives of foreign countries, aliens	1,091	25
Total	4,320	100

It will be seen that without the alien prisoners the 3,600 cells in our present prisons would afford ample quarters for the population. At great cost and inconvenience the State is maintaining and endeavoring to educate, train, and rehabilitate 1,091 men who are subjects of foreign countries, most of whom have but recently come to the United States and all of whom are by reason of conviction of felonies forever debarred from citizenship.

Table showing, by nationalities, the number of foreign-born prisoners in the prisons in 1906 in comparison with the number in 1909, together with the increase or decrease.

Countries.	1906	1909				
	Number of foreign-born prisoners.	Number of foreign-born prisoners citizens.	Number of foreign-born prisoners aliens.	Total.	Increase.	Decrease.
Africa	1	2		2	1	
Arabia	1					1
Armenia	1	2		2	1	
Australia	1	2	3	5	4	
Austria	53	23	77	100	47	
Barbados	1					1
Bavaria	12					12
Belgium	3		1	1		2
Bohemia	3	3	3	6	3	
Brazil		1		1	1	
British Guiana	2	1		1		1
Canada	70	21	43	64		6
Chile			1	1	1	
China	9	1	5	6		3
Corsica			1	1	1	
Cuba	7	5	2	7	0	
Denmark	4	2	6	8	4	
England	75	38	42	80	5	
Finland	4	2	1	3		1
France	29	5	14	19		10
Germany	200	110	109	219	19	
Greece	7	3	14	17	10	
Holland	4		6	6	2	
Hungary	9	4	22	26	17	
India		1		1	1	
Ireland	107	57	38	95		12
Italy	312	135	473	608	296	
Japan	1	1		1	0	0
Malta			1	1	1	
Mexico	1		2	2	1	
Newfoundland	1		1	1	0	0
New Zealand			1	1	1	
Norway		5	2	4	6	1
Nova Scotia	1	1		1	0	0
Philippine Islands		1		1	1	
Poland	28	7	38	45	17	
Porto Rico	1					1
Portugal	1	1		1	0	0
Prussia			1	1	1	
Roumania	7	5	11	16	9	
Russia	101	52	138	190	89	
Scotland	11	5	12	17	6	
Sicily	1					1
Spain	3	1		1		2
Sweden	9	8	7	15	6	
Switzerland	11	5	7	12	1	
Turkey	1	1	1	2	1	
Venezuela	2					2
Wales	4	3	1	4	0	0
West Indies	5	10	5	15	10	
Born at sea	2					2
Total	1,111	521	1,091	1,612	558	57
Less decrease					57	
Net increase					501	

From 1906 to 1909 the population of Sing Sing, Auburn, and Clinton prisons increased 939.

Of this increase 505 prisoners, or 53.8 per cent, were foreign born.

While natives of 33 countries were represented in the alien population shown in the foregoing table, 73 per cent of the whole number were contributed by 4 nations, to wit:

	Number.	Per cent.
Austria	77	7
Germany	109	10
Italy	473	43
Russia	138	13
Total	797	73

Of the 19 condemned prisoners confined in the prisons at the close of the last fiscal year 9, or 47 per cent, were aliens. Their nativity was as follows:

Armenia	1
Germany	1
Italy	1
West Indies	6
	1

It is a fact worthy of note that among the 19 condemned prisoners there was no naturalized citizen of the United States, nor do the prison records show that a naturalized citizen has been executed in this State since the electrical-execution law took effect in 1889. The total number of executions during this period was 117.

A classification of the alien prisoners as to the nature of their crimes was made in July, 1909, and is interesting as indicating the tendency of criminally inclined aliens from some countries to commit crimes against the person and of those from other countries to offend against property. The more noticeable cases are as follows:

Countries.	Against person.	Against property.	Miscellaneous.
Austria	20	58	1
China	0	0	1
Germany	29	79	3
Italy	318	94	39
Russia	29	102	2

While great numbers of immigrants who land in New York go to other States to reside, it is undoubtedly true that a large percentage of the vicious and ignorant remain in this State and make large cities their headquarters.

Thus there is forced upon New York State and upon its charitable and penal institutions more than their due proportion of the undesirable classes of immigrants—the lawless, the illiterate, and the defective.

Largely from this element has come the great alien prison population that has crowded our prisons to such an extent as to make it necessary for the legislature to provide an additional prison.

Not only are these men a menace to the lives and property of our people when at large and a great expense to them when in confinement, but as a class their presence in the prisons is a hindrance to the successful application of the reformatory, educational, and training systems there in use.

It is apparent to all that the interests of this country would best be served by the exclusion of this undesirable class of immigrants who claim and receive the protection and benefits that our form of government affords, but disregard our laws. If, however, they are to be permitted to enter our ports with no further restrictions than the present laws and system of inspection impose, is it just and equitable that the individual States in which they may chance to locate and who are powerless to exclude or deport them should be obliged to bear the expense of maintaining these criminal aliens in their penal institutions, or that the discipline of such institutions should be demoralized and reduced in effectiveness by their presence? They are a class by themselves. Our modern methods of penal administration and control do not fit them. They should be segregated and treated as a class, and it would seem but right that the Federal Government, which permits these alien criminals to land on its shores, should assume the burden of maintaining them when they are convicted of crime, and that it should provide prisons where they may be kept by themselves and where the systems of discipline, education, and training shall be especially adapted to apply to this distinctive class of prisoners. When they have served their terms they should be deported and never allowed to return here.

As 59 per cent of the alien prisoners now in our prisons are unmarried, and less than 50 per cent of the married men have wives or children in the United States, the claim that a man should not be deported leaving a helpless family here would apply to but a few of the present alien prison population.

It may be urged that State prisoners can not be legally detained in Federal prisons. Until recently, and to some extent still, United States prisoners were kept in the penal institutions of nearly all the individual States. Only brief, simple laws were required to legalize this practice, and it would seem that similar laws would permit State prisoners to be confined in Federal prisons.

After reading this report it will be seen that the taxpayers of New York are supporting an alien population of 25 per cent in the State prisons, and that there was an increase of 33 per cent in the number of foreign-born prisoners in the three years 1906 to 1909.

There is no question as to the right of deportation, as in the case of United States ex rel Freeman v. Williams (175 Fed. Rep., p. 274), Judge Hand says:

In the case at bar there was shown ample reason to suppose that the relator was a person of habitual criminal propensities. I am satisfied, indeed, that there was extreme likelihood that he would, if he remained here, soon be concerned in crime, and, if evidence could be found, put into prison. Even while he was not imprisoned he would live at the expense of any community in which he remained. The sole question is whether the words of the statute, "likely to become a public charge," must be limited to the likelihood of his becoming a pauper. Probably

this was the primary meaning of the words, but in modern times many persons have come to regard crime and pauperism as analogous facts in the life of a community and without in the least intending necessarily to impose such a sociological purpose upon the classification of Congress I believe that the statute should be reasonably construed as including, not only those persons who through misfortune can not be self-supporting, but also those who will not undertake honest pursuits and who are likely to become periodically the inmates of prisons. Literally taken, the words in question certainly cover their case. They are surely public charges, at least during the term of their incarceration. Whether they are such while they are living dishonestly, though unconvicted, it is not necessary to determine.

So to construe the act is not to decide that such persons may be convicted and punished upon loose considerations of their probable propensities. The issue is wholly of the relator's right to enter the country, and that right, as has been so often said, is entirely the creation of Congress. Nor does the construction conflict by implication with the other subdivision of section 2 which makes a ground of exclusion the conviction of crime of an immigrant alien, or his admission that he has committed a crime. That subdivision contemplates a single delinquency, but here the Secretary has concluded from the evidence that the relator's habitual propensities so dispose him to a criminal life that he will be likely to resume it.

It is true that the warrant did not specify this ground of deportation, and I find no requirement, either in the act or in the promulgated regulations, that the warrant must state the alleged grounds.

Having determined that there was one adequate ground for his conclusion I shall not consider the other points which the relator raises. It is not necessary in this view to decide whether the relator's silence upon the hearing was an admission which should be used against him. The evidence was adequate without such admission to determine that he was likely to become a public charge; nor does it appear that upon that question the admissions were used against him. I do not mean to be understood as deciding whether they should or could not be so used, that being unnecessary to the determination of this proceeding.

Writ quashed and relator remanded.

In endeavoring to secure statistics some very interesting data and suggestions were received. Otis Fuller, warden of the Michigan Reformatory, says:

Replying to your favor of June 17, your deportation bill, providing for the return of criminals to the country from whence they came, is all right except the last portion, which makes the return of a deported person a misdemeanor punishable by redeportation; whereas the wiser thing would be to make such return a felony, punishable by a penitentiary sentence of not less than 1 nor more than 10 years, followed by deportation upon completion of the prison term.

Under your proposal you will see that any person who has been deported to Canada or Mexico could return by the next train, and the Government could do nothing but send them back. It would be impossible to make such undesirables stay deported.

Your bill, however, has the right end in view, and I think it will be profitable to strengthen the laws against undesirables in every way that it is possible to do so.

We have no statistics covering the number of unnaturalized persons received at this institution during any given period. We have, however, gone through our records for the year ending June 30, 1913, and find that out of 327 men received 17 aliens had been in this country less than five years, hence must have been unnaturalized. That there were many others I have no doubt, but we have nothing to prove it. We have now in the institution waiting deportation under the present law 13 men, and during the year mentioned above 5 men were turned over to the immigration service by us for deportation. Several others would have been deported but for the fact that they had just passed the statute of limitations, having been in the United States over three years at the time the department got the information that they were in prison.

Anything further that we can do to aid in the amendment of the statute looking to a more stringent deportation law will be cheerfully done.

Frank L. Randall, chairman of the prison commissioners of the Commonwealth of Massachusetts, has suggestions as to general immigration laws which are of interest:

Further answering your letter of June 3, which was addressed to his excellency the governor of this Commonwealth, and concerning which I wrote you briefly on June 19, I have to add the following, viz: This board of prison commissioners has the direct management of the prison at Charlestown, the reform prison at Concord Junction, the Reformatory for Women at Sherborn, and the prison camp and hospital at West Rutland. At the last-named institution all of the prisoners are received on commitment from the other institutions named, or from penal institutions in this State under control of other boards than this one.

The warden of the State prison reports under date of June 19, "that there then were 324 foreign-born prisoners in that institution, of whom 40 had entered the United States within three years prior to the date of sentence and 284 have been in the United States for more than three years before their sentence." Upon our sending the report back to the warden, for the purpose of checking up the names of all foreign-born prisoners who had become naturalized before their conviction, we ascertained that there were 59 such; hence it appears by inference that there are 40 alien prisoners in State prison who have been in the United States less than three years and 225 who were in the United States more than three years prior to sentence. At the State reformatory the showing of the superintendent indicates that on June 19 of this year there were 25 prisoners who had entered the United States within three years of their sentence and 90 who had entered the United States prior to three years before their sentence. These figures of 25 and 90 from the reformatory indicate aliens only, persons having become naturalized not being taken into account in the report.

At the Reformatory for Women there were reported on June 23, 1913, to be 3 aliens who had entered the United States within three years of sentence and 22 who had entered the United States three years or more before sentence. At the same time there were reported from the prison camp and hospital 2 aliens who had entered the United States within three years of sentence and 10 who had entered the United States previous to three years before sentence. In every case the conviction was for a crime or misdemeanor involving moral turpitude, and the sentence was to imprisonment for one year or more.

In case that we may be able to furnish you with further information you must not hesitate to call upon us for anything which you desire.

In compliance with your kind letter of June 24, I respectfully submit the following suggestions, viz, that wherever it is practicable, through the assistance of the proper authorities of the foreign country, applications for leave to enter the United States may be made to the foreign representatives of the United States at their official stations, and that the question of their eligibility or ineligibility be determined before they leave their native land for the United States. The persons thus entering the United States after a proper showing, and after receiving official leave to do so, may be met upon their arrival at the port of entry, and that further travel to their destination may be facilitated by agents of this Government, and that they may be given such advice and counsel as will tend to save them from the hands of designing imposters and false friends, and that they may receive welcome evidence in their first impression of the desire of the people of the United States to receive well disposed and healthy accessions from other countries. It seems to me that the delay which occurs in quarantine and other inspections must be a very awkward and serious thing to foreigners after their long journey to our coast, and that the inspection as now given must be very superficial and unsatisfactory.

The State of Arizona, on account of its close proximity to Mexico, is particularly interested in this matter. In answer to inquiries the following letters were received:

JUNE 10, 1913.

MY DEAR MR. EDMONDS: I am in receipt of your letter of the 3d instant, inclosing copies of House bill No. 5598, relative to the deportation of unnaturalized criminals.

In my opinion, the provisions of your bill appear to be very desirable. For the purpose of securing for you the data which you have requested, I will refer your letter immediately to the superintendent of the State Prison of Arizona, and will ask him at the same time to provide the desired statistics at his earliest opportunity.

With great respect,

Very truly, yours,

GEORGE W. P. HUNT,
Governor of Arizona.

—

JUNE 16, 1913.

MY DEAR MR. EDMONDS: In accordance with the assurance which I gave you in my letter of several days ago, I inclose herewith copy of a letter received by me from Hon. R. B. Sims, superintendent of the Arizona State Prison, giving the data which you requested relative to the percentage of Arizona convicts who were unnaturalized.

Trusting that the information will prove to be of value to you, I am, with sincere esteem,

Yours, very truly,

GEO. W. P. HUNT,
Governor of Arizona.

—

FLORENCE, ARIZ., *June 13, 1913.*

MY DEAR GOVERNOR: I have your favor of the 10th with reference to furnishing some information for Representative GEORGE W. EDMONDS, to be used in support of his bill appertaining to the deportation of aliens who have been convicted of crime in this country.

Since this institution was established, May 20, 1875, we have had confined within the walls 2,105 people who were born in foreign countries. Of these 1,703 were born in Mexico. I regret very much that I am unable to tell you how many of these were naturalized citizens of our country, but there is nothing on the record of a man received at this institution to show whether or not he is a citizen. I believe, however, that the percentage of these men who have taken out naturalization papers is very small indeed, as the average Mexican takes no interest in such things and does not worry about civil rights.

I trust that this information will be of some interest and benefit to Mr. EDMONDS.

With kind personal regards, I am,

Very sincerely, yours, R. B. SIMS, *Superintendent.*

The governor of Virginia, in answer to requests for statistics, wrote as follows:

I have yours of the 11th, and will at once transmit it to the superintendent of our penitentiary and ask him to reply. I think your bill an admirable one.

And the governor of South Carolina, Hon. Cole L. Blease, says:

Your letter of June 11 inclosing your immigration bill received. It seems to me your bill would make a good law, but I think you could strengthen it by providing for the stopping of all immigration, and then we would not have to be bothered with getting rid of the undesirable.

In most States records are not kept by the authorities. Therefore they can not furnish information without considerable trouble. To show, however, that the evil is not local I will give statistics from a few of the penal institutions from which I have received letters. Understand that these figures do not mean all the alien prisoners in the States, but only in the principal institutions:

Year 1913.

Illinois State Penitentiary	172
South Illinois Penitentiary	41
Montana State Prison	13
Colorado State Penitentiary	75
Nevada State Penitentiary	34
Western Penitentiary of Pennsylvania, 20 per cent	188
New Mexico Penitentiary	23
North Dakota Penitentiary	14
Wisconsin State Reformatory	34
Utah State Prison	35
San Quentin Prison, California	325

The letter from the Wisconsin State Prison, Rev. Daniel Woodward, warden, is of interest:

Upon the request of the Wisconsin State board of control I have directed our record clerk, Mr. Schroeder, to prepare the inclosed statement for the purpose of furnishing you with information to support your bill which is now pending in the National Congress to amend section 3 of the immigration act, which, if it should become law, will deport unnaturalized criminals after they have served a portion of their term.

I am pleased to furnish you with inclosed information, together with any additional information or support it is possible for us to furnish you from this office. I believe your bill should become law, and that it is only rational and right that foreign countries be compelled to care for their criminals and unfortunates in place of this Nation and the several States of our country bearing that large additional expense.

I do not believe inclosed statement of the record clerk is complete, in that many of our inmates do not give us all the facts when in record interview. To say the least, inclosed statement is not overdrawn, and to my best judgment understates real conditions in this institution.

I am pleased to have the privilege of supporting you in the above bill and will be pleased at any time to answer additional questions to furnish you any additional information possible.

—

WAUPUN, WIS., *June 23, 1913.*

HON. DANIEL WOODWARD, *Warden:*

Relative to the attached letter from the board, in which they request certain information be given to Hon. G. W. EDMONDS, Member of Congress, regarding alien prisoners confined in this institution, will state that I have gone over our records for the past four years and find that the following number of alien prisoners were convicted and are now confined in this institution:

Alien prisoners who were convicted and sentenced to serve a term of more than one year in this institution, and who were convicted before they had been in the United States three years, total number, 25.

Alien prisoners who were convicted and sentenced to serve a term of more than one year in this institution, and who were convicted after they had been in the United States for more than three years previous to the commission of the crime for which they were sentenced, total number, 152.

Yours, very truly, G. SCHNEIDER, *Record Clerk.*

The letter from Texas is interesting:

Hon. G. W. EDMONDS,
House of Representatives, Washington, D. C.

DEAR SIR: Referring to your letter of June 11, directed to Hon. O. B. Colquitt, governor of Texas, inquiring as to the number of unnaturalized prisoners, beg to advise that after investigating this matter as carefully as possible we find there are approximately 400 prisoners in the Texas State penitentiaries who have not become naturalized American citizens, over 300 of this number being Mexicans; others are French, German, Italian, Swedish, and British nationalities.

We presume that all of the offenses of which these prisoners were convicted involve moral turpitude as expressed in your bill.

The present prison population of Texas penitentiaries is 4,080. If there is any other information desired, we will be glad to furnish same.

Yours, very truly,

BOARD OF PRISON COMMISSIONERS,
By OSCAR F. WOLFF, *Secretary.*

I would particularly call the attention of the Members of the House to the information in the Rhode Island letter:

Your communication of June 11 has been referred to this board, and the following information has been received from the warden of the State prison:

Statement showing number of American and foreign inmates confined at the Rhode Island State Prison and Providence County Jail.

STATE PRISON.

American	96
Foreign	62

COUNTY JAIL.

American	191
Foreign	109
Total	458

Also the following information from the agent of the State board of charities and corrections:

There is an urgent necessity for legislation authorizing the deportation of alien criminals, as each year we are adding largely from this class to our already overcrowded prison population. We trust the Edmonds amendment will prevail at this session of Congress. Our representative visited Washington and strongly urged the adoption of the Dillingham-Burton bill, not especially because of the literacy test, but for the reason that it contained a clause authorizing the deportation of alien criminals. Another important amendment is needed, to wit, the changing of the wording of section 20, so that alleged prior causes shall serve to deport insane aliens unless subsequent causes can be shown, and, further, that any of the excluded classes who shall enter the United States in violation of law and who become a public charge shall be deported at any time within five years of their landing. Our prison and jail census shows on June 1, 1913, nearly 500 inmates. Sixty per cent of this number are aliens, and 20 per cent of these aliens would be deportable under the Edmonds amendment, and the deporting of 50 alien criminals each year would represent a saving of $5,000 per annum in maintenance alone, not counting the cost of buildings.

Trust the above is what you desire; if not, would be glad to hear from you.

Very truly, yours, C. R. PARKER, *Secretary.*

So it will readily be seen that the evil is widespread, causing much expense and trouble to our authorities, and there does not seem to be any cure that can be suggested excepting deportation and keeping out of our country these criminals who will never become good citizens.

Segregation of the Races.

EXTENSION OF REMARKS
OF
HON. JAMES B. ASWELL,
OF LOUISIANA,
IN THE HOUSE OF REPRESENTATIVES,
Wednesday, October 29, 1913.

Mr. ASWELL. Mr. Speaker, I live in the South, where the negro is contented and happy. His troubles come from uninformed enthusiasts from other sections, who lead him astray. I am a friend of the negro, with whose life and character, as State superintendent of public education for many years, I became familiar and for whose industrial and elementary educational uplift I worked earnestly and constantly.

Having this first-hand information, I am deeply grieved to note by the press reports the serious and unnecessary injury done the negro race by the lack of information, the misguided energy, and the wild theories expressed at a negro church in the city of Washington on the 27th by Mr. Villard, of New York.

It is reported that he attacked the Democratic administration for the proposed segregation of the races in the District of Columbia. He seems to be shedding crocodile tears because some negro clerks in one of the departments are seated behind white clerks, many of whom are white women, and because some one in Atlanta said the negro's place is in the cornfield. He thinks that to segregate the races in the Government service is a stupid political policy. He wishes it considered a "rude and almost ruffianlike policy."

First, let me say that, in my opinion, Mr. Villard, born in a foreign country and a grandson of William Lloyd Garrison, the Abolitionist, is perfectly honest and sincere in his devotion to the negro. I have heard him speak with affectionate sympathy for the race, but his trouble is, like many other good but poorly informed, misdirected, would-be philanthropists, who try to tell us at long range how to handle the race question, he does not know what he is talking or preaching about. He simply does not know the negro. If he will spend a year in a typical negro settlement in the lower valley of the South and come into personal and intimate contact with the average negro, he will discover that the first really pressing problem to which society should devote its energy is to help the negro live decently, virtuously, and efficiently at home. He will be convinced that the rare negro, the half-breeds, and the octoroons he sees in the central and northern sections of the country do not represent the race and are an infinitesimally small fraction of it. He will learn that the day is far removed from this generation when equality with this child race in the service of this Government should be encouraged or tolerated.

After such an experience it will require 10 years of study and theorizing for Mr. Villard to square his present theories with the facts of the case. He would then not only be in favor of putting the negro clerks on the back seats, which he now complains of, but he would place them in separate buildings or, better still, have them enter the industrial fields of endeavor where the Almighty by the stamp of color decreed they should be. He should not hold the Democratic Party responsible for the wisdom of the Almighty.

Would Mr. Villard or any other white man suggest a negro being President of the United States, in the President's Cabinet, on the Supreme Bench, or a Member of the House or the Senate? The average negro himself would not suggest such an absurd proposition. Would Mr. Villard or any other good white man be willing for his sister or his daughter to marry a negro? Thus by the logic of facts the negro's position in society and in the Republic is circumscribed, graded, limited. It is, then, a question of information as to what his proper limitations should be. For negroes and whites to occupy the same worktables, the same bathrooms, and use the same towels is the beginning of social equality which the majority of the people of this country will never permit. The Government has no right to break down established social standards.

Every informed and right-thinking white man, while sympathizing with and anxious to help the negro in his place, recognizes the necessity of preserving the integrity and the supremacy of the white race. No nation ever destroyed itself, except by amalgamating with an inferior race. The United States is peculiarly commissioned to lead all other nations, not only in the purity of race-quality but in world problems of just and wise Government.

It is time for thinking people everywhere to find themselves in relation to the race problem. It is our duty to help the negro by making him proficient in his own sphere and by giving this child race a correct idea of his proper circumscribed position in society and in the Republic.

If the practice of race equality established by the Republican Party is not changed, it will result in irreparable injury to both races, and ultimately destroy the efficiency of the public service. Self-respecting proficient white men and women will be driven from the service of the Government.

But however "crude the policy" seems to Mr. Villard, segregation of the races is certain to come. Every white man, regardless of his politics, at heart believes in the segregation of the races when it affects his own family, and for every negro vote a party loses by segregation it will gain ten white votes. The dominant party of the future in the United States will be a white man's party. Will the Democrats continue their brilliant record by standing erect to meet the emergency?

Weighing of Mails.

EXTENSION OF REMARKS
OF
HON. JAMES T. LLOYD,
OF MISSOURI,
IN THE HOUSE OF REPRESENTATIVES,
Wednesday, October 29, 1913.

Mr. LLOYD introduced the following bill; which was referred to the Committee on the Post Office and Post Roads and ordered to be printed:

A bill (H. R. 9071) providing for the annual weighing of the mails.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That hereafter, in order to readjust the compensation on railroad mail routes as provided by law, the Postmaster General shall have the mails weighed simultaneously in all sections of the country annually, for not less than 30 successive working days selected by the Postmaster General, as shall represent most nearly the average weights for each annual period as shall be fair and just to both the Government and the railroads, such weights to be taken by employees of the Post Office Department, except the Postmaster General may require contractors on railroad mail routes, where practical for regularly employed force at railroad stations to weigh the mail, to have such employees take and report the weights upon forms provided and under regulations prescribed by him, all such railroad employees being sworn, and for this purpose all postmasters are hereby empowered to administer oaths on forms provided by the Postmaster General.

Mr. LLOYD. Mr. Speaker, I wish to call attention to a bill which I have introduced, which provides for the annual weighing of mails for the purpose of ascertainment of the pay which the railroad companies should receive for carrying the mails.

This proposed bill serves to dispense with the postal train weighers and have the work done by the employees of the railroad companies instead.

In the last four-year period there were 3,260 persons employed during the weighings; this bill will authorize the Postmaster General to require the railroad companies to have their agents weigh the mails, where their regularly employed station forces can do the work, thereby saving to the Government, based upon the number of weighers in conducting the general weighing covering the whole country in the last four-year period, $1,026,900.

The second purpose of this bill is to reduce the period of weighing from 105 days to 35 days, thus reducing two-thirds the cost of the station weighers and tabulators necessary to be employed by the Government where the volume of work requires special employees, particularly in the large cities and the junction points, and where the Postmaster General, for the purpose of checking or verification, may deem it expedient to have such employees. In other words, the weighing of the mails for 35 days will only cost one-third as much for station weighers and tabulators as if the mail were weighed 105 days, as required at present.

The third achievement of this bill will be to provide an annual weighing of the mail instead of quadrennial, and thereby secure a more correct estimate of the weight of mail actually carried.

Beginning with 1867, by direction of the Postmaster General, the mails were weighed for "30 consecutive working-days," and the act of Congress, March 3, 1873, fixed the period not less than "30 successive working-days." The act of March 3, 1905, extended the weighing period to not less than "90 successive working-days."

There is but one purpose to be attained by the period of weighing, and that is an average period for the year that is fair to the Government and the railroads. It is not believed to be necessary at all that the weighing shall last 105 days, which the law fixes as the minimum, not the maximum, period.

There is no doubt that an average period of not less than 30 successive working-days can be selected by the Postmaster General, in the discretion which he has, or which could be fixed, if Congress desired, in the act itself.

The present system has caused a wasteful expenditure of public funds, because the desired result can be effectively secured by weighing for a shorter period.

The mails should be weighed simultaneously throughout the country for two main and obvious reasons, namely, to avoid duplication of weights and the paying of two railroad companies for the transportation of the same identical mail, and also to prevent duplication of Government expense for weighers at the large terminals and duplication of tabulating force.

The railroad companies weighed the mail until the act of March 3, 1875, which required that the Postmaster General have the weights taken by employees of the Post Office Department.

Under the present plan the Post Office Department employs weighers on the mail trains, station forces at large terminals and junction points where the volume of mail is heavy, and in some instances requires the postmasters to report weights on small routes.

Under the proposed plan all the weights would be taken at the railway stations or at the small places where there are no agents or at hours when agents are not on duty by the postmasters. The train weighers would be dispensed with altogether, but the Government would continue to employ the extra force necessary at the large terminals and junctions.

The weighing at stations should be more accurate than the weighing on the cars. At stations the weighing would be under stationary conditions, whereas on the trains the motion and vacillation of the car pulls the dial on the scale up and down, and exact accuracy can not well be secured.

The difficulty of weighing on the trains will be accentuated with the volume, character, shapes, and weights of parcel-post mail, some of which is not included in sacks and can not well be weighed on a spring-balance scale; particularly will this be true with the increase to 20 pounds in weight within the second zone.

There is, of course, but one purpose to be secured by the weighing, and that is the true and correct weights of the mail carried, and Congress should be solicitous that the plan provided should protect the Government on the one hand and secure to the railroad companies on the other the compensation properly due under the law.

As to the practicability of the plan, no objection could well be raised. It is self-evident that the weights could be taken at the stations of the mails put on and taken off better than on the train.

Perhaps the main question to be considered, therefore, is the policy in having the railroad agents take the weights. There might be valid objection to authorizing a plan under which the railroad companies might be required or permitted to take the weights on the trains, because in such a plan one individual on the train would take the weights on and off at the different stations, and it would be possible for that individual to carry out a plan of adding to the weights.

But under the proposed plan no such deception could be practiced. It will be apparent upon considering a practical illustration how difficult it would be to work out such a system of fraud. For example, take one of the most important mail routes in Missouri, from St. Louis to Kansas City. The weights put on and taken off would be reported by 45 intermediate agents and by Government weighers at St. Louis and Kansas City, the terminal points. In order to effect collusion it would be necessary that all these parties should be implicated, because every one of these agents and also the Government weighers at the terminals would not only have to participate in the collusion but each would have to know exactly what extent any weight padding were attempted.

This illustration shows the situation throughout the entire country. There is no possibility that 50,000 station agents and operators and other employees could, if they would, participate in conspiracies against the Government.

The railroads weigh the entire freight of the country, which is the basis for freight revenue and which amounted to $1,929,335,456 in the year ended June 30, 1911. There need be no hesitation about their weighing the mails to adjust compensation of less than 2 per cent of the gross compensation collected by the railroad companies through their agents.

But the very system itself safeguards the Government in the matter, because the railroads are paid on a basis of the daily average weights carried the length of the mail route. To secure this it is compulsory therefore that the weights taken on and the weights put off every train in each direction each day over the length of each mail route shall balance. There is therefore a self-proving automatic method, which will protect the Government and insure accuracy of weights.

In addition, the railroad agents are required to be sworn, and as a further precaution, although not provided for in the proposed law, the Postmaster General could require, under the broad authority to issue instructions to govern the weighing, such supervision by the postmasters at each one of these stations as might be deemed expedient or necessary.

The plan of weighing has been worked out, with a view to eliminate in a practical way the great expense of conducting mail weighing under existing law. The plan is safe, practical, and efficient, and would greatly reduce the cost of ascertaining the weights of mail.

During the last four years there were employed 3,260 weighers for 105 days, at $3 per day each, a total cost of $1,026,900.

There were employed 840 station weighers for 105 days, at $2.50 each, $211,050.

There were also employed 372 tabulators for 105 days, at $3 per day, $117,180.

A total cost of $1,355,130; an average annual cost of $338,702.50.

Under the proposed law the train weighers would be eliminated; station weighers would be employed only 35 days, which would cost $70,350.

Tabulators would be employed for 35 days and would cost $39,060, a total annual cost of $109,410, or less than one-third the present cost.

I submit this statement for the consideration of the membership and hope the proposed scheme will be fully investigated. I am sure that it is the most effective and economical plan that has yet been suggested.

The Banking and Currency Bill.

EXTENSION OF REMARKS
OF
HON. COURTNEY W. HAMLIN,
OF MISSOURI,
IN THE HOUSE OF REPRESENTATIVES,
Saturday, November 1, 1913.

Mr. HAMLIN. Mr. Speaker, on one occasion Paul referred to himself as an apostle "born out of season." I have sought this opportunity to raise my voice in indorsement of what is known as the administration measures somewhat out of season, but I deem it a sufficient apology to remind the House that during the time you were considering the currency bill I was at home watching anxiously at the bedside of our daughter, who was critically ill of typhoid fever.

I regretted very much, indeed, that I could not be here to participate in its consideration and to have the pleasure of voting for that bill. I am, however, consoled by the fact that my vote was not needed, for it received a majority in this House of 201 votes, many Republicans very wisely voting for it. I will not attempt to discuss that bill now, inasmuch as it is being considered by another branch of this Congress, but I will say that I am convinced that the rank and file, men of all classes of business outside of the big business interests, who have given attention to this measure are in favor of its speedy enactment into law. And I am also quite sure that men of all parties engaged in all kinds of business throughout the country districts are anxious for a speedy passage of some currency measure.

Another thing I am thoroughly convinced of is that the people have confidence in the President. They not only believe that he is capable to deal with these great questions, but they believe that he is the friend of all the people and that he has the courage to stand firm for what he believes to be right.

Mr. Speaker, why should not the people have faith in President Wilson? No President, I dare say, in the lifetime of the oldest man has had so many vexatious and tremendously important questions to deal with as has our President. He has met all these great propositions with a directness, firmness, and intelligence that has won the faith and love of the people of our own country and challenged the admiration of the world. Our political foes started out with the idea that he was only a schoolteacher, unlearned in statecraft, and would therefore be unable to keep up with the procession. Now they have shifted sail and complain that he leads, dictates, and by sheer force compels Congress, against its will, to enact certain legislation.

Mr. Speaker, neither of these statements are accurate—certainly not the first—and if it could fairly be said that he forces Congress to enact a tariff and currency law he would only be insisting on us doing what he and his party promised the people we would do. Certainly Democrats ought not to complain if the President insists that we keep our promises to the people. Neither ought our Republican friends complain at the enactment of this wise and salutary legislation, for it will, like the rain, inure to their benefit as well as ours. Of course I know that the idea of a political party keeping its promises to the people is something new and novel to our Republican friends. They never did it while in power, but we are doing it, and we are going to continue to do it, at least while Woodrow Wilson is in the White House, and our friends across the aisle may as well get used to it. Like Uncle Tommy Maxwell's horse, when harness with a crupper was first put on, it objected to the crupper. Uncle Tommy said to the horse, "Whoa, Bill; you'll have to stand it; it is a part of it." Keeping our promises are a part of our program, and you Republicans will have to stand it. You complain that the President dominates and controls the majority in Congress. When you were in the majority big business controlled you. You promised the people in the 1908 campaign a revision of the tariff downward. Big business forced you to revise it upward. You promised the people currency legislation. Big business forced you to ignore that promise.

We promised the people in the 1912 campaign that if intrusted with power we would revise the tariff downward and enact a graduated income-tax law so as to make the wealth of the country pay its just share of the taxes, revise the currency laws of the country, give the Philippines their independence as soon as practicable, and so forth. We had four years in which to redeem these promises; but within the first six months from the time we went into power we had completely redeemed two of these promises and have the other two well under way for speedy fulfillment. Did any party ever make so splendid a record? Do you wonder that the country has faith in Woodrow Wilson?

We have accomplished more already in this extra session for the good of the country than the Republicans ever accomplished in any one Congress in the last 50 years, and yet for political effect they pretend to complain because the House is in virtual recess now waiting on the Senate.

My Republican friends, "lest we forget," let us go back just four short years to the extra session of 1909, when you were in control of the Government. You undertook to revise the tariff. I know it is almost cruel to even call attention to the enactment of the Payne-Aldrich tariff law. It is dead, dead, dead—Glory be! But let us take a look into the official record and see what you did while the Senate was considering that bill. The House passed that bill on April 9. It never came back to the House until July 30.

During that 3 months and 21 days the House was in session as follows:

Monday, April 12, in session 2 hours and 15 minutes.
Thursday, April 15, in session 10 minutes.
Monday, April 19, in session 10 minutes.
Thursday, April 22, in session 5 minutes.
Monday, April 26, in session 45 minutes.
Thursday, April 29, in session 8 minutes.
Monday, May 3, in session 11 minutes.
Thursday, May 6, in session 20 minutes.
Monday, May 10, in session 35 minutes.
Thursday, May 13, in session 46 minutes.
Monday, May 17, in session 5 hours and 17 minutes.
Thursday, May 20, in session 2 hours and 41 minutes.
Monday, May 24, in session 5 minutes.
Thursday, May 27, in session 2 hours and 27 minutes.
Friday, May 28, in session 4 hours and 26 minutes.
Tuesday, June 1, in session 2 hours and 10 minutes.
Thursday, June 3, in session 13 minutes.
Monday, June 7, in session 45 minutes.
Thursday, June 10, in session 3 hours and 5 minutes.
Monday, June 14, in session 11 minutes.
Thursday, June 17, in session 9 minutes.
Monday, June 21, in session 24 minutes.
Thursday, June 24, in session 2 hours and 53 minutes.
Monday, June 28, in session 3 hours and 8 minutes.
Thursday, July 1, in session 35 minutes.
Monday, July 5, in session 12 minutes.
Thursday, July 8, in session 9 minutes.
Friday, July 9, in session 3 hours and 26 minutes.
Monday, July 12, in session 5 hours and 34 minutes.
Thursday, July 15, in session 5 hours and 22 minutes.
Tuesday, July 20, in session 5 hours and 15 minutes.
Friday, July 23, in session 5 hours and 17 minutes.
Tuesday, July 27, in session 1 hour and 5 minutes.
Thursday, July 29, in session 49 minutes.
Friday, July 30, in session 3 minutes.

Here conference report came into the House, called up by Mr. PAYNE.

Congress met 37 times in 111 days, and was in session an average of 30 minutes each session. The gentleman from Illinois [Mr. MANN] was one of the leaders of the majority at that time. Why did he not make the House work then?

You were so afraid that Congress might do something during those 111 days of idleness you refused to appoint the standing committees of the House, thereby rendering it impossible for work of a general nature to be done. We have appointed the committees this session, and while I am not authorized to speak for all the committees, many of them have been at work.

I know that the committee of which I am chairman has worked, and with the result that the International Banking Corporation of New York has just been held by a decision of the Comptroller of the Treasury to be indebted to this Govern-

ment in the sum of $111,000, which it improperly retained while acting as our fiscal agent in the collection of the Boxer War or Chinese indemnity fund.

Our Republican friends are playing politics, they think, in requiring the roll of the House to be called each day. Their purpose is to expose the Democrats who are absent; but, like the ostrich, which thinks itself hid when its head is buried in the sand, expose themselves. The roll calls show that out of 145 Republican Members there are only about 30 here to answer to their names. I wonder where the other 115 are.

I will say to our Republican friends who are clamoring for a chance to work—for political effect only—that we will soon give you plenty of opportunity to get busy.

We will doubtless give you an opportunity to help us revise the antitrust laws, immigration laws, pure food and drug act, provide for Federal aid to good roads, and numerous other things needed to keep pace with this rapidly developing country.

The Late Adolphus Busch.

EXTENSION OF REMARKS
OF
HON. L. C. DYER,
OF MISSOURI,
IN THE HOUSE OF REPRESENTATIVES,
Tuesday, October 28, 1913.

Mr. DYER. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include a speech delivered by ex-Secretary of Commerce and Labor Hon. Charles Nagel, at St. Louis on the 25th instant, at the funeral of the late Adolphus Busch.

The speech is as follows:

"The life of a great man, not unlike a great composition of music, appeals to and is understood by all the people. We touch the prevailing note, and with more or less understanding of the subordinate tones we appreciate and we comprehend.

"This is the meaning of this manifestation of universal sympathy in our city, in our State, in our country from border to border, and far beyond. The people who come forward from the humblest peasants to the advanced professional and commercial men and accompany the casket from Langenschwalbach, the crews of the trains on the other side and this, the people who manned the ship from cabin to the last stewardess, the people who stood assembled here on a rainy night when we returned, all felt the same sympathy in the loss of Adolphus Busch, and all of us are seeking to say the same thing.

"But that is not for this hour. It is not so much at this time that adequate words or eloquent language be found to give a fair estimate of the life of Adolphus Busch.

"In this hour the family rules, and they would have some one speak who knew and felt in the past years all that which we now would be glad to have stated.

"The real tribute to the life of Adolphus Busch will be paid in after years when judgment will come to the aid of warm sympathy to give us the outlines of his real achievements in sharper language.

"But this much may be said even now: Adolphus Busch was a giant among men. Like a descendant of one of the great, vigorous, and ancient gods, he rested among us, and with his optimism, his far-seeing vision, his undaunted courage, and his energy, he shaped the affairs of men.

"Not a great reader of books, he was acquainted with the great book of life as few men are.

"Instinctively his mind traveled the true course, received and welcomed the good message, weighed and accepted the wise counsel, and threw his tremendous influence invariably to the right side of every human conflict.

"Never a visionary, he was always an optimist who could smile away the errors of a day in the triumph and the success of a lifetime.

"He believed in the ultimate progress of the world, he believed in the ultimate good of man, and he based all his activity and all his conduct upon that belief. He dared to appeal for all he stood for and for all which is good in human nature, and that was the meaning of his success.

"He believed that the people ultimately wanted that which is right and that they were ultimately entitled to that which is right.

"This was the secret of his success, and this was the meaning of his relation to all his men and to all his associates. His relation with the men in his employ was unlike anything we knew; it was a personal relation, and if his advice and his counsel had been heeded and generally accepted our statute books would not be borne down to the humiliating confession of man's inhumanity to man.

"That was the meaning of his charity. In private he gave not to create dependents, but to set free; and in public charity he gave to encourage open-minded men and women, to set free thought and conduct, and to promote good will to all the world.

"Every gift he made and everything he did was in part his own heart and his own mind and his own soul, and that is what made the giving worth the while.

"By influence he became more than a citizen of the city of St. Louis; without title and without public station he became a national figure.

"He could go to no city or to no hamlet without being recognized and welcomed through the broad country, and his reputation traveled beyond the confines of our own country, because true and loyal to his adopted country he never surrendered sentiment, sympathy, and friendship for his native land, as no true man would.

"He endeavored by conduct and by donations to further and cement the intimate relations between the countries, confident, as he thought, that what helped one was bound to redound to the advantage of the other.

"Such was his life, strange beginnings at activity, a struggle for success, with generosity and good will for all his fellow men, and thus he fought and labored to the last.

"Even in his last days he embarked upon large enterprises, confident that the responsibility would be met by his successors. In the last declining days he sent messages of solicitude to friends from whom he had not heard; in the last days he made provision in large funds for those who had carelessly subjected themselves to the danger of being wrecked, and in the last days there came such messages, received only after death here, in which he said, in that characteristic manner of his in a marginal note to his son: 'Here is a letter from someone whom once I knew and had forgotten, who is now in distress. We must see to it that that distress is relieved. Never forget a friend.' That was his life, that was his way of doing.

"Having done these things, to the last day consistent with his own rule and his own life, knowing that the end was approaching, with words of tender devotion to the partner of his life, a rare example of helpfulness and intimate affection and devotion, with words of wise counsel and injunction to his son, his chosen successor, with all-embracing affection to all the members of his family, he sank back in his chair, closed those luminous, wonderful eyes and went to sleep with the peace of an unsuspecting child.

"We ask ourselves, Did we know him? Perhaps a few of us did, but not quite. All of us together knew him; each of us admired his frankness, his ability, his optimism, his magnetism, his sense of humor, his unconquerable devotion and loyalty to friends; altogether we felt for him as he felt for us, and we knew that he cherished the place which we have assigned to him in our own heart of hearts.

"Perhaps those who were in his immediate surroundings, and those who were associated with him in his work, were alone able to follow the working of his mind.

"There were few of them who did not at times meet the severity of his judgment; but there was none, I trust, who did not again and again feel the inspiration, the compensation of quiet approval which no man knew how to give as he did.

"In the days of his full strength and vigor Adolphus Busch was master. There was no man in all his enterprises who in any branch or phase of them was his equal.

"Not by way of power, but by superiority did he rule. But the real triumph of his life came through adversity, when the full nobility of his character was demonstrated. Most men situated as he was would have given their full strength and time to the contemplation of self.

"He displayed an energy and determination in resisting an unconquerable foe for years; and while he appreciated the service which those he had trained and those on whom he had relied for years rendered to him, he nevertheless kept abreast of all his undertakings and to the last gave directions for every step, embarked upon new enterprises, and extended his generous gifts and assistance as he had in earlier days.

"But, better than all, he showed a serene philosophy; suffering himself, he bore with patience, and extended magnanimity to those around him who had failed.

"Generous, considerate, giving back his sense of humor to every man who was privileged to come within his circle, so that in those years his family, its members, were at last given an opportunity to do for him as they had never had to before, when he, with that wonderful smile of his, that undying good nature and humor of his, bestowed upon them during those years the greatest gift of his life.

"A life going out in that fashion is a great charge for those who are left to mourn. Although embarking in new plans up to the last moment, he left his successor with great responsibility.

"As to gifts, he was his own executor. He did what he wanted to do. He enjoyed giving. He loved success, and he loved to share it with others. He has given what he leaves to those who succeed him with the privilege and the opportunity to enjoy as he had. Confiding still where the confidence had once been rigid, he intrusted to them the protection of his fortune and his fair name.

"The end has come; the light is out. The inimitable smile, the wonderful, far-away look of that eye have faded; but the remembrance of them will live; their influence will live, as the members of his family will seek and find their happiness in obedience to the unspoken injunction of the great life of Adolphus Busch."

Pending Problems in Federal Legislation.

EXTENSION OF REMARKS
OF
HON. ROBERT N. PAGE,
OF NORTH CAROLINA,
IN THE HOUSE OF REPRESENTATIVES,
Saturday, November 1, 1913.

Mr. PAGE. Mr. Speaker, under the leave granted me to extend my remarks in the RECORD, I include an address of Hon. ROBERT LEE HENRY, of Texas, before the South Carolina Bar Association on January 24, 1913.

The address is as follows:

PENDING PROBLEMS IN FEDERAL LEGISLATION—ARGUMENT AGAINST INTERLOCKING DIRECTORATES AND VOTING TRUSTS AND FOR PROPER REGULATION OF INTERSTATE CORPORATIONS.

Address of Hon. ROBERT LEE HENRY, of Texas, before the South Carolina Bar Association on January 24, 1913.

Mr. President and members of the South Carolina Bar Association:

The invitation to address this association is one of the greatest honors that has ever come to me during my public career, and I shall endeavor to justify your courtesies by uttering no unworthy word here to-night. For the first time coming to a State whose history is replete with patrotic deeds, statesmanship, and the fame of distinguished lawyers I am thrilled with the obligation of the hour and am not unmindful of the duties resting upon our honorable profession. In the course of my remarks there shall be no tinge of rancorous partisanship, but the times demand that I speak in candid and courageous fashion while treating the pending problems in Federal legislation, which is my theme for the evening.

Never in our history did the solution of public questions call for greater patriotism and braver speech than now. Clinging to the Constitution as fashioned and handed down by South Carolina's immortal men, in conjunction with those of her sister States, I shall deal with the great Federal issues now demanding solution in no reneered and dubious language. With that immortal instrument as my chart and guide I shall speak as one who loves his country and her institutions.

OUR ANTITRUST ACT.

Monopoly first began to prey upon the people in the time of Queen Elizabeth. Privileges of monopoly were granted by her to courtiers and servants till they became intolerable and were terminated by the wrath of the people in the enactment of the "statute of monopolies" in 1624. Our antitrust act is but the outgrowth of the spirit against monopolies which secured the passage of those ancient laws. Twenty-five years ago gigantic monopolies and conspiracies against trade in alarming proportions began to infest this country. Such types as the Standard Oil Trust, the Sugar Trust, and the Beef Trust raised their heads and began to gnaw at the vitals of commerce and trade. The people demanded their utter destruction, with no spirit looking to moderation of their ravages. In obedience to that demand, Congress passed what is known as the Sherman antitrust law, and on July 2, 1890, it was approved by Benjamin Harrison, the President.

THE SHERMAN ACT.

It has been construed in more than a hundred decisions, and the Supreme Court has held its provisions clearly constitutional. It has never been amended and should not be repealed. It can be supplemented and bettered. Every citizen should hug it to his bosom as a Magna Charta among our Federal statutes. This act came into being after months of profound study and by practically unanimous consent in the Congress of the United States. It is the Nation's will, and court and citizen should respect and uphold it.

Its origin and history are most interesting. The principles embraced in its provisions should be accredited to Senator Sherman, whatever critics may claim to the contrary, for on December 4, 1889, he introduced Senate bill No. 1, entitled "A bill to declare unlawful trusts and combinations in restraint of trade and production." This was the beginning of the struggle against monopoly in Federal legislation, out of which the final bill emerged after various processes of amendment. History should record the truth and set this legislation down to the credit of the Ohio statesman. And patriots of whatever persuasion should preserve and perfect it to meet the emergencies of the hour.

The original Sherman bill, in section 3, denounced violations of its provisions as a felony and provided for "imprisonment in the penitentiary for a term of not more than five years, or both * * * fine and imprisonment, in the discretion of the court." We are not to-day more extreme than Senator Sherman, and yet the trusts and monopolies have increased a thousandfold in numbers and enormity of greed since his day.

On January 14, 1890, Senator Sherman reported his bill to the Senate, and it was there considered from week to week. On March 21, 1890, he reported from the Committee on Finance a substitute for his original bill. Whereupon Senator Reagan, of Texas, offered a substitute for the Senate committee's substitute. His bill set out at great length the acts constituting a trust and conspiracy against trade, and bristled with luminous and efficient definition. It, too, denounced violations of its provisions as a felony, and in certain and comprehensive language provided penalties. The pending amendments were considered on various occasions in the Senate, and on March 25, 1890, by a vote of 30 yeas to 12 nays, the Reagan substitute was added to the Sherman bill. On March 27, 1890, the Senate again resumed consideration of the bill, and upon motion of Senator Walthall, of Mississippi, the entire subject was referred to the Committee on the Judiciary.

THE SUBSTITUTE.

On the 2d day of April, 1890, Senator Edmunds reported a substitute of eight sections for the original bill and amendments. That substitute was and is the identical Sherman law of to-day. No matter what Senator wrote this or that language in the final draft, it was, after all, the culmination of the purpose and genius of Senator Sherman, whose inspiration was to reach and strike down monopolistic spirit abroad in the land. In multifarious forms the Senate considered the substitute reported from the Judiciary Committee. It passed that body and then went to the House. It there passed with amendments and went through two conferences, which finally struck out the amendments after debate clearly revealed that the act was understood to reach transportation companies doing an interstate business, and prohibited "every contract, combination in the form of trust or otherwise, or conspiracy in restraint of trade or commerce among the several States or with foreign nations," whether "reasonable" or "unreasonable." The conference report was agreed to, and the bill passed in exact form as reported by the Senate Judiciary Committee. By unanimous vote of 240 ayes the House passed the bill on June 20, 1890.

In closing the debate in the House, Mr. Stewart, of Vermont, said:

The provisions of this trust bill are just as broad, sweeping, and explicit as the English language can make them to express the power of Congress on this subject under the Constitution of the United States.

Inflexible rules of reason and logic inevitably lead to the conclusion that its very first section prohibits "every combination in restraint of interstate or international commerce."

FIGHT BY THE TRUSTS.

The law having passed and the people vindicated in their demands for such legislation, the struggle on the part of the trusts to undo the achievement began. The first conflict came in the Knight case, which was lost to the Government on account of bad pleading and mismanagement on the part of the governmental officers. Emboldened by this accidental success, the trusts increased their defiance of the national will and prepared for further conflict in attacking the law.

JUSTICE PECKHAM'S DECISION.

Next came the case of the United States against Freight Association, decided by the Supreme Court in 1890. Justice Peckham,

in a luminous decision, upheld the constitutionality of the law, which was vigorously assailed by trusts and monopolies.

He said:

When, therefore, the body of an act pronounces as illegal every contract or combination in restraint of trade or commerce among the several States, the plain and ordinary meaning of such language is not limited to that kind of contract alone which is in unreasonable restraint of trade, but all contracts are included in such language and no exceptions or limitations can be added without placing in the act that which has been omitted by Congress.

He said further:

In other words, we are asked to read into the act by way of judicial legislation an exception that is not placed there by the lawmaking branch of the Government. * * * This we can not and ought not to do.

And in patriotic language he adds:

If the act ought to be read as contended for by defendants, Congress is the body to amend it and not the court by a process of judicial legislation wholly unjustified.

The majority of the court agreed and upheld the law as written by Congress. Justice White registered his dissent stoutly, contending that the word "unreasonable" should be interpolated immediately before the word "restraint." He courageously took his stand in 1896, and the opinion speaks for itself.

Not content with this defeat, the trusts and monopolies renewed the attack for the purpose of dismembering the law and thwarting the will of the people. In 1898 the Supreme Court decided the case of the United States against the Joint Traffic Association. Again, Justice Peckham delivering the opinion of the court, the constitutionality and validity of the statute were sustained. In emphatic language the court reaffirmed the decision in the case of the Trans-Missouri Freight Association and rensserted that the word "unreasonable" can not and must not be supplied before the word "restraint" in the act.

WHAT THE COURT SAID.

The court said:

This court with care and deliberation and also with a full appreciation of their importance again considered the questions involved in its former decision. A majority of the court once more arrived at the conclusion it had first announced, and accordingly it denied the application. And now for the third time the same arguments are employed, and the court is again asked to recant its former opinion and to decide the same question in direct opposition to the conclusion arrived at in the Trans-Missouri case. * * * As we have twice already deliberately and earnestly considered the same arguments which are now for a third time pressed upon our attention, it could hardly be expected that our opinion should now change from that already expressed.

And so in 1898 Justice White again dissented. The decisions were reaffirmed in numerous instances and became the settled rule of conduct. In 1907 the court again reaffirmed the decision in the Joint Traffic and Freight Association cases and said, in the case of the Shawnee Compress Co. v. Anderson (209 U. S. Rep.):

It has been decided that not only unreasonable but all direct restraints of trade are prohibited, the law being thereby distinguished from the common law.

And with emphasis the Supreme Court said in the Northern Securities case:

All contracts of that character, whether they are reasonable or unreasonable, are prohibited.

THE WORD "UNREASONABLE."

The trusts and monopolies meantime became disheartened at the action of the courts and subtly approached another forum. They came to Congress and caused a bill to be introduced supplying the word "unreasonable" where they had failed to insert it by judicial amendment. This bill was introduced at the second session of the Sixtieth Congress, in 1909. In the face of the decision of the courts, the bill proposed "that no prosecutions under the first six sections should be maintained for past offenses unless the contract or combination be in 'unreasonable' restraint of trade or commerce." The Senate Committee on the Judiciary, reporting against this proposed amendment, as well as others equally untenable, said:

To amend the antitrust act as suggested by this bill would be to entirely emasculate it and for all practical purposes render it nugatory as a remedial statute. Criminal prosecutions would not lie, and civil remedies would labor under the greatest doubt and uncertainty. * * * To destroy or undermine it at the present juncture, when combinations are on the increase and appear to be as oblivious as ever to the rights of the public, would be a calamity.

Thus appealing to the courts and Congress to amend the act by writing the word "unreasonable" therein, dismal defeat in every effort met the emissaries of the trusts and monopolies.

From the first decision on this statute to the oil and tobacco cases, the courts have strongly held that the mere tendency to stifle competition brought the acts within the prohibition of the law, regardless of the fact whether such acts were reasonable or unreasonable. All reasonable citizens agree that ordinary purchases and sales, formation of partnerships and honest corporate organizations do not violate the Sherman Act, although by incidental effect that may restrain as between parties interstate or foreign commerce. Monopoly is not constituted by size alone. The act is not violated where persons or corporations attain dominancy in business by normal and honest methods of enterprise. Such acts and agreements lack the elements of conspiracies constituting monopoly, combination, and intent to destroy competition and restrain trade.

WHAT "AGREEMENT" MEANS.

The Senate committee meant and the oil and tobacco cases mean, to state it in honest fashion, that the injection into the acts of whether an agreement or combination is reasonable or unreasonable renders it, as a criminal or penal statute, indefinite and uncertain, and hence nugatory and void and would be tantamount to repealing that part of the act. For there is no older and better settled principle of the law than the rule that there can be no crime unless the act is one which the party must know in advance is criminal. It must be definite and certain. Since the Supreme Court has amended the act by writing the word "unreasonable" therein, it may be well feared that the criminal parts can not be enforced.

The defense of reasonable restraint will be made everywhere and there are certain to be as many rules of what is reasonable as there are judicial forums in the country. The cases against the Standard Oil Trust and the Tobacco Trust had reached the Supreme Court in 1910. The trusts and monopolies rallied for one more effort in that forum and trained their guns against the provisions of the Sherman law. They made demand that the national will and legislative policy be thwarted by judicial amendment and that by a "modern rule of reason" only unreasonable trusts and monopolies be prohibited by law. Their advocates divided trusts and monopolies into "good" and "bad" and said the good ones are reasonable and only the bad ones can be unreasonable. Another battle was fought in the field of jurisprudence, and, with a changed personnel, the Supreme Court yielded to monopoly where thrice before they had refused to surrender. And in the year 1911, with a largely changed Supreme Court, the host of trusts and monopoly won a triumphant victory.

Before proceeding to state my views and analysis of the oil and tobacco cases, permit me to add that no man has a higher regard for the judiciary than that entertained by me. No patriotic citizen can afford to arouse prejudice against the courts. In the last analysis they are the palladium of our rights and liberties. Nor, on the other hand, should any reasonable man make a fetish of the judicial office. Judges are not above public opinion and criticism. Hence, fundamentally, I make no difference between the judicial and other offices, for they are all but creatures of the people's will and clothed with powers to be executed as trustees in behalf of the public under the Constitution and laws.

In the year 1911, after 15 years of weary waiting, Chief Justice White had his way and by a bare majority of one planted the decision of the court where he had stood in his dissenting opinion in 1896. In plain language he inserted the word "unreasonable" before the word "restraint," as he strongly contended was appropriate that year. In this judicial struggle it suits me to stand where the court stood in 1896, and where Justice Harlan took his stand in 1911. After exhaustive and patient study, my mind leads me to the inevitable conclusion that I must concur in the position assumed by that lamented justice, who in intellect ranks with America's greatest jurists.

WHAT JUSTICE HARLAN SAID.

In order that I may not transcend the proprieties of the occasion, permit me to reiterate what the public heard this eminent justice say in the debate occurring in the Supreme Court the day the opinions were handed down. He said:

With all due respect for the opinions of others, I feel bound to say that what the court has said may well cause some alarm for the integrity of our institutions.

Further along he said of the trusts and monopolies:

They at once set up the baseless claim that the decision of 1896 disturbed the "business interests of the country" and let it be known that they would never be content until the rule was established that would permit interstate commerce to be subjected to reasonable restraints.

With irrefragable logic he said:

The only answer which in frankness can be given to this question is that the court intends to decide that its deliberate judgment 15 years ago to the effect that the act permitted no restraint whatever of interstate commerce, whether reasonable or unreasonable, was not in accordance with the "rule of reason." * * * I have the authority of this court for saying that such a course of proceedings on its part would be "judicial legislation."

Then he adds:

I said at the outset that the action of the court in this case might well alarm thoughtful men who revered the Constitution. I meant by this that many things are intimated and said in the court's opinion which will not be regarded as otherwise than sanctioning an invasion by the judiciary of the constitutional domain of Congress—an attempt by interpretation to soften or modify what some regard as a harsh public policy. This court, let me repeat, solemnly adjudged many years ago that it could not, except by judicial legislation, read words into the antitrust act not put there by Congress.

Then, in patriotic warning, he threw out this statement, which is confirmed by my career as a representative of the people at Washington:

After many years of public service at the National Capital, and after a somewhat close observation of the conduct of public affairs, I am impelled to say that there is abroad in our land a most harmful tendency to bring about the amending of constitutions and legislative enactments by means alone of judicial construction.

WHAT ROOSEVELT SAID.

The opinion of the court in the Tobacco case reaffirmed the victory achieved in the Oil case. It added nothing new in the application of the law. Indicating the view taken by the country of these opinions, allow me to quote a flamboyant announcement from a distinguished ex-President. In the Outlook he said:

It is contended that in these recent decisions the Supreme Court legislated. So it did, and it had to, because Congress had signally failed to do its duty by legislating. * * * Where the legislative body persistently leaves open a field which it is absolutely imperative, from the public standpoint, to fill, then no possible blame attached to the official or officials who step in, because they have to, and who then do the needed work in the interest of the people. The blame in such cases lies with the body which has been derelict and not with the body which reluctantly makes good the dereliction.

Hamilton in his wildest dreams of absolutism never advanced the doctrine that the Supreme Court should legislate. Aye, more! This distinguished ex-President urges that not only shall the Supreme Court legislate where Congress fails to act or acts as he would not approve, but that executive officers and other officials shall make good the needed legislation by their action and usurpation. Away with such doctrine! Again I say, let us hug to our bosoms the Constitution of our fathers. Let the three departments occupy their spheres. Executive officers have no rights except those of executive character. Legislative officers have no prerogatives of power except those pertaining to legislation. Judicial officers have no rightful domain for exercise of their powers except in the judicial field. When they transcend that they should be scourged back by public opinion and criticism to their constitutional limitations, and the people invariably, with righteous indignation, should hold all officers within their corporate spheres. Any other view will wreck this Government, and we owe it to ourselves here and elsewhere to assert our conception of duty in courageous and candid action. This same gentleman in his article divides trust and monopolies into good and bad, scouts the idea of a return to wholesome laws of competition, and proposes in lieu thereof the combination of good trusts and monopolies and the supervision of all by a small governmental commission to regulate them and give the good ones certain freedom and license. These doctrines are vicious and against the genius of our institutions and civilization. Our duty is in the other direction.

We must, to preserve our liberties, return to the ancient doctrine of competition and decree that combinations must be destroyed and private monopoly perish from the earth. Never should we assert that these vast monopolies and trusts may seek refuge under the wings of a small governmental commission of men with thousands of cases piled before them in every conceivable form of litigation, where private litigants are too poor to assert their rights.

If it be said that the courts should be above just criticism and that we should not raise our voices as sovereigns against them, let me remind you that they have not always been regarded as inviolate by the American people.

THE DRED SCOTT CASE.

More than 50 years ago Chief Justice Taney rendered a decision that provoked criticism and drew that great tribunal into the maelstrom of violent public discussion. To illustrate the feeling then engendered, let me remind you of some things said and done at that time. Mr. Blaine says:

The aversion with which the extreme antislavery men regarded Chief Justice Taney was strikingly exhibited during the session of Congress following his death. The customary mark of respect in providing a marble bust of the deceased to be placed in the Supreme Court room was ordered by the House without comment or objection. In the Senate * * * the proposition to pay respect to the memory of the judge who had pronounced the Dred Scott decision was at once savagely attacked by Mr. Sumner. Mr. Sumner said: "Taney would be hooted down the passages of history and that an emancipated country would fix upon his name the stigma that it deserved. He had administered justice wickedly, had degraded the judiciary, and degraded the age."

Mr. Sumner's protest was vigorously seconded by Mr. Hale, of New Hampshire, and Mr. Wade, of Ohio. The former said that a monument to Taney "would give the lie to all that had been said by the friends of justice, liberty, and downtrodden humanity" respecting the iniquity of the Dred Scott decision. Mr. Wade avowed his belief that the "Dred Scott case was got up to give judicial sanction to the enormous iniquity that prevailed in every branch of our Government at that period."

He insisted that the people of Ohio, whose opinions he professed to represent, "would pay $2,000 to hang the late Chief Justice in effigy rather than $1,000 for a bust to commemorate his merits."

Mr. Sumner concluded the debate and said that in listening to the Senator from Maryland he was "reminded of a character known to the Roman Church who always figured at the canonization of a saint as the devil's advocate." He added that if he could help it "Taney should never be recognized as a saint by any vote of Congress." A vote was therefore abandoned on the 23d of February, 1865.

Nine years after these proceedings, in January, 1874, the name of another Chief Justice, who had died during the recess, came before Congress for honor and commemoration. All the Senators who had spoken in the previous debate were gone, except Mr. Sumner, who had meanwhile been chosen for his fourth term, and Mr. Wilson, who had been elevated to the Vice Presidency. The bill was passed without debate and with the unanimous consent of the Senate.

All these harsh things were said, although the decision was absolutely correct and has never been overruled.

RECALL OF JUDGES.

With proper regard and respect for the judiciary, I must assert that those officials are more responsible for the specter of the recall of judges stalking through the country than any other influence in the Republic. There would be lack of candor in my remarks if I failed to declare that in my humble judgment the action of the Supreme Court in nullifying long and well-established adjudications in the income-tax decision and the antitrust cases is almost entirely responsible for stirring up the living issue of recall. If the court had not uprooted their former decision and thereby defied the national will as expressed in congressional enactment and changed by judicial construction and amendment plain words and acts, recall sentiment would not be so rife this day. It is not fair to charge that what some choose to call the rabble, the masses, have altogether aroused this sentiment. I repel the impeachment and defend the right of the people to discuss and seek solution of these problems. Without here discussing the necessity and desirability of recalling judges, long since I have concluded that there should be a speedier and more effective remedy than the cumbersome process of impeachment where impeachment will not lie.

REMOVAL BY ADDRESS.

There should be the cumulative remedy of "removal by address" for nonimpeachable cases by a majority vote of the House and Senate, as is done in England and many States of the Union. This would go far toward putting the Government more directly in the hands of the people and vesting sovereign final action where it appropriately belongs. This method of dealing with judges unfit for office has evolved an almost perfect judiciary system in England, where the judges rank with the world's greatest, and has worked with magic effect in States where it has been adopted and whose judges are unrivaled by the other Commonwealths. It is therefore commended as a supplementary remedy for the ponderous method of impeachment.

REMEDY FOR THE DEFECTS.

Having thus briefly outlined the history of our Federal antitrust statute and judicial construction touching the same, permit me to point out some apparent defects challenging attention and remedy.

First, it is essential to safeguarding the people's rights that the Sherman law should be amended or supplemented so that the "rule of reason" written therein by the Supreme Court shall be entirely eliminated and place the meaning of the statute where the framers intended it should be. The language should be written in such plain and unequivocal fashion that courts will never hereafter construe the word "unreasonable" into the wording thereof, either before the word "restraint" or anywhere else in the act, so that he who runs may read therein that all restraints of trade and commerce by trusts and monopolies, whether reasonable or unreasonable, shall be forever prohibited.

Congress should proceed to speedily repeal the judicial amendment which has maimed this important law. The act should be retained with all its present efficiency without the slightest impairment. Contracts and combinations now prohibited by it should so continue under its prohibitions, but there should be further accurate definitions so as to define with the utmost precision acts constituting a trust, monopoly, and combination. There should be no doubt and uncertainty left either in the minds of the courts or the offenders, and those engaged in business should be apprised of the exact limits of their activities under the law.

PROVIDE ADEQUATE PENALTIES.

And then adequate penalties should be provided and the stigma of a felony placed upon violators, as first proposed by Sherman, Reagan, George, Walthall, Vest, and others. The penitentiary should be designated as the place of abode for a

term of years, ranging from 2 to 10 years, for those criminals who will not respect the majesty of this statute. We might not convict all offenders, but we would succeed in numerous cases and deter many from violating the law.

When the first act was passed there were not many trusts in existence. Amongst the larger ones were the Beef Trust, the Oil Trust, and the Coal Trust. Since that day they have grown until their capital stock amounts to billions and billions of dollars. With the Dingley and the Payne-Aldrich high tariff acts constituting a wall of protection around the Republic, our country has become a veritable breeding ground, seething and reeking with monopoly and combinations in restraint of legitimate trade and commerce. Two or three bankers in New York City have accumulated vast amounts of wealth and have taken under their wings the great railroad and industrial corporations of the country and are manipulating their finances. They run the daily balance in those banks to hundreds of millions of dollars. Four or five years ago these corporations and trusts deposited their funds in the localities where domiciled. But now they are compelled to pile up their deposits in these banks, under whose complete dominion they are now conducting their affairs. So manifest is this concentration and abuse that more than two years ago, before the startling developments were made before the Pujo Money Trust Committee, an eminent American statesman, Woodrow Wilson, said:

The great monopoly in this country is the money monopoly. Our system of credit is concentrated. The growth of the Nation, therefore, and all our activities are in the hands of a few men, who, even if their action be honest and intended for the public interest, are necessarily concentrated upon the great undertaking in which their money is involved, and who necessarily, by very reason of their limitations, chill and check and destroy genuine economic freedom. This is the greatest question of all, and to this statesmen must adjust themselves with an earnest determination to serve the long future and the true liberties of men.

These were brave words, and we should proceed to take them as their meaning implies.

TESTIMONY OF MORGAN.

J. Pierpont Morgan and his partner, George F. Baker, admitted before a committee in Washington that they dominated and controlled practically all of the great interstate railways and industrial corporations and trusts through interlocking directorates, voting trusts, and various financial conspiracies. They have solemnly sworn before the congressional committee at Washington that in the aggregate they hold 385 directorates in 41 banks and trust companies, having total resources of $8,832,000,000 and total deposits of $2,834,000,000; 50 directorships in 11 insurance companies, having total assets of $2,646,000,000; 155 directorships in 31 railroad systems, having a total capitalization of $12,193,000,000 and a total mileage of 163,200; 6 directorships in 2 express companies and 4 directorships in 1 steamship company, with a combined capital of $245,000,000 and gross income of $97,000,000; 98 directorships in 28 producing and trading corporations, having a total capitalization of $3,583,000,000 and total gross annual earnings in excess of $1,145,000,000; and 48 directorships in 19 public utility corporations having a total capitalization of $2,826,000,000 and total gross annual earnings in excess of $428,000,000; in all, 746 directorships in 134 corporations, having total resources or capitalization of $25,325,000,000. To put it in perhaps more graphic form, it has been established before the Pujo committee and Morgan, Baker, and their allies forced to there admit, that a phase of their conspiracy and Money Trust may be fairly put as follows:

THE GREAT SEVEN.

The following seven institutions have total resources of $1,398,000,000: J. P. Morgan & Co. (and Drexel & Co.), deposits, $163,000,000; Guaranty Trust Co., $292,000,000; Bankers' Trust Co., $205,000,000; First National Bank, $149,000,000; National City Bank, $247,000,000; Chase National Bank, $125,000,000; National Bank of Commerce, $190,000,000; that the Mutual and Equitable Life have combined resources of $1,001,000,000, making a total in these nine institutions of $2,489,000,000. The business of making large issues of securities of the great interstate corporations has during the past five years been conducted mainly on joint account between J. P. Morgan & Co., the First National Bank, and the National City Bank of New York; Lee Higginson & Co. and Kidder, Peabody & Co., of Boston; and the Illinois Trust & Savings Bank and the First National Bank of Chicago. This only partially illustrates their tremendous concentration of money and credit. Are, more, not only do these gentlemen and their allies dominate business and finance, but they have grasped the reins of government and have given us a government by and for the trusts. Candor compels me to say that you may compare with fairness these identical men who control the Money Trust and they square completely and exactly with the names of those who financed the presidential campaign of 1904 for The Outlook editor, who now believes in emasculating the Sherman law by judicial amendment. The names of Morgan, Rockefeller, Stotesbury, Rogers, Archbold, Perkins, and others are found in the Money Trust group and the Political Trust group and fit into one another as the hand in the glove. Proof before the Pujo committee and the Clapp election committee reveal these two groups as being similar and joined together as the Siamese twins; and yet they are one and the same coterie. These things were first denied, but established by proof before these committees; all confess them.

INTERLOCKING DIRECTORATES.

George F. Baker, one of Morgan's partners and allies in the Money Trust, said at Washington that the banking credit of the country, amounting to $23,000,000,000, is virtually under complete sway of a small group of men in New York; that the leading banks, because of interlocking directorates, act in harmony in the control of large transactions; that the Nation's transportation interests in the same manner are under concentrated control and that the vast industrial enterprises are likewise dominated by this all-powerful association. He proudly boasted and explained the various devices employed to evade the law, or, as he phrased it, to "conform with the law." He admitted that in 50 years his single bank had collected $86,000,000 of profits upon a $500,000 capital; that banks were consolidated despite the law, through the creation of holding companies; that there is a certain "concentration of power, in which Mr. Morgan is the overshadowing figure," and that the safety of the national interests lies solely in the personnel, the good intentions of these men. At last, it is flaunted in the faces of the American people that these men have the safety of the Republic in their grasp and that we must trust to their goodness for our happiness and prosperity.

SOME OF THE PROBLEMS.

These things foreshadow some of the problems in Federal legislation and we must meet them as men and patriots. Jackson won his fight and the Nation still lives. Wilson will win his and our institutions will survive and bless the generations yet to come. Turn where you will and there is a saturnalia of trust organization and monopolistic conspiracy. As Sir John Culpeper said in the Long Parliament, we may say of the trusts and monopolies now:

They are a nest of wasps—a swarm of vermin which have overcrept the land. Like the frogs of Egypt, they have gotten possession of our dwellings and we have scarce a room free from them; they sup in our cups; they dip in our dish; they sit by our fire. We find them in the dye vat, washbowl, and powdering tub. They share with the butler in his box. They will not bate us a pin. We may not buy our clothes without their brokerage. These are the leeches that have sucked the Commonwealth so hard that it is almost hectical.

These conditions point to the plain duty of Congress in some respects. We can drive out of interstate and foreign commerce every corporation with fictitious and watered stock, those whose capital stock is so great as to make them approximate monopoly, all holding companies and all corporations whose stocks are owned and controlled by holding companies and other corporations. We can place a limitation on the capital stock of these corporations and banks; we can prohibit the holding and voting of the stock of these banks by other corporations; we can prevent interlocking directorates. We can prohibit their consolidating in the roundabout way now in vogue which piles up money in their vaults amounting to many millions of dollars to the detriment of the entire country. We have power under the Constitution to prevent this interlocking of directorates and coalescing of stocks and interests, and should hasten to apply it by congressional action. We know the facts, and a comprehensive law will bring the relief so manifestly just to the people. We can and should destroy protectionism and bring this country to a tariff strictly and only for revenue.

All these things will be consuming and burning political issues during the next few years and will not down till the appropriate legislative remedies have been devised and applied and the Government restored to the hands of the people, where their just rights will be safeguarded under a wise and courageous administration.

By a strange coincidence of history there have come out of the bosom of New Jersey the great trusts, the holding companies, and the gigantic monopolies. From this proud Commonwealth have come the dragon's teeth, and now it seems as if in the very providence and wisdom of God there has come from her borders the giant this year sent forth to exterminate the dragons infesting the land. When history is finally recorded, Jackson and New Jersey's governor will stand forth as the two great figures triumphing in memorable struggles as the champions of popular rights. We must have no class legislation and arraying of class against class. We must have no clamor against legitimate wealth honestly acquired. There must be no unjust attack against corporations and corporate powers within the limits of their granted charter rights. There should be no hysteria in our procedure. And still trusts and monopolies must be disintegrated and utterly eradicated. The conflict is and should be irrepressible.

As a legislator and an American I dedicate my energies to the people in this struggle, and with the Constitution as my guide and the sanctity of the law as my inspiration, I have enlisted in the contest until absolute equality for every citizen is again our watchword from ocean to ocean.

For a Square Deal in the Postal Service.

EXTENSION OF REMARKS
OF
HON. WARREN WORTH BAILEY,
OF PENNSYLVANIA,
IN THE HOUSE OF REPRESENTATIVES,

Tuesday, October 21, 1913.

Mr. BAILEY. Mr. Speaker, I wish in a few words to direct attention to what seems to me a most unwarranted and an extremely flagrant and inexcusable discrimination in our postal service—a discrimination so rank and so utterly indefensible that it is a marvel it has gone so long practically unchallenged.

I refer to the denial of that free delivery and collection of mail to the towns and villages of the country which have long been enjoyed by the cities and which in recent years have been extended to the rural districts. The injustice to the towns and villages is obvious. It puts them at a distinct disadvantage. It subjects them to a handicap which would not be tolerated for an instant were it to come in the form of a different and a higher rate for postage. Yet a different and a higher rate of postage would not be a worse hardship than that imposed by a discrimination in service such as that which actually has been accepted with scarcely a murmur for so many years.

City delivery service is now in operation in 1,709 towns and cities, serving approximately a population of 47,000,000, at a cost of $38,000,000. Experimental delivery is in operation in 114 communities, at a cost of $90,000. Officials of the Post Office Department estimate that there are 6,604 communities, with an average population of 2,000, where there is no carrier delivery service. Estimating that it would require an average of two carriers, at $600 each per annum, to serve each of these communities, should delivery service be established, the cost would be $7,924,800 per annum.

Mr. Speaker, can there be any sound reason why the 12,000,000 residents of towns and villages should be denied what is freely and most properly given the residents of city and rural districts? To me the situation seems anomalous. It is glaringly inequitable. In proportion to number the towns and villages are bearing an equal burden with cities and rural districts in supporting this Government. They are therefore equally entitled to all its benefits and advantages.

Can there be any gentleman on this floor or elsewhere, Mr. Speaker, who would seriously propose that letters mailed in a town or village should bear a 3-cent stamp while those mailed in the city or on a rural route were required to bear only a 2-cent stamp? Such a proposition would be rejected instantly. Yet little protest has thus far been heard against a discrimination which in effect is just as little capable of defense. If the patron of the post office who lives on Broadway or out in the country is entitled to have his mail collected and delivered at his door, is not the patron who lives in a town or village equally entitled to similar service?

Mr. Speaker, he is not getting it. Two or three or more times every day he must drop his work to go to the post office to receive or to deposit his mail. This means loss of time; it means inconvenience; it means just as much to him relatively as it would mean to the banker or the farmer if he were obliged to quit his counting house or his plow for a trip to the post office. The notion that time in a town or village is a negligible quantity is as idle as the notion that we may tax ourselves rich or that to ship more goods out of the country than we bring in is to create a "favorable" balance. Time is money in the town or village as much as in the city or the rural district, and the resident of town or village is entitled in all conscience to every consideration and advantage which we accord to the broker of the city or the farmer out in the remote rural district.

It was with these thoughts in mind, Mr. Speaker, that a few days ago I brought in a bill (H. R. 8947) under the provisions of which free delivery is to be extended to all towns and villages in the United States which are not entitled under existing laws to such delivery. I am extremely glad to say that this proposal met with an instant response from communities which it is designed to relieve. Newspaper comment upon this measure has been wide and mainly favorable. The tone of the country press is especially enthusiastic. Everywhere the proposal has been hailed as a sound one, supported by every consideration of reason and justice. I shall ask leave, Mr. Speaker, to append to my remarks some of these newspaper comments, believing that the Members of this House will be interested in them, as I have been, and that they will lend strength to my appeal for what I deem to be simple justice to many millions of our best and most useful citizens, for everywhere the quality of the citizenship of town and village is recognized. It is largely from the town and village that the best element of the great centers of business are recruited.

The town and the village are the nurseries and the schools where strong, capable, ambitious, and resourceful men and women are fitted for the great things which need to be done. It seems to me a safe assertion that five out of six of the membership of this body were village bred. The foundations of the careers they have made for themselves were laid in these small communities, where the touch of elbow was close, where human sympathy was spontaneous, where life had room to expand, and where the social amenities were unrestrained by dubious convention.

It was my good fortune to grow up in a village myself, and I can therefore speak with some knowledge of village life and of village needs. There may be a sneer here and there from the city dweller, who fancies that the villager has nothing to do, and that going to the post office two or three times a day is a mere diversion, a break in the dreadful monotony. But life in the town or village is just as earnest a proposition as life in the city or in the country. It has its cares, its interests, its compulsions, its necessities, its exacting duties, not less than life elsewhere. Thank God it is not so sordid, not so hopeless, not so steeped in monotony as we see it in some of the crowded centers; it is not so frivolous and idle and meretricious as we see it as it flaunts its fine feathers at the resorts of fashion; but it is sincere, full of zest, alive to its responsibilities, stimulated always by neighborly kindness and by that relative freedom of movement which the overcrowded city makes impossible.

The bill as introduced by me is as follows:

A bill (H. R. 8947) to authorize the Postmaster General to extend the free-delivery mail service to towns and villages of 1,000 population or over.

Be it enacted, etc., That the Postmaster General be, and he is hereby, authorized and directed to extend free-delivery mail service to all towns and villages in the United States having a population of 1,000 or over that are not by existing law entitled to such delivery, and for this purpose the sum of $10,000,000, or so much thereof as may be necessary, is hereby appropriated out of any money in the Treasury not otherwise appropriated, to be available immediately on the passage of this act and to be expended for the purpose named by the Postmaster General under such regulations as he may prescribe.

That all acts or parts of acts inconsistent with the provisions of this act are hereby repealed.

I would hardly be fair to myself did I not admit that I am actuated by a double motive in demanding an equalization of the postal service in behalf of a class now denied almost the best half of that service. It seems to me, Mr. Speaker, that if we open the way for spending the revenues of the Government for useful purposes we shall automatically close the way for spending them for purposes far from useful, say for battle ships and big guns, for fortifications and military expansion. The waste of money in this direction has been wanton. Had it been thrown into the sea less harm would have been done; there would have been the loss only of the money itself or of the labor it represented. But when it is devoted to the building of dreadnoughts and to the maintenance of a great standing army in a time of profound peace, we add to the unnecessary burdens thus imposed the waste of human effort involved in the drawing of thousands of young men from gainful pursuits into a service which brings no gain either moral or material and makes them pensioners upon the labor and industry of the workers.

I do not care to dwell particularly upon this phase of the matter, but it is one which deserves consideration. We have been running mad over militarism in its various aspects, and even a Democratic Congress is proposing to spend or will be asked to spend more than $300,000,000 on the Army and Navy during the fiscal year to come. Against this I protest. In our platform we are pledged "to that simplicity and economy which befit a democratic government." Our solemn word is plighted to the American people that we will lighten the burden of taxa-

tion and sharply depart from the program of extravagance to which the Republican Party had been committed for years. Shall we disregard the duty which our stewardship imposes? Shall we ontdo even the Republican Party in lavish expenditure? Or shall we lop off the useless and the profligate and turn our attention to matters which will yield a return on the investment?

Mr. Speaker, I am willing to spend money freely where it can be spent with a reasonable assurance of bringing a return. There is therefore no hesitation on my part in proposing to spend a few millions for a needed improvement in the postal service. This service has always brought substantial betterments. It has always yielded abundantly in public benefits on the investment. No function of the Government comes closer to the people than that of the post office. Its services are of inestimable value. We can scarcely conceive of the condition which would prevail were this service cut off wholly from all as it is now cut off in part from the towns and villages of the land. Our business and social life is so intimately knit up with this service that to destroy it would be almost to destroy that life itself. And I want this intimate relation to be more intimate still.

I want it extended to include the now neglected element. I want it to reach out to the communities now relatively isolated. I want it to mean as much to town and village as it to-day means to city and rural district. And so I appeal here on this floor and to the people of the country for what I conceive to be bare justice in the interest of good business. I appeal for this in behalf of 12,000,000 American citizens whose rights are equal with the rights of all the rest, yet who are getting less than an equal treatment. They seem hitherto to have been voiceless. No one has stood here to speak for them. But in my humble way let me plead their cause. They are the victims of a sheer injustice. A disproportionate burden rests upon them. Advantages as much their right as they are the right of the other millions who enjoy them are withheld from them in the name of economy. But there is no economy in injustice. It always imposes penalties. And the penalty of this injustice is being paid every day by the people of the United States in a postal service that falls short of that highest efficiency which would be attained by carrying the mails to all as the mails are now carried to some.

PRESS COMMENT.

A SQUARE DEAL.

[From the Johnstown (Pa.) Leader.]

Congressman BAILEY'S bill for the extension of free mail delivery to towns of 1,000 population or more has met with very general commendation. It is, of course, approved by the people of such towns, but it is also regarded as only a square deal by the people of the larger towns and cities and of the rural districts where there is free delivery. What Mr. BAILEY proposes is certain to come sooner or later. He may be a little in advance of the times, but he has at least attracted country-wide attention and has caused agitation of the subject.

AN ENTIRELY REASONABLE MEASURE.

[From the Doylestown (Pa.) Democrat.]

Representative WARREN WORTH BAILEY, of the Cambria-Blair-Bedford district of this State, has introduced a bill in the House providing for the extension of the Free Delivery Mail Service to all towns in the United States with a population exceeding 1,000 which are not entitled under existing laws to such delivery. The bill carries an appropriation of $10,000,000, to be immediately available upon the passage of the bill.

This bill seems to have considerable merit, and it ought to receive favorable consideration by Congress. There are now, according to estimate of the Post Office Department, 6,604 communities, with an average population of 2,000, which at present do not have free carrier service, while the larger towns and the rural communities do have it. It seems like an unwarranted discrimination to deprive these 6,604 communities of advantages enjoyed by the rest of the country, especially when the service can be obtained at an estimated cost of $7,924,800. This cost, it is believed, would be eventually compensated by increased revenue derived from the increased mail facilities.

Mr. BAILEY in advocating his bill says that there is no function of the Government more important to the welfare of the people than that of the post office, facilitating, as it does, communication and making for freedom of exchange. He says he presented the bill with due regard for the pledge of economy contained in the platform adopted by the Democrats at Baltimore, and believes that the extension of the free delivery service he advocates will so stimulate the use of the mails that the actual cost of the extension to the Government will be insignificant. We should like to see Mr. BAILEY'S bill cordially supported as an entirely reasonable postal measure.

A SQUARE DEAL FOR ALL.

[From the Freeland (Pa.) Press.]

People who reside in small towns now have an opportunity to be classed with their city brethren in the way of up-to-date postal service.

Representative WARREN WORTH BAILEY, of Johnstown, has introduced a bill providing for the extension of the Free Delivery Mail Service to all towns in the United States with a population exceeding 1,000 which are not entitled under existing law to such delivery. The bill carries with it an appropriation of $10,000,000, to become immediately available on the passage of the act. Mr. BAILEY takes the ground that the present postal service is anomalous, in that, while residents of the cities and of rural districts are given free-delivery service, residents of over 6,000 communities with an average population of 2,000 are compelled to visit the post office to deposit or receive mail. He believes that this is an injustice to residents of towns and villages and he proposes by his bill to cure this.

It behooves the people who reside in the towns classified under Congressman BAILEY'S bill to get busy at once. You can assist this cause wonderfully by simply asking the Congressman from your district to support Mr. BAILEY'S measure. Get your board of trade or business men's league to forward petitions praying for its passage. The bill seems to be carefully drawn, and if it becomes a law will repeal our antiquated statutes and provide in their stead a modern code suitable to present conditions and future developments in postal matters. It must be remembered that certain large centers of trade are clamoring for penny postage, while others want free delivery established in all small towns first. Where do you stand—for free delivery, certainly—then get busy.

Congressman CASEY will be in Freeland to-morrow, as one of the Mitchell day speakers—ask him to support the bill. He always stands for a "square deal," and that is what this Bailey bill is—a square deal for all.

Freeland is at present operating under the experimental village delivery service. It is one of 144 communities thus favored and is exactly what Mr. BAILEY, through his bill, proposes to make general and establish permanently throughout the entire United States. There was no provision made for equipping the experimental village delivery service which we have in Freeland. This is why we have no street letter boxes. Congressman BAILEY'S bill provides $10,000,000 for equipping the service, hence you can perform a dual duty to-morrow. See CASEY.

AFTER A GOOD THING.

[From the Gallitzin (Pa.) Item.]

Representative W. W. BAILEY has surely started a move for a good thing when he presented the bill for free delivery for towns of 1,000 population, and he should be commended for it and given the assistance of the citizens of such towns.

Each town would have to have the street names posted and the houses numbered, but this expense would not amount to much.

If the expenses of the department must be cut down to make the free delivery possible, let them cut out the printing of envelopes free and the carrying of them through the mails free. Let them cut out the carrying free of so much printed matter that is distributed by Senators and Congressmen which usually goes to the wastebasket unread.

At any rate, Mr. BAILEY is after a good thing and we hope he will land it.

SHOULD GET GENERAL SUPPORT.

[From the Pen Argyl (Pa.) Index.]

Representative WARREN WORTH BAILEY, of Johnstown, Pa., last week introduced a bill in the House at Washington, providing for the extension of the delivery mail service to all towns in the United States with a population exceeding 1,000, which are not entitled under existing laws to such delivery. The bill carries with it an appropriation of $10,000,000, to become immediately available on the passage of the act.

Mr. BAILEY rightly takes the ground that the present postal service is anomalous, in that while residents of the cities and of the rural districts are given free delivery service residents of something over 6,000 communities with an average population of 2,000 are compelled to visit the post offices to deposit or to receive mail. He believes that this is an injustice to the residents of towns and villages, and he proposes by his bill to cure this.

Under the present laws a town must have a population of 5,000 or postal receipts of $10,000 to have free delivery service. Pen Argyl has neither and hence does not enjoy this service, while Nazareth, with about the same population, but having the required postal receipts, has free delivery service. Residents of Plainfield and Washington Townships, just outside the borough limits, have the mail brought to their doors daily, while residents within the borough limits, hardly a stone's throw distant, do not have this facility, but must walk a mile to the post office for their mail.

Representative BAILEY'S bill should receive the support of the citizens of every town and village in the country thus discriminated against under existing laws, and all Senators and Representatives should be importuned by their constituents from such districts to favor the measure.

Dedication of a Site for a Monument to Balboa.

EXTENSION OF REMARKS
OF
HON. THETUS W. SIMS,
OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, November 5, 1913.

Mr. SIMS. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include an address by Hon. ROBERT L. HENRY, of Texas, at the opening of the San Diego Exposition, which was delivered on September 26, 1913.

Representative HENRY spoke as follows:

BALBOA.

"He was tall, handsomely formed, of a very stout and vigorous appearance, with red hair and a countenance which interested and attracted people toward him."

In this verbal photograph an accomplished historian has preserved to the world the image of Vasco Nunez de Balboa.

It is not my purpose to undertake to-day the contribution of historic information, but rather to join in celebrating the achievement of one whose name is fixed in the permanent annals of the world's progress.

It is not inappropriate to here review briefly the life of one whose deeds of valor and world-renowned discoveries are familiar to mankind. On this eventful day, commemorating the four hundredth anniversary of Balboa's great discovery, it should thrill the hearts of all to draw near the personality of this great wizard of adventure and achievement while we look face to face upon the make-up and career of this marvelous man. Exactly 400 years have passed, and yet his life and deeds fire the heart with a fervor no less thrilling than that pulsating the bosoms of those standing by his side when, with majestic gaze, he first beheld the Pacific Ocean and gave mankind the proudest and richest domain the sun in his "all-seeing circuit" ever shone upon.

He was born in 1475 in the Spanish Province of Estremadura. His family was poor, but he descended from noble ancestry and was a gentleman. In 1500, in search of gold and glory, he embarked with Bastides for the New World. After touching the west side of the Gulf of Venezuela they proceeded to Nombre de Dios, situated on the Isthmus of Darien about 24 miles east of where old Porto Bello was situated. Shortly after, with much treasure and a fragment of Bastides's men, he reached Hispaniola, now Haiti. He did not return to Spain with Bastides, but undertook to manage a farm near the town of Salvatierra on the seacoast. He did not succeed in farming and became involved in debt. The sea and adventure again beckoned to his ambition, and he embarked as a soldier of fortune.

He placed himself in a cask of "victuals" carried from the farm on board a ship sailing for South America. When out at sea Balboa appeared from his hiding place and persuaded the surprised and angry captain to allow him to proceed on the voyage. He guided Enciso to a pleasant place on the Gulf of Uraba, where Balboa had visited on this first voyage with Bastides, and there his real career began.

He informed Enciso that this country, called Darien, was full of fruits and that gold abounded in the region. Here at the age of 35 he was appointed alcalde, and here it was he planned for his adventures, discoveries, and immortal glories.

Time forbids following in detail the career of this wonderful explorer and renowned discoverer, but it is not amiss to review somewhat briefly the notable features of his historic achievements, perhaps the most far-reaching in the world's richest progress and development.

Having settled his company at Darien, he immediately began to conquer the surrounding country. In one excursion he first, from Chief Comogre, heard of the great western ocean across the mountains and the gold in Peru. After returning from a voyage he learned that Enciso had endeavored to prejudice his King against him, and in anxiety he determined to attempt some great enterprise the success of which would conciliate his sovereign.

On September 1, 1513, with 190 Spaniards and 1,000 natives, he set out in quest of the western sea. On September 26, from the top of a mountain range, he sighted the Pacific Ocean. He sent Pizarro and others in several parties to reconnoiter. Alonzo Martin, one of his scouts, was the first European to actually touch the new-found sea. On September 29 Balboa himself arrived and in the name of his monarch took possession of the newly discovered "Southern Waters." Here he remained for a while, visited the Pearl Islands, and with much booty triumphantly returned on January 18, 1514.

He at once sent messengers and valuable presents to his King and announced his discovery. And in acknowledgment of his achievement his monarch created him adelantado of the South Sea—admiral of the Pacific—and governor of Panama and Coyba.

Meanwhile Pedrarias Davilla, by order of the King, sailed with an expedition to take charge of the Darien colony, and thus supplant Balboa. Prior to Pedrarias reaching the scenes of discovery, Balboa had frequently crossed the Isthmus and visited the Pacific, and was planning the conquest of Peru and wider explorations of the new ocean. He had built, armed, and launched his brigantines. With them he took possession of Pearl Islands, and had not adverse weather conditions intervened would have conquered Peru.

Here his career ended by reason of the treachery of false friends and the jealousy of Pedrarias. False friends! Alas, too numerous! Balboa was enticed to Acla, near Darien, by a cunning message, where he was placed in irons, imprisoned, and by forced sentence on the part of Pedrarias, who compelled the judge, was condemned to death. On the public square of Acla, in 1517, his head went to the block. Thus ended the career of a great general and remarkable statesman.

His far-seeing and brilliant vision have reached consummation in the progress and development now being enacted on the greatest theater the world ever saw. Looking back upon his eventful career, history clearly reveals that upon the expulsion of Enciso, Balboa was inspired to great endeavor by reason of the responsibility falling upon him. He fully justified his lofty ambition by noble service, he raised his mind to the high dignity of his office and elevated himself in public opinion almost to the height attained by Columbus.

In the permanent annals of achievement his name is perpetuated as one of the most high minded and generous of all the Spanish-American conquistadores. His command over men was the marvel of his day. And with his inspiration and guidance nothing seemed impossible to the Spaulards of his time. Columbus sought in vain for the passage to the other ocean beyond the continent; but it remained for the man this day honored by us to reveal the Pacific after the great navigator had gone on the final voyage of all mankind.

It fires the heart with consuming fervor to even now contemplate Balboa on the mountain heights that September morn. He had thought to start in the gray dawn of that eventful day, but his exhausted soldiers moved slowly and it was close to noon when, emerging from the forests, they beheld the great peak before them. Leaving his men grouped together at the dividing line between the rank growth and the scanty vegetation higher up, he went forward alone. Advancing over rocks washed by the centuries of storm, he finally reached the summit. Before his view the long-hoped-for scene spread out before him—"a wilderness of forest gemmed with sparkling streams and bounded by the watery horizon, the ocean along the sky line, vast, boundless, glittering like a diamond beneath the sun."

With thrilling heart he knelt and thanked God for the glorious privilege vouchsafed him as the first European to behold the southern sea. He shouted to his men to come and gaze upon the ocean so long desired and sought. Addressing his men, he concluded in language significant far beyond its import that day:

> We are the first to gaze upon it and shall be the first to reach its shores. To us belong their treasures and ours alone shall be the glory of reducing these numerous dominions to subjection in the name of our King and of causing to be shed upon them the light of the only true religion. Follow me, then, faithful as hitherto, and I promise you the world shall not behold your equals in wealth and glory."

Yes; in "wealth and glory." Prophetic words! Behold that "wealth and glory" reaching in vast expanse from Peru across Panama to Oregon's farther limits, from California through Texas, from the Mexic sea to the limits of Canada along the majestic sweep of the Mississippi's course—all spread out before us this day, upon which the world's great drama of progress and civilization is being played!

And there they erected from a great tree a cross where Balboa first saw the sea. And the company knelt reverently before the holy symbol as their chaplain offered thanks for the privilege accorded them. They signed a testimonial evidencing that they took possession of the sea and shores in the name of Spain. Their notary duly attested it, and then Balboa with his companions descended to the south.

In due time he and his men reached the shores of the Pacific and took possession of the waters in the name of their sovereign. Every student of history knows the story of the solemn ceremony that day performed in a secluded spot on the tortuous Bay of San Miguel, deeply indenting the southern coast of Darien:

In a short 10 years thereafter, had the spirit of Balboa been permitted to revisit the summit of that lofty mountain, which now in proud majesty towers over the bosom of Panamanian waters, unfolding before his vision there would have appeared an empire extending thousands of miles from Darien along the Pacific to Oregon's northernmost limits, to the eastward until it reached the Father of Waters, and along his course to the northward until it almost touched the limit over which now loom the lofty mountains of Canada's domain—a vast, kingly empire under one flag.

Historians have written that those early Spaniards came here for "gold and glory," but when we search their motives and contemplate their work, they sought more than sordid things. They came to dedicate and consecrate this vast empire to the God of Nations and the Redeemer of Men! And in generations to come, whatever may have been or is to be, it must be written in the annals of history that the Spanish people are joint heirs to our common glory and whatever destiny awaits our Republic.

Coming from Texas, I may be pardoned for the pride my native State feels in her history so intimately linked with that of California. When that captivating and dazzling conqueror, Cortez, had finally planted the standard of European civilization in the halls of Montezuma and added Mexico to the Kingdom of Spain, the same brown-robed priests came from Zacatecas

to Texas and laid, broad and deep, the foundation of another civilization soon to follow. They erected the missions near Nacogdoches in eastern Texas and founded Concepcion and the Alamo. They built the great highway and left their impress to guide those who soon thereafter followed their footprints. These men deserve to be called the "uncrowned heroes" of those early days.

And now, as Californians and Texans, let us turn our vision to the Panama Canal and contemplate its significance to these two great States, one so intimately nestling against the Gulf of Mexico and the other against the Pacific Ocean. The mind of man can not conceive the importance of its opening to Texas and California, to the South and West. It will give tremendous impetus to the manufactures of cotton and iron and lumber. It will hurry us to an era of shipbuilding in America and vastly stimulate our naval pride and power. The great regions of the Southern States and the Mississippi Valley, with rich soil and virile people, with navigable waters and untold resources, will break the monopoly of railroad transportation and cover the earth and sea with their commerce.

The industries of the South will multiply beyond our most optimistic contemplation. The products of our cotton mills and iron furnaces, our timber, steel, and coal, will rush through the canal and supply South America, Japan, and China and reach every clime under the sun. California will be released from railroad monopoly, and by this new water route take her position in intimate relation with all European countries. Your orchards, your vineyards, your forests, and your manifold products will be instantly put in touch with all the world. Texas and California, the South and West, arm in arm will march across the continent from ocean to ocean, back and forth, and will proudly strut across the seas everywhere to capture trade and commerce heretofore beyond our reach, but now and forever our legitimate captives. This canal, for 400 years an idle dream, but a dream now come true, bids fair to entirely change the commercial map of the world and shift the seat of commerce, business, and empire from the North Atlantic to the southern and western ports. Standing here amid these glories and realities, how our hearts should beat and leap with joy as God to-day smiles on this consummation.

Senator Seward said:

Who does not see that every year hereafter European commerce, European politics, European thought, and European activity, although actually becoming more intimate, will nevertheless ultimately sink in importance, while the Pacific Ocean, its shores, its islands, and the vast regions beyond will become the chief theater of events in the world's great hereafter.

In sublime thought and prophetic vision he uttered these words on the floor of the United States Senate in 1852. And to-day the staging is set, the actors are here, and the nations gaze in wonder while that prophetic drama of the "world's great hereafter" is being enacted amid the glories and triumphs of old Pacific's busy regions.

And thus, with the grandest destiny and the freest Government yet born, we shall endure under our Constitution and our flag "as long as the stars twinkle through the loops of time."

Currency.

EXTENSION OF REMARKS
OF
HON. PHILIP P. CAMPBELL,
OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, November 5, 1913.

Mr. CAMPBELL. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include a speech on currency by George Campbell, of Coffeyville, Kans.

The speech is as follows:

WHY RUSH THE SO-CALLED ADMINISTRATION CURRENCY BILL?

President Wilson seems desirous of rushing the currency bill through Congress, that the people may not have an opportunity to consider its provisions before it becomes a law, and it looks as though there was needed at this time a Jackson in the place of Wilson as Chief Executive of the Nation to protect and preserve the rights of the people.

Jackson in vetoing the rechartering of the United States Bank said that the press had been purchased and that the opposition to the bank measure could not find expression through the great metropolitan papers of that day; and what was true then with reference to the press is true to-day, and I speak from experience when I say the great dailies in our large cities will not publish any articles in opposition to the so-called administration currency bill; and hence the people only hear discussed one side of this measure, and that is from the side of the banker; and the great banking interests not only framed this so-called administration bill, but have been educating the people in the interests of the measure, and no doubt the President, before his election, agreed to do just what he is doing in forcing this measure, and perhaps this accounts for his alleged secret mission to New York City prior to his election; as the enacting of this bill into a law means much to the banking interests and will create the greatest and most dangerous monopoly that the world has ever known.

The so-called "administration currency bill" is, in fact, the Aldrich bill, which was framed by the bankers and is being pushed by them through the press and by the organization of citizens' leagues, lectures, and so forth; and the Republican Congress refused to enact this bill into a law, and even Senator Aldrich, it is said, refused to father this bill, and it was left without a parent until President Wilson adopted and acknowledged it as his offspring and christened it the "administration currency bill"; and this bill, by reason of amendments, is worse than the original Aldrich bill, for the Aldrich bill divided the territory of the United States into not less than 15 reserve districts, while the administration currency bill "sees them better" and divides the United States into not less than 12 Federal reserve districts, and each of these districts has a Federal reserve bank to eventually issue the currency for the banks in the district; and the banking corporations of the Federal reserve district are the stockholders of the Federal reserve bank, and the individual person can not purchase stock in the Federal reserve bank. He is barred from doing so, and the proposed banking system is much worse than our present banking system, for the individual can buy and hold stock in our present banks—National, State, or trust company—and can have something to say with reference to these financial institutions and how they are to be managed.

The banks under the proposed banking law will be intensely exclusive and will be above and beyond the reach of the people; and these Federal reserve districts are under the control of the Federal reserve board, which board consists of the Secretary of Agriculture, Secretary of the Treasury, and Comptroller of the Currency, and four other persons appointed by the President and confirmed by the Senate; and as the President appoints the Secretary of Agriculture, the Secretary of the Treasury, and the Comptroller of the Currency, all of the members of the Federal reserve board are appointees of the President, and this will put the banking interests actively in politics, as they will want a President elected who will appoint men on the Federal reserve board that are in the interests of the banking trusts; and if this bill becomes a law the probability is that the Government will not issue the $500,000,000 in Treasury notes, or any less sum, that the bill provides for, which is left to the discretion of the Federal reserve board; but the issue of paper currency will be left exclusively to the Federal reserve banks in the several reserve districts, and this giant banking trust, under a single head, as provided by the bill, will not only control the business of the country but the political destinies of the people, and everything in the line of business or politics will be centered in New York City. This is the object of the bill.

Under the present banking system our industries have expanded more than those of any other nation; and why rush the administration currency bill? There is no lack of money; there is nearly 40 per cent more idle money in the banks of the country than has ever been known in the history of the Nation; and while certain New York City banks have made a desperate effort to prevent banks from making loans to the people and thereby create a money stringency, they have not succeeded, as the great banking interests of New York City are unable to control our private banks and trust companies scattered throughout the land and under separate management; and hence the Banking Trust of New York City wants the so-called administration currency bill enacted into a law, which will give it full control of the money of the country.

The money interests of the East have for several years been alarmed at the rapid increase in the money volume, which has gradually grown since the time McKinley took office at the rate of nearly half a million a day; and provisions have been made so that men who mine the gold can take their product to the Government and do not have to wait to have it coined into money, but the Government will issue to the owner of the bullion gold certificates at the rate of $1 for every 25.8 grains of standard gold, and this measure has resulted in the gradual increase of the currency, and the money thus comes into circulation without being borrowed; but under the pending bank measure one of the central ideas is to get rid of all the money that is not borrowed from the banks and compel the people to borrow all the money necessary in transacting the business of the country, and this puts all business within the power of the banks; and if at any time the banks do not want to loan, there is no law to compel them to, or they can loan to one individual and not to his competitor, who has even better security for the loan, or they can loan to one individual or company at a lower rate of interest than to competitors and thereby destroy all competition and create a monopoly in all business, dominate labor, and wreck the Republic, the same as a similar banking system wrecked Rome.

If the Federal reserve banks are permitted to issue the currency, every bank note is an obligation of the bank to pay so much money, and represents that amount of indebtedness of the bank; and this note, representing nothing but debt, is loaned at interest to the people, and the Banking Trust will thus draw interest on what it owes, while all other persons and corporations must pay interest upon their notes representing their indebtedness; and this is a special privilege granted to the Banking Trust created by the bill that is not accorded to any other individual or corporation; and if the banks get full control of the money of the country, as proposed by the administration bill, and they conclude to take over the property of the people, they will then refuse to make loans and draw in their circulation and force the property on the market, and the banks will be the only ones that will have the money with which to purchase the property.

Pliny tells us that in the decline of Rome under a similar banking system as the one proposed by the administration bill the banks refused to make loans to the people, and the taxes became due, and the people had no money to pay them, and that whole provinces were often bid off by a single individual banker for the taxes due; and the Roman farm of 7 acres, which was the pride of the Roman citizens, disappeared, and the lands were aggregated into large estates, and the people became tenants, then serfs, and later were bought and sold with the land. Do we want this to happen to America?

Pliny, in describing the effects upon the people of this atrocious system, says:

The people gave themselves up in despair in their fields, as beasts of burden lie down beneath their load and refuse to rise. The disintegration of society was complete. All public spirit, all generous emotions, all noble aspirations of men shriveled and disappeared as the volume of money shrank and prices fell.

In the present currency bill banks are exempt from all taxation, except on real estate, thus throwing the burden of taxation on others than the banks; and it is to be hoped that the patriotic citizens in the present Congress will see that this bill does not become a law; and if Mr. Wilson has promised the bankers of New York City to force this bill through Congress, he should at least give the people an opportunity to consider its several provisions before it becomes a law, for it is a deep-laid scheme to subvert our institutions of government and not only control but to own the business interests of the country and the people who toil, and the bill is so framed that outside of the few Wall Street bankers it is not understood by the bankers themselves.

The so-called administration currency bill is not a recent measure, but leading bankers of London, Berlin, and New York have been working on this scheme for years. To keep the people ignorant of the measure, it looks as though the press has been subsidized and citizens' leagues have been organized, scattered throughout the country, and advocates have been employed, including press agents, to combat any opposition that might be developed at any point throughout the United States.

Hon. CHAMP CLARK was evidently the choice of the Democratic voters of the United States for President; but when Mr. CLARK made his speech before the Trans-Mississippi Congress, and took exceptions to the Aldrich bank bill (now the administration currency bill), a prominent banker of New York, high in financial circles, said:

This puts CHAMP CLARK out of the race; the banking interests have a thorough organization and unlimited means at their command, and they will adopt such measures as may be necessary at the convention to defeat CLARK and nominate Wilson.

And subsequent events show this man was not talking through his hat.

The Republican Congress refused to enact the so-called Aldrich bill into a law, and the special interests then turned to the Democratic Party, as they always do, to make it a "scapegoat" to force measures upon the people by their caucus rules that would be impossible to force upon the people under Republican rule.

It will be remembered that when the revenues of the Government accumulated beyond its needs under Republican rule back in the eighties that Government bonds were largely retired until there was only enough bonds for an issue of $174,000,000 in national-bank currency; and the banks took up the cry for an additional bond issue by the Government, that the bonds might be used as a basis for an additional issue of national-bank currency; but the Republicans did not see the necessity for more bonds, and such men as John Sherman began to advocate the Government issue of the currency, as advocated by Jefferson, Jackson, and Lincoln, and stating that the profits derived from the issue of currency, by reason of bills being lost or destroyed should go to the Government—that is, to the whole people—instead of to the banks; and hence the great banking interests in New York caused the nomination and election of Grover Cleveland, and he carried out the wishes of Wall Street and forced the issue of United States bonds until they reached many millions of dollars, and this was accomplished by the most shameful methods.

The Government of the United States would deposit the paper money in the banks, and the banks would take this currency to the United States Treasurer and have it redeemed in gold, and by this means the gold in the Treasury was soon exhausted, and bonds were issued to replenish the gold reserve, and then the paper currency was presented and the gold again drawn out and more bonds issued, and this created what was termed at the time "the endless chain" to draw the gold out of the Treasury, and this method continued until our Government debt was greatly increased without cause, except that Wall Street wanted more bonds as a basis for the issue of more national-bank currency; and this endless chain continued until a clamor arose on the part of the people, and Mr. Cleveland stopped the endless chain by employing J. Pierpont Morgan to protect the gold reserve in the United States Treasury; and thus was presented to the world the humiliating spectacle of a great nation, with its billions of gold and other property, having to employ Mr. Morgan, an individual, to protect the gold in the Treasury; and all this was done in the name of Democracy. And Mr. Morgan, it is said, made many millions of dollars, and was enabled before his death to control one-ninth of the entire property of the United States. And now the special interests, acting through Wall Street, have by far a greater scheme to perpetrate on the American people in what is known as the "administration currency bill," and they have chosen Democracy to do their bidding; and the steam-roller process is in full operation, and even Bryan falls in line and supports this anti-Democratic measure, and his simple democracy that he displayed several years ago has undergone a change, so it requires more than $12,000 per year to sustain it, and yet he and Mr. Wilson claim to be followers of Jefferson and Jackson.

If Jackson could look at his so-called followers, he would probably be disposed to use his favorite quotation in addressing them, and we do not have to stretch the imagination greatly to see him point his bony finger at those who claim to be Democrats and say, "Depart from me, ye workers of iniquity, into everlasting torment, prepared for the devil and his angels."

If the administration is bound to change the present banking system, why not give the people a Democratic measure, as advocated by Jefferson and Jackson? Let the Government furnish all the paper currency in the form of United States notes, and loan these notes to the national, State, and private banks on proper security at 1 or 2 per cent per annum interest. Each bank will then deal direct with the Government and there can be no combination or trust created and the money will always be available for business and there can be no money panic, and the Government will derive a large income from the issue of these notes, and all the people will be benefited.

The so-called administration currency bill not only contemplates a change in our financial system, but is a blow to our republican institutions of government; and without stopping to point out in detail how our Government can be changed if the present bill becomes a law, and why a change is contemplated by those who framed the bill, it will be remembered that Mr. Lincoln said in 1858 that the States of the Union could not exist half slave and half free; that here was presented two antagonistic ideas in government brought in close contact in the government of the States, and that one idea had to overcome the other, and in the near future the governments of the States must of necessity be all slave or all free.

What was true of the governments of the States at that time is now true of the governments of the world. Steam and electricity have annihilated distance and time, and the monarchies and republics of the world are now in closer contact than were the States of the Union in 1858, and this close contact of the nations must bring about a homogeneous government for the entire world, and in the near future the governments of the world will be all republics or all monarchies.

All the nations of the earth are now preparing for this final contest, and the American Republic is the only great power that

the monarchies of the world have to reckon with in their conflict for the supremacy of the world.

They can not conquer America by force of arms; it is invincible to any force that can be brought against it, and if the American Republic is destroyed its destruction must be wrought by its own people, by a banking system similar to the one proposed, that will aggregate the wealth of the country in few hands, the same as was the case with Rome, where 3 per cent of her people owned 97 per cent of her wealth.

The Rubicon is now before the American people in the so-called administration currency bill, and it seems that Mr. Wilson has seen the "heavenly vision" and has heard the voice from Wall Street bidding him to cross. But let him pause for a moment until the people can express themselves. They will tell him that a crown of thorns and a cross of gold is just as objectionable when applied by so-called Democrats as when attempted to be applied by Republicans. They will say to him, "You shall not press down upon the brow of labor this crown of thorns; you shall not crucify mankind upon a cross of gold," in the interest of a coterie of bankers of Wall Street, London, and Berlin.

Lake Mohonk Indian Conference.

EXTENSION OF REMARKS
OF
HON. DORSEY W. SHACKLEFORD,
OF MISSOURI,
IN THE HOUSE OF REPRESENTATIVES,

Wednesday, November 5, 1913.

Mr. SHACKLEFORD. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include an address delivered by the Hon. WILLIAM H. MURRAY, of Oklahoma, at the Mohonk conference in October, 1913.

The address is as follows:

ADDRESS OF THE HON. WILLIAM H. MURRAY, OF OKLAHOMA, AT LAKE MOHONK INDIAN CONFERENCE, OCTOBER, 1913.

Mr. Chairman, before proceeding upon the discussion of the subject "Toward 'restricted' and 'unrestricted' Indians of the Five Civilized Tribes, should the law and its administration be the same?" I desire to thank most sincerely Mr. Smiley, Mr. Phillips, and others of this conference, the successors of the late Mr. and Mrs. Albert K. Smiley, who for a quarter of a century had unselfishly devoted their time and means toward the uplift of the aboriginal Americans, for this invitation and opportunity to discuss these minor phases of the Indian problems.

In the beginning let it be understood that the word "restricted" Indian means those who have some restriction upon the alienation of all or any portion of their allotment and homestead. Mark you, such restrictions apply only to the land and run with its title rather than upon the person of the individual, since under the laws, both Federal and State, the Indian in Oklahoma enjoys the privilege of the ballot and the right to be elected to public office, and is every other way classed as a white man under our constitution. The Federal laws provide that all members of the Five Civilized Tribes—Chickasaws, Choctaws, Cherokees, Creeks, and Seminoles—who are of more than three-quarter blood shall have both their homestead and the other half of their allotment—called the surplus—with restriction thereon against the sale or alienation, except where removal may be made by the department upon application therefor; and all of less than three-quarter blood and more than half blood have restrictions upon their homestead only, leaving the other half wholly under the control of the Indian, to sell as to his judgment seems best; and all of less than half blood have no restriction upon the sale or alienation of any portion of their allotment or homestead—all of this without reference to the age of the Indian allottee—and this last class of less than half blood are known as "unrestricted" Indians. The other two classes are known as "restricted" Indians in our common parlance.

Now, the question should the administration of the law and the provisions thereof be the same with reference to both? Of course when age is not taken into consideration the restricted minor can sell his land by a sort of combined authority of the probate courts, subject to approval of the department at Washington, while minors of the unrestricted class have their lands sold through guardians, approved by the probate or county courts, in Oklahoma. I wish to state that as a race there is no prejudice against the members of the Five Civilized Tribes, or practically none, neither in the matter of social affairs nor in the matter of legislation. I can bear witness to this fact, having been president of the constitutional convention of the State and speaker of the first house of representatives which vitalized its provisions, and that although social and legal restrictions were made against the negro, little, if any, was shown in defining the privileges and rights of the Indian. In our constitution you will find this definition of the races:

"Negro race" shall include all persons of African descent; "white," or "white race," shall include all others.

In the administration of the law, however, the grafter, having no regard for persons, fell upon those where they might effectuate their madness for greed, and it will readily be seen that the easiest points of attack are upon the full bloods and the minor children, irrespective of quantum of blood, through probate courts. In the case of the full blood they are unable to make much headway in the matter of acquiring title, but seek by lease contracts to encumber or becloud the title in such a way that in event of removal of restrictions purchasers will be reduced almost to themselves. There is one land copartnership—not a corporation, because the constitution of Oklahoma forbids corporate ownership of land—which copartnership is said to control by lease at least 250,000 acres in the Chickasaw and Choctaw Nations, the lands mostly of restricted Indians. They hope to retain these lands and secure legislation some time in the future that will enable them to buy up this land, and if permitted to do so would not only injure the Indian but would violate the best policy of State, in this, that it would not be sold in small tracts or fall into the hands of home owners, who would live upon and cultivate the land, but into the hands of a few who would rent or lease it out to white tenants to the detriment of wholesome public policy.

But the greatest evil, particularly to the Indian himself, is in the case of the probate of the minors' estates, and although the first legislature enacted a statute seeking to punish probate judges—and some of them have been punished under this statute—here and there a county judge will win success upon some private agreement to do the bidding of the grafter who has so beset the Indians everywhere. Estates of minors are probated and sold without necessity therefor, and then, in counties where honest men hold these positions, it is even done by deception and by false information presented to the court. In 1910 I was touring one county making speeches in company with the county judge. A very intelligent and shrewd intermarried citizen hailed us and came up and shook hands with us. After leaving him, the county judge remarked:

I am going to send that fellow to the penitentiary. He made false representations to my court that one of his children's land should be sold. I made the order, and he has sold the land and squandered the money. I am going to cancel the deed, with a view of bringing him before the criminal court.

I knew this intermarried citizen well. He was very intelligent and had been a member of the tribe for many years. I knew he had a regard for the welfare of his own children; I knew he was faithful to his wife, and yet the patrimony of his own children, through his extravagance and wasteful methods, was becoming squandered in their minority when they could not help themselves. Other illustrations I might give of fraud and connivance on part of the Indian to secure the property of his own child, but I recite this particular instance to show the evil effect, even where no wrong was intended, of permitting the sale of the lands of minors.

In the administration by the department they have overlooked the fact that there was a distinction between the "restricted" and "unrestricted," when, as a matter of truth, their authority over the restricted class, not only in the matter of alienation, but in the improving, leasing, or other encumbering of the lands, both surplus and homestead, should be more completely under the control of the department, with a view of preventing a clouding of the title; whereas upon the unrestricted class, and even some of the partially restricted class, the rule of the department should be relaxed so as to give over to the Indian complete control touching the alienation, leasing, or encumbering of his own property, but I would confine this wholly to the adult Indian, irrespective of his quantum of blood.

If this were done you would take away the effort of the intelligent class to widen restrictions and break down departmental authority upon all classes, and it would concentrate the attention of the department upon those alone which need and require departmental attention, and these it could better serve. It would lessen the tendency of political influence in favor of removing all departmental control, because the argument is invariably made, giving the instance of those who can control as proof that all restrictions should be removed. In my opinion, all persons of less than three-quarter blood should have absolute control over the sale and alienation of their property, provided they are adults. In the Choctaw and Chickasaw Nations, if not in all the other Five Civilized Tribes, I would close the doors against either departmental removal or sale, or

authority of probate courts to sell any minor child's land, limiting them only to the question of leasing out the property, and that with a view of having it improved in the case of full bloods, and collect the rents or adequate compensation for their property in the case of the restricted or unrestricted child. I do not look with such horror upon the adult Indian, even though he be a full blood who would squander his estate and has but a few years in which to live anyway, as I do upon the sale of property of a child, especially since the child itself can not have any control and when it becomes of age looks back over the scene and realizes that it once had valuable property and would, upon becoming of age, yet own that property but for some probate court or some careless, dishonest, or unthinking guardian. It is enough to make of such Indian child an anarchist, while it will surely make paupers of them all. Such a policy does not even admit of the "survival of the fittest," because the child may be ever so intelligent, ever so well prepared for citizenship upon becoming of age, for his condition financially is hopeless after his property has thus been squandered. There is very little need, anyway, for the sale of a minor Indian's land in the Five Civilized Tribes, especially in the Choctaw and Chickasaw Nations, where they have equal advantages for education. Our State, since its admission into the Union in 1907, has erected more schoolhouses than were erected in the first 40 years of either of its neighbor States. It has more than 20 higher institutions of learning, a greater number than any two of the surrounding States.

Ample provision is made by the State to educate all. Besides, in the Choctaw and Chickasaw Nations, where the allottee has no less than 160 acres of the very best land, or 320 acres of the average allotable land, if this land is rightly managed, when improved the rents and profits therefrom will be sufficient to meet all the economic wants of the child. Besides this, quite a sum of money per capita is due them by the Government, and this should be paid out to them and not held, as now held, by the Government in favored banks who use these deposits for their own benefit. It will be quite sufficient to improve their lands. Upon adult Indians the restrictions should be removed upon all classes, upon all property, up to the degree of three-quarter blood, and the money of all classes of less than three-quarter blood should be paid out to them, and paid immediately, and the hand of the Government taken off of them. The baneful effect of partial restriction can not be described. It hampers the Government and leaves the Indian helpless. Tendency should be either to an entire restriction or no restriction. There is no reason why this class of Indians should have their business at all controlled by the department, and, so far as they are concerned, their property should be capitalized, paid to them, and let the department go out of business as far as it relates to them, to the end that it, as I said before, could concentrate its attention on the remaining class of full bloods or those of more than three-quarter blood. Let the doors be closed against the sale of any minor's land unless it dies, and, indeed, all Indians of whatever age, after death, should have their lands sold under proper restriction either by the Government in the case of the restricted Indian or by the State authorities in the case of the unrestricted Indian. I desire to quote here from the Democratic State platform of 1912, and I may say that this is the view of practically everybody in our State with reference to this Indian problem so far as it speaks upon it:

We favor the sale of the coal lands and coal deposits and the disposal of all Indian tribal property, and the immediate distribution of all funds due the Indian, including just compensation for their lands, known as the "leased district," agreeable to treaty pledges. We oppose the reopening of the tribal rolls, which would result in unsettled conditions and, by fraud and perjury, admit persons to a participation in tribal estate not entitled to such division. We favor such legislation by Congress as will settle Indian land titles, alike just to the Indian and to the white purchaser and homeseeker. The Democratic Party stands for an honest policy and for keeping our pledges to the Indian. It believes it equally wrong to permit the robber by law or its administration of either the white man or the Indian. We are opposed to the taking by the Government of the Indian trust funds, amounting to millions of dollars, in paying salaries and expenses of Federal officeholders and departmental appointees, after agreeing by solemn treaty pledges to pay such expenses by the Federal Government. * * * Their imbecility and venal policy have disturbed business and produced conditions to the extent of retarding immigration in the east half of the State. On this question throughout America, with all tribes of these dependent peoples, for all the years of its long administration and power, the charge is justified * * *.—The author of a Century of Crime.

You will observe that emphatic language is used with reference to having closed the Indian rolls and for paying out the money. Upon this point and all points, so far as expressed in this platform pledge, there is little or no difference between the honest men of all political parties of our State and is the express desire of all classes of Indians themselves. This pledge does not carry anything with reference to the further removal of restrictions or the handling of the lands or to the question of minors, as are herein discussed, for the reason that differences of opinion prevail in Oklahoma upon these particular points, but it may safely be said that all good citizens of Oklahoma, irrespective of party or race, are for this platform as far as it gives expression. I reproduce it with a view of informing this conference as to the best thought of our citizens.

I see time fails me, and I can not longer discuss this important subject; but to recapitulate:

First, I would remove all restrictions from all adult Indians of the Five Civilized Tribes of less than three-quarter blood.

Second. I would give the department greater authority over the control of the entire property of those of more than three-quarter blood, particularly in the matter of the lease and improvement of their lands.

Third. I would stop the sale of the real estate of the minors on all their lands in the Choctaw and Chickasaw Nations and upon the homestead in the other three of the Five Civilized Tribes.

Fourth. I would sell all the remaining tribal property—property owned in common—including the lands unallotted, coal and asphalt property, capitalize the funds due them, and pay to each and all of them their shares.

Fifth. I would clear the title to these lands which have been erroneously sold through mistake of law by permitting the purchaser in good faith to pay to the Indian, or to the Government for him, the value of the lands.

The adoption of all these policies by the Government would first stop the demand of the "citizenship grafter" who desires to reopen the rolls, because there would be no property for him to acquire, even if he should be enrolled; and upon this point I call the attention of the conference to the thousands of dollars paid out by these tribes to protect themselves from this most gigantic fraud. When the common property is disposed of and the money is paid out there will be no incentive for a repetition of this fraud, while as it now is there are two sets of attorneys in Washington at this time, with contingent fees from eight to twelve millions of dollars, trying to enroll in the Chickasaw and Choctaw Nations alone 8,000 "freehooters" who have no more right to citizenship than the members of this conference, but who would take from this tribal estate some $48,000,000. This policy would do another thing. It would concentrate the mind of the country, and especially Congress and the department, upon the proper protection of every class needing protection. The closing of the doors upon the sale of the land of minors will stop the frauds in the probate courts and leave the minor, when he becomes of age, the right to sell his property as any other adult under the policy thus laid down.

It will work a wholesome policy in our State by breaking up the great land-grafting syndicates, relieving the land of its clouded title, so that when sold it will bring its real value and ultimately cause its purchase by a home seeker and settler, which will serve a broad public policy in the interest of the State, the general public, and the Indians themselves.

In a word, it will put out of business our two greatest classes of grafters—land and citizenship grafters—those seeking property by getting themselves placed on the Indian rolls.

Universal Peace.

EXTENSION OF REMARKS
OF
HON. FRANK O. SMITH,
OF MARYLAND.
IN THE HOUSE OF REPRESENTATIVES,

Wednesday, November 5, 1913.

On House joint resolution 146.

"Whereas the narrow coast strip of southeastern Alaska keeps one-third of western Canada from the free use of the most direct route to the Pacific; and

"Whereas this unnatural boundary, created in response to conditions which have long ceased to exist, hampers the development of the adjoining lands and gives rise to an irritation which must become more and more acute as population and commerce increase; and

"Whereas the celebration of the one hundred years' peace between Great Britain and America should not be confined to mere ceremonies, but should include a deed proving the sincerity and earnestness of the participants; and

"Whereas nothing could accomplish that object more happily than the removal of a standing source of irritation between the United States and Canada; and

"Whereas that act would be the most eloquent example of the policy of mutual concessions necessary to establish universal peace: Therefore be it

"*Resolved, etc.*, That the President be, and he is hereby, requested to negotiate with the British and Canadian Governments regarding the transfer of southeastern Alaska to Canada by sale or exchange, or both."

Mr. SMITH of Maryland. Mr. Speaker, renewed attention has been drawn to Alaska by House joint resolution 121, introduced by Mr. ALBERT JOHNSON, of Washington, on August 26, for a strategic railway to connect Alaska with the United States. His argument (CONGRESSIONAL RECORD, Sept. 10, p. 7078) mentions the resolution introduced by Mr. STEPHENS of Texas on February 7 and again on May 15 (H. J. Res. 83) to cede southeastern Alaska to Canada in exchange for an equivalent.

The purpose of the Stephens resolution is not only to promote good feeling between the United States and Canada, but also to take a decisive step toward universal peace. The reasoning is very simple. Peace is not possible without an executive power to enforce it. An international executive power to enforce universal peace can not be organized until the leading nations make certain mutual concessions. The purpose of the Stephens resolution is to advocate these mutual concessions by the most persuasive, the most inoffensive method—that of example, by making a model concession to Canada.

Various circumstances render it desirable that this subject be brought before the public at this moment. Accordingly, in the absence of Mr. STEPHENS, I have been asked to introduce the resolution in briefer form and to accompany it with a detailed argument. I gladly comply with the request, because it deals with what I consider the most important problem of the day—the union of the white race as the only means to maintain its supremacy.

I am pleased to note that Mr. JOHNSON'S ultimate object is the same as Mr. STEPHENS'S and mine—the promotion of universal peace—and that we are also in complete accord as to the most practical means, to wit, an international executive power consisting of the four leading white nations, Britain, France, Germany, and the United States. For the sake of clearness I will quote that part of Mr. JOHNSON'S argument dealing with this subject:

> You are aware of the widespread movement for peace. Mr. Nobel has given $1,800,000 to it; Mr. Glen, $1,000,000; Mr. Carnegie, $10,000,000. Thousands of people all over the globe are studying night and day how to solve this problem of universal peace. Here is a way, the surest way, probably the only way; at any rate, the way in which all existing peace has been brought about: By the consolidation of the existing areas of internal peace, a consolidation which in the past was accomplished for the most part by conquest, in a few cases by voluntary union under external pressure. One more consolidation and the area of internal peace will become worldwide. Anyone can see that the four great powder-making nations, the four great gun-making, machine-using, coal-mining, shipbuilding, money-owning, technically trained nations, representing probably nine-tenths of the world's industry, would together constitute such an overwhelming power as to make war henceforth impossible. It would mean the almost immediate arrest of armaments and their gradual reduction to a mere fraction of their present size. Not only would our insurance policy cost us nothing, but it would greatly reduce our present expenditure. This union of the four leading nations we can bring about by simply creating an organization for the purpose.

AMERICA'S OPPORTUNITY.

Gentlemen, we all love our country. We should like to see her exalted above all nations, not, indeed, by the sham glory that comes from success in killing and smashing, but by the real glory described in the Master's words:

> But he that is greatest among you shall be your servant.

Service rendered to humanity is the only true title to glory. It affords us pleasure to know that we own one of the most favored lands on the globe; we love to contemplate its broad expanse of 3,000 miles from ocean to ocean, all speaking one language, governed by the same institutions; we are somehow proud to think that the largest river on the globe is ours from source to mouth; that we are the richest nation in the world; that Fulton, Morse, Bell, Edison, Burbank, Peary, Langley, Wright brothers are ours; that from our shore sprang that fresh wind of liberty which swept the miasma of despotism from France, and thence, with multiplied force, invaded and cleansed the globe. But all these are merely fortunate accidents, the free gifts of nature; our pride in recounting them is the rich man's pride in surveying his heirlooms. Can we discover in the 137 years of our history even one grand, noble national deed which we performed not from necessity nor for selfish gain, but from sheer love of right? Let us confess that our conduct, considering all the circumstances, has been neither nobler nor wiser than that of the other civilized nations. We need not be ashamed of this. Opportunities to perform noble deeds can not be made to order; we must wait till fortune offers them, which in her best humor she does only once or twice in a century. But if fortune did offer us an opportunity to render a transcending service to humanity of our own free choice, and thus to confer the truest glory on our country, we should be a sorry, sleepy set of patriots if our only answer were a vacant stare. Take time by the forelock, for he is bald behind.

Such an opportunity presents itself at this moment. The great boon for which the world longs to-day is permanent universal peace. This boon, I feel convinced, we are in a position to bestow on humanity, and thus to prove that we deserve the favors which nature has lavished on us above all other nations. If we refused to do it, Thanksgiving Day would become a feast of insincerity, self-condemned to the reproach, "This people honoreth Me with their lips, but their hearts are far from Me." I feel sure that this will not happen. Our people as a whole are sincere, fair-minded, and gentlemanly, and their love of peace is deep and earnest. If they find that there is a practical way of assuring permanent peace and that they have the gift in their own hands to bestow, with no loss to themselves but with decided material gain, and that by so doing they can secure for their Nation the glory of the most brilliant, most beneficent national deed in history, and thus permanently enthrone her in the place of honor among the nations, they will not be so drowsy, so negligent, so unpatriotic as to let the opportunity slip. All that is needed is to bring the plan to their attention and to set it forth as clearly as language will permit. This I will try to do. I will try to describe—

I. The essential agency needed to maintain universal peace, to wit, an international executive power.

II. The potent instrument which fortune has placed in our hands to enable us to bring that international executive power into existence.

I.—AN INTERNATIONAL EXECUTIVE POWER TO ENFORCE PEACE.

HOW PEACE GREW.

The physician who wishes to cure does not simply exhort his patient to get well; he tries to ascertain the causes of the ailment and to discover the means of removing these causes. If we want peace, we must not content ourselves with saying: "Little children, love one another." We must study the causes of war with a view to their removal, the causes of peace with a view to giving them full play.

The first thing that strikes our attention is the fact that peace to-day is well-nigh universal, whereas 2,000 years ago war was well-nigh universal. Evidently somebody or something has already been at work promoting peace and has done it very effectually. "By their fruits ye shall know them." The process which, by its natural action, without any deliberate plan, has made peace nearly universal is surely most apt to make it quite universal, especially with a little aid from those who desire to promote peace. What was that process? It was the consolidation of the areas of internal peace. This was in nearly all cases accomplished by conquest; practically all the peace that ever existed was the fruit of war. The devil was driven out by Beelzebub, prince of devils. The conquerors were the unintentional peacemakers. Their object, of course, was not peace, but the increase of their own wealth and power, which they could only gain by conquest; but in order to conquer their neighbors they had to husband their own resources, which could only be done by enforcing internal peace within their own domain. When as a result of this tighter control of their own force they subdued other tribes, they made their own area of internal peace coalesce with other areas of internal peace into one great area of internal peace, putting an end to the chance of war between the several areas thus united. Peace over a wider area led at once to an advance in civilization and a greater accumulation of material resources, adding to the conqueror's power and enabling him to achieve still great conquests; that is to say, to make additional areas of internal peace coalesce with his own. In this way great empires grew up, each maintaining internal peace over wide territories and long periods, while the centers of these empires—that is to say, the king's residence and the commercial towns—attracted the superior minds and developed an intellectual breed of men, which, in the leisure of peace and with the wealth created by peace, built up the edifice of civilization. The best-known example is the famous Pax Romana. The process was often reversed; empire after empire crumbled into fragments whenever the central unifying force grew too weak to resist the internal strains or the shock of barbarian invasion; but in the long run the centripetal forces prevailed over the centrifugal. As civilization advanced and the means of communication and armament grew more perfect the more powerful States were enabled not only to annex more and more of the smaller ones, but to keep them annexed. Thus the areas of internal peace, by continued consolidation, grew larger and larger and fewer and fewer until the globe to-day is practically occupied by a dozen great political structures, each maintaining complete or nearly complete internal peace.

The thousands of little independent warring States of the day of barbarism have become peaceable provinces—and for the most part willing, comfortable provinces—in the day of civilization. Hardly a dozen of these provinces in Europe at least, would care to resume their former barbarous, penurious, nominal, carlcature independence even if it were offered to them. Having been whipped into union and enriched and civilized by it, and drilled for centuries into the habit of looking on it as their greatest blessing, having been endowed by it with real independence—that is to say, increased power to control their own destiny, increased opportunities for individual development, individual happiness—they now look upon union as part of their nature just as much as mountains and valleys are part of the earth's face, and they take no little credit to themselves for the "lofty patriotism" which inspires this sentiment, in utter oblivion of the thumps and whacks and brutal outrage by which they were cowed into submission to the conqueror's will and made to coalesce into a nation, forced to greet the abhorred "hereditary enemy" as a countryman, to exchange the old patriotism for the new, often to abandon even the old language, the old religion. "Misery acquaints a man with strange bedfellows."

HOW PEACE WILL GROW.

No one can study this process without arriving at the conclusion that eternal peace is within reach and will be ours as soon as we have sense enough, resolution enough, public spirit enough to grasp it. Let there be one more consolidation; let a sufficient number of the existing areas of internal peace be united into a power stronger than all the rest together—and perpetual peace is assured.

In the interest of civilization, of peace itself, the nations forming this union must evidently be not only the strongest but also the most enlightened, humane, peace-loving, in brief, those to whom the destinies of humanity may most safely be intrusted. Everyone knows who these nations are—Britain, France, Germany, and the United States. Evidently the consolidation of these four areas of internal peace would at once make peace world-wide and permanent. They would form a nucleus whose magnetism would almost instantly attract most of the other European States, thus virtually insuring European union. That a countercombination consisting of all the other powers could ever be effected is inconceivable; but even if it were practicable it could not, under present circumstances, make headway against the quadruple league and its adherents.

That this is the surest and quickest way of arriving at universal peace was recognized long ago by the foremost leader and most munificent patron of the peace movement, Mr. Carnegie, in his widely quoted letter to the president of the Thirteenth Universal Peace Congress, held at Boston, October 3–8, 1904. The letter is printed on page 53 of the proceedings of the congress, copies of which may be obtained from the American Peace Society, Colorado Building, Washington, D. C.:

SKIBO CASTLE,
Dornoch, Sutherland, Scotland, September 27, 1904.

DEAR MR. PRESIDENT: I much regret missing the meeting of the International Peace Conference. Since we have at last in The Hague tribunal a permanent high court for the settlement of international disputes more and more my thoughts turn upon the next possible and necessary step forward to an agreement by certain powers to prevent appeals to war by civilized nations.

Suppose, for instance, that Britain, France, Germany, and America, with such minor States as would certainly join them, were to take that position, prepared, if defied, to enforce peaceful settlement, the first offender (if ever there were one) being rigorously dealt with, war would at one fell swoop be banished from the earth. For such a result surely the people of these four countries would be willing to risk much. The risk, however, would be trifling. A strong combination would efface it altogether. I think this one simple plan most likely to commend itself to the intelligent masses. A committee might be formed to consider this. If a body of prominent men of each nation agreed to unite in urging the cooperation of their respective countries in the movement, I think the idea would soon spread.

One can not imagine for our Republic a prouder position than that of pioneer in such a task—her who has been foremost in urging arbitration, first also to urge five important powers to submit their differences to the court of peace. Nor can I imagine more fitting apostles to urge this upon the powers than our present Secretary of State [John Hay], who is to honor you at the coming meeting in Boston, and our present President [Theodore Roosevelt], who recently led the powers to The Hague. Having secured a permanent court for the settlement of international disputes, the time seems ripe for the same agencies to consider the one step further needed to complete the work.

Very truly yours, always for peace,

ANDREW CARNEGIE.

Essentially the same idea was advanced by ex-President Roosevelt in his address before the Nobel peace prize committee at Christiania, Norway, May 5, 1910, as printed in the Advocate of Peace, the organ of the American Peace Society, June, 1910:

> Finally, it would be a master stroke if those great powers honestly bent on peace would form a league of peace, not only to keep the peace among themselves but to prevent, by force if necessary, its being broken by others. The supreme difficulty in connection with developing the peace work of The Hague arises from the lack of any executive power, of any police power, to enforce the decrees of the court. In any community of any size the authority of the courts rests upon actual or potential force, on the existence of a police, or on the knowledge that the able-bodied men of the country are both ready and willing to see that the decrees of judicial and legislative bodies are put into effect. In new and wild communities where there is violence an honest man must protect himself; and until other means of securing his safety are devised it is both foolish and wicked to persuade him to surrender his arms while the men who are dangerous to the community retain theirs. He should not renounce the right to protect himself by his own efforts until the community is so organized that it can effectively relieve the individual of the duty of putting down violence. So it is with nations. Each nation must keep well prepared to defend itself until the establishment of some form of international police power competent and willing to prevent violence as between nations. As things are now, such power to command peace throughout the world could best be secured by some combination between those great nations which sincerely desire peace and have no thought themselves of committing aggressions. The combination might at first be only to secure peace within certain definite limits and certain definite conditions; but the ruler or statesman who should bring about such a combination would have earned his place in history for all time and his title to the gratitude of all mankind.

THE QUADRILATERAL TRUST OF CIVILIZATION.

When business men find that they can not bankrupt their competitors or force them to sell out, and that by cutting one another's financial throats they are all reducing their profits to an uncomfortable minimum, they form a trust and enjoy a comfortable monopoly with a maximum of profit. The era of unlimited competition is everywhere passing into the era of trusts. The great nations are well aware that their present uncompromising competition, so long as it does not lead to the bankruptcy of one or more of them, with resulting absorption, checks the progress of all and condemns them to a life of insecurity and anxiety. What more natural than that the four leading competitors for power, each claiming to be the champion of civilization, should form a trust of civilization, enjoying a monopoly of power and an absolute guaranty of security! Instead of checking they would then have every reason to promote one another's growth. The globe would practically become their joint property, to be parceled out among them into spheres of influence. The four-legged horse of peace would take good care that its pasture shall not be wasted by war.

With less than four legs the horse of peace would be a cripple; a fifth leg would be an encumbrance. Four nations, neither more nor less, are required. To attempt to include in the initial combination more powers than will suffice to make it predominant would be highly imprudent, for the more internal strain you introduce the greater will be the risk of making your league just as inefficient, just as impotent as the so-called European concert, which is simply a deadlock, a mutual paralysis of conflicting interests, an agreement to do nothing. The partners in an efficient concert must be bound together not by mere papers but by common interests; in fact, a brief study of history, an elementary knowledge of human nature, shows that no nation will join such a concert merely to advance the cause of peace, but solely to gain some advantage for itself. We have to base our calculations on the ascertained coefficients of our building material. We have to work with men not as we should like to have them but as evolution has made them. As a necessary result of evolution the controlling element of each nation consists largely of Philistines, characterized by a dominant acquisitive instinct which demands immediate, tangible benefits, first, for the Philistine's own precious self; next, for his town; third, for his nation. Beyond that circle the Philistine's sympathy is a mere twilight; the general welfare of humanity cuts a small figure with him. Hence the more partners you introduce the greater will be the difficulty of reconciling their interests. A triple alliance would be preferable to a quadruple; a dual alliance would be better still; and a single power, as in the palmy days of Rome, would be best of all, if it could be made predominant. That, however, is at present incompatible with statistics. Not one of the four nations can be omitted. Britain will not unite with Germany if this involves the giving up of her present virtual alliance with France. If you try to exclude Germany, the German-Americans will veto any closer approach between the United States and Britain.

In a word, eternal peace is assured if Britain, France, and Germany can be made to unite. The United States would automatically join the league of her parent nations, all the more readily because the strength of the league would thus become so overwhelming that the occasion for using it in military operations would never arise. How, then, can the three great areas of internal peace in western Europe be consolidated? Conquest, the great agency of consolidation, is evidently out of the question in this case. There remains the other alternative—voluntary union. There have been a few cases in which nations have united voluntarily, the most notable being the Swiss Cantons, the Netherlands, and, most conspicuous, the 25 States of Germany. In every one of these cases the driving, whipping force was once more the pressure of conquest—not accomplished, but imminent. There is probably not a single instance on record where nations united voluntarily except as a last resort to avoid subjugation. So rational is the rational animal, so moral the moral animal. "Give us this day our daily quarrel" is the habitual prayer of a good-sized fraction of humanity, and even well-meaning people, having been drilled into the belief that

"independence" is their greatest good, will not consent to enjoy it in greater perfection and security through union with their nearest kin except under compulsion. Cling to the name and never mind the substance. The Germans before 1870 knew perfectly well that they could not have real independence except through union, yet they continued to prefer the nominal to the real independence, and would probably be a chaos of wrangling States to-day had not France rendered them the inestimable service of driving them into union. "Spare the rod and spoil the child," the loathsome maxim of a barbarous pedagogy, is evidently indispensable in the political education of those big children called nations.

The external pressure which may be expected to squeeze Britain, France, Germany, and the United States into union has been well described by my fellow legislator, Mr. ALBERT JOHNSON—the growing power of eastern Asia, which threatens within a few years to drive Britain out of India and Australia, France out of Indo-China, Holland out of the Dutch East Indies, and, thus reenforced, to swallow Siberia and finally overwhelm Russia herself and bring countless Mongol hosts once more to the frontier of Germany, as in 1241. In the face of this common danger the continuance of disunion among the great white nations is really a piece of childish levity. Their motive for union is at least as strong as that which whipped the Germans into union in 1870. And let me predict that when once the habit of disunion is broken, when the four nations have for a few years lived in the fireproof, burglar-proof, impregnable House of Union, secure as Paradise itself, when its modern improvements have become a necessity to them, when they have tasted the power and prosperity that comes from union, when each one of them has through the support of the others gained the long-coveted prizes that were sour grapes to it in its isolation, they will not dream of dissolving the union any more than the Germans dream of returning to their old condition of fragmentation, the anxiety and humiliation of which they can not now recall without a shudder. "Put Germany in the saddle; she will ride all right," said Bismarck to the croakers who before 1870 shook their wise heads in solemn doubt whether Germany could remain united. It took a war to hoist the hesitating, kicking lady into the saddle of union, but no sooner was she seated than she exclaimed, "My, what an improvement on walking! Why did I ever kick? And oh, what chances I missed by not getting into the saddle 50 years ago." It will take a vast machinery of persuasion, consummate engineering skill, and self-oblivious devotion and perseverance to hoist the quadrilateral trust into the saddle of union; but once in, it will never dismount.

OUR DUTY TO TAKE THE INITIATIVE.

The United States has three urgent motives for taking the lead in the movement:

First. We are threatened by the same danger. Years ago the leaders of the Asiatics gave notice in no uncertain tones that they do not intend to submit to being excluded from white men's colonies any longer than they can help. This means that when Asia becomes united—and the larger part of it, China, is already united—we shall have a desperate, hopeless war on our hands unless we open our door wide to Asiatic immigration, which would mean the gradual submergence of the white race in this country. If we are able to see an inch beyond our noses, we can not fail to perceive that our only hope of safety lies in the timely union of the white race. Twenty years from now all our wealth may not suffice to purchase the security which to-day we can get for nothing, to enjoy forever, if we will but grasp it. If we have not sufficient foresight and resolution to bestir ourselves at once, if we continue to consider ephemeral trifles as "more important" than the safety of the white race, we shall simply prove once more that—

Men are but children of a larger growth.

Second. The United States is already looked upon as the leader in the peace movement. The bestowal of eternal peace on humanity would be the greatest glory that our Nation could gain. That pearl of great price is worth almost any effort, almost any sacrifice.

Third. No other nation can take the lead so easily. The jealousy and suspicion prevailing among European nations are so great that any proposal by one nation is at once denounced by the jingoes of the other nations as a deep-laid plot, and is thus almost inevitably foredoomed to failure. Nobody in the world suspects the United States of sinister designs, and thus any move that we make on behalf of union will be taken at its full face value.

If, indeed, we were sure that the pressure of the Asiatic danger would drive Britain, France, and Germany into union in time to assure their own and our safety, we should have no urgent motive for trying to hasten the process. There are, in fact, plenty of enlightened men on the other side of the water who see the danger just as clearly as we do and are earnestly entreating their countrymen to drop their quarrels and combine for the common defense. Foremost among them is the Emperor of Germany, who for 20 years has lost no opportunity to urge European union, having called attention to the yellow peril as far back as 1895 in his famous warning, "Völker Europas, wahret eure höchsten Güter!" (Peoples of Europe, protect your highest interests). "Practical men," "cool heads," will smilingly tell you not to cross that bridge until you get to it; that the white nations will combine of their own accord as soon as the danger becomes serious; and that meantime common sense requires you to concentrate your attention on "more important (?) matters."

Unfortunately, when the time comes to cross the bridge there may be no bridge and no time to build one. To make sure that the white nations shall be ready to act as a unit before fatal injury is inflicted on one of them, they must be cured of their mutual suspicion and jealousy; that is to say, the traditions of centuries must be blotted out of their minds, a task which will require time. A glance at recent developments suffices to prove that the movement toward union is as yet a seedling, the factors of discord in full bloom. Most of the European nations are largely increasing their armies, not for common defense against Asia but against one another, and they do not hesitate to court the aid of the dusky races against their own white kindred. To a large extent the European press ridicules the idea of a yellow peril or treats it as a matter for the remote future. Eighteen hundred years ago Tacitus, the Roman historian, speaking of the Britons, expressed his astonishment at this strange perversity of human nature which leads nations to continue their quarrels, even when the common enemy is at the door:

Nec aliud adversus validissimas gentes pro nobis utilius quam quod in commune non consulunt. Rarus duabus tribusve civitatibus ad propulsandum communi periculum conventus; ita, dum singuli pugnant, universi vincuntur.

(In our contests with the most valiant nations nothing is more useful to us than the fact that they do not act together. Only in rare cases do two or three nations combine to ward off the common danger; and thus, as they fight each by itself, they are conquered one by one.)

What the Roman writer said of the Britons a Chinese writer may, by and by, say of Europeans.

WE MUST ACT AT ONCE.

In a word, we can not afford to leave the unifying movement to itself; if we can do anything to hasten it, a wise regard for our own safety will compel us to make the effort without delay. This is the most important matter; compared to it everything else is unimportant.

What are the obstacles that block the path to the union of Britain, France, and Germany? They are certain burning questions known to everybody. No advance toward union can be made in the near future unless these questions are settled. If I were Mars, the god of war, and were panting to see the bloodiest war that has ever yet been fought, do you know what I would do? I would organize a war society and make it adopt the very program that seems to be in favor with most peace societies—to leave the burning questions to "the healing virtue of time." Keep up that program till Asia, united and fully armed, asserts her long-claimed right to colonize—and no human being was ever born that would not assert the right to better his condition when he had the power—and your paper treaties of arbitration will be blown away in an instant by a world-wide cyclone of war, compared to which all past wars would be games of baseball. To delay the settlement of the burning questions another day is to hazard the timely union, the supremacy, the very existence, of the white race.

The only way to settle these questions is by compromise, by mutual concessions. These mutual concessions have already been widely debated and have been approved by the best thinkers in the three countries. Not one argument has ever been advanced against them that was not splintered at once by a stronger argument in their favor. The only drag that delays these concessions is the same drag that delayed the union of Germany till 1870—the inertia of accomplished facts. "Habit is an iron shirt," says a German proverb. That is a curse when the habit is a bad one; it is a blessing when the habit is a good one. Make Britain, France, and Germany mouit their iron shirt of disunion and the new shirt of union will quickly acquire the iron hardness of a habit.

How can we help the European advocates of union to batter down the inertia and move our three parent nations to adopt the mutual concessions which represent the portal to the paradise of perpetual peace? We can not well send missionaries to Europe to preach the gospel of compromise. If we did so, every

loose tongue in Europe would be delighted with the opportunity of telling us to mind our own business. Happily there is no need of saying a word about it. We have two means of urging these mutual concessions without specifying them.

One of these two means has been described by Representative ALBERT JOHNSON. He advocates a Pan-Aryan association to work for the union of the white race. Such an association, he says, would soon have branches in Europe, whose work would naturally consist in pleading with their fellow citizens in behalf of the well-known mutual concessions. That is a capital idea, and it seems to me that every white man in the South and on the Pacific coast, every member of a trade-union, every advocate of peace, every American patriot ought to join Mr. JOHNSON'S Pan-Aryan association.

But we can do something still better. We can send to Europe an invisible missionary, a ubiquitous, intangible, unsilenceable, uninterruptable preacher, in whose presence the tongue of contradiction will be dumb, the most ranting jingo will bite his lip in speechless rage. An ounce of example is worth a ton of words. We have at this moment a unique, incomparable, God-sent opportunity to inculcate the policy of mutual concessions, the policy of compromise, by the most persuasive, the most inoffensive of all methods—that of example. To our neighbor, Canada, we can make a model concession which would electrify the world, take the heart of Europe by storm, sweep away the inertia of a hundred wrongly accomplished facts, and continue for centuries tearing iron shirts of pernicious habit into shreds.

II. THE INSTRUMENT WHICH WILL CONSTRUCT THE INTERNATIONAL EXECUTIVE POWER.

THE MODEL CONCESSION.

You remember the ill feeling caused in Canada 10 years ago by the controversy over the Alaska boundary. Perhaps you have never fully considered what that question means to Canada.

If you will look at a map showing Alaska in its relation to Canada, you will notice that Alaska consists of two parts, the main body and the panhandle, the latter comprising the islands of the Alexander Archipelago and a strip of coast on the mainland running southeastward as far as the parallel of 54° 40', a mere fringe, 536 miles long, 8 to 35 miles wide, shutting off Yukon territory, the northern half of British Columbia, and the entire Mackenzie Basin from free access to the Pacific. How large, do you think, is the inhabitable Canadian country thus deprived of its natural seaboard? It measures some 600,000 square miles, three times as much as Germany, ten times as much as England and Wales together. It has the same climate as Europe in the same latitude. In Europe, north of the parallel of 54° 40', on an area corresponding to the country behind this panhandle, you find a slice of Ireland, a slice of England, all Scotland, all Denmark, Sweden, and Norway, all Finland, a slice of Germany, and the richest part of Russia; great cities like St. Petersburg, with 1,700,000 inhabitants; Glasgow, with 900,000; Copenhagen, with 500,000. An equal area in Europe in the same latitude contains 25,000,000 inhabitants.

This innocently imprisoned Canadian country has immense resources in timber, agricultural, and mineral lands. The wealth of all countries is mainly concentrated in their ports—Boston, New York, Philadelphia, Baltimore—but it is derived from the commerce of the country behind them. The wealth of this Canadian country will necessarily be concentrated in its ports—on American territory. The entire Pacific slope of this country is drenched with rain and possesses tremendous water power. The factories to be driven by that power will necessarily be on tidewater in American territory, but the reservoirs furnishing the power will be on Canadian ground. The 25,000,000 captive Canadians who will eventually live behind this panhandle will constantly be forced to contribute to the enrichment of half a dozen American cities, while these cities will not contribute a cent toward Canadian taxes. What a constant and growing source of vexation and irritation!

Reverse the situation and see how we should like it. Imagine that our Northeastern States were similarly incarcerated, cut off from the Atlantic by a Canadian panhandle 20 miles wide, 536 miles long, running from eastern Maine down nearly to Philadelphia; that all the great cities on that seaboard—Boston, Providence, Newport, New York, Jersey City—were Canadian cities, deriving their wealth from the American country behind them, yet contributing not a cent toward American taxes; that not a pound of freight could be sent from Pittsburg or Buffalo to New York or Boston for export except in bond. We should long ago have found the situation unendurable.

We should in that case have been greatly vexed if the Canadians had waited in stolid silence till the situation did become unendurable for us, till we were forced to complain. Now, we profess to be a Christian Nation, and as such to be guided by the golden rule, in which, according to the Founder's express declaration, the very essence of Christianity is summed up, and which, for that matter, is also the fundamental law in the gentleman's code: "Whatsoever ye would that men should do to you, do ye even so to them." Shall we wait until the situation becomes unendurable to the Canadians? Shall we force them to complain? If we do, we can no longer claim the golden rule as part of our creed without making it a badge of hypocrisy.

The only gentlemanly course, the only manly course, open to us is to say to the Canadians: "We will let you have this panhandle. What will you give us for it?"

"DO IT NOW."

That model concession ought not to be delayed a moment. If we will have the alertness to make it now of our own free choice, its beneficent effects will be at a maximum. The heart of Canada will be grappled to us as with hooks of steel; a noble, generous national deed, more glorious than all our victories, will be inscribed in our annals, proving at last that we are worthy of the exceptional favors we have received; our example will be most effective in recommending the policy of mutual concessions to our parent nations; next year's centennial peace celebration and the Panama Exposition in 1915 will become the greatest feasts of peace and good will the world has ever seen, most likely marking the beginning of eternal peace, the reunion of the English-speaking peoples; all Canada will come down to get acquainted with the Nation that was courteous to her, not only in word but in deed. If we dawdle till the Canadians complain, the concession will no longer be a model concession; the memory of it will forever be soured by the reflection that we forced them to complain; the effect of our example will be almost nullified; next year's celebration will become a mere ceremony, with the uncouth, gruesome figure of the panhandle sitting at the festive board like Banquo's ghost, jangling all the pretty panegyrics of peace with the dreary, dismal drone: "Diarrhea of words, constipation of deeds." The page in our history which ought to have been resplendent with the scroll of a noble national deed performed of our own accord will become permanently ugly with the blot of a lost opportunity; our great-grandchildren 100 years hence, reading this page of our history, will exclaim in mortified stupefaction: "Were our ancestors hibernating like badgers and woodchucks, with blood thickened to the consistency of axle grease, that they let this opportunity slip?" In future negotiations for the world's peace you can imagine what a powerful lever we should have in our hands if we were able to point to this model concession as proof of our sincerity. If we procrastinate, we must not be surprised if we hear this comment: "You Americans claim to be the leaders in the peace movement; you are forever talking about international good will, yet when it comes to removing the causes of international ill will you are just as regardless of your neighbors' feelings, just as stubborn as any of us in maintaining a geographic absurdity, a geographic atrocity, a thorn in your neighbor's flesh, not because you derive any essential advantage from it, but simply because it is so nominated in the bond. "Why beholdest thou the mote that is in thy brother's eye, but considerest not the beam that is in thine own eye?"

On many office desks is seen a card with this antisoporific: "Do it now." Let Uncle Sam put that card on his desk.

THE VERMIFORM APPENDIX.

So grotesque is the appearance of the panhandle on the map that anyone beholding it must exclaim in astonishment: "How did this absurd boundary ever come into existence?" That is a queer story, which throws a peculiar light on human nature. You are familiar with the character of the vermiform appendix, that pesky little pouch in the human intestine which at present performs no useful function whatever, but, on the contrary, represents a constant danger. At one time it had a useful purpose, being an essential part of the digestive apparatus. That function ceased millions of years ago, but the structure remains through the force of heredity, the inertia of an accomplished fact. If you examine human institutions you will find hundreds of vermiform appendices. In Europe they are largely responsible for the inflammation described under the name of "burning questions." America, too, has a rich variety of interesting vermiform appendices, mostly brought from Europe among the most treasured possessions of emigrants, but some developed in the New World. Among the latter, the Alaska panhandle is perhaps the most classic. At one time there was a reason for its existence. You remember that up to 1867 Alaska belonged to Russia. The traders of the Russian-American Co., coming across the northern Pacific and following the line of easiest communication, had planted their stations along the coast, while

the Hudson Bay Co., coming from the east, had spread its network of posts over the interior. When the two companies came into collision the two Governments found it necessary to define their respective spheres, and this they naturally did in accordance with existing interests. The coast, with the Russian stations, was given to Russia; the interior, with the British stations, was given to Britain. The statesmen of that day evidently thought that they did their duty if they dealt with the situation as it then existed; if the situation changed, it was the duty of their successors to have sense enough to recognize the change and make a new arrangement. We have not yet had sense enough to do that. The vermiform appendix created for the benefit of the Russian-American Co. still remains, though the company has vanished.

Evidently Europeans are not the only ones that wear the iron shirt of habit. Every biped, present company not excepted, wears one or more of these metallic garments, some an inch thick, some half an inch, some thin as tomato cans. Those who have eyes to see, not mere lumps of vitreous humor, need only glance at the Alaska panhandle to become aware that during the last 46 years we have been wearing a well-riveted, double-breasted, corrugated, accordeon-plaited iron shirt.

Every American believes that his country is a republic; that we forswore royalty and all its works 137 years ago. If you have eyes to see, you will find not a few of the traditions of royalty still haunting this land of the free. The superstition that a nation must never alienate any part of its territory except under the compulsion of defeat is nothing else than an ancient iron shirt, a survival from the time when the land was the property of the king. A government of the people, by the people, and for the people, when confronted with the question whether a boundary ought to be changed or be left unchanged, would belie itself, stultify itself, punch its own face if it decided the question on any other ground than that of the hindrance or aid which the boundary offers to the well-being of the nation, especially the convenience or inconvenience of the population directly affected by the boundary. It is evident also that a nation dedicated to the proposition that all men are equal and that governments were instituted solely for the purpose of securing to men their inalienable rights would trample on its own principles if it assumed that it has nothing to do with the comfort or discomfort of a neighbor nation except in so far as it affects its own citizens. A gentleman is always ready to subject himself to considerable inconvenience, to make considerable sacrifices, in order to relieve some one of a nuisance. It would be a pedantic, brutal, barbarous doctrine, another survival from the days of despotism, to say that a nation, especially a republic, can not be a gentleman, even when it can abolish a nuisance without inconvenience to itself, nay, with decided gain. It is the statesman's duty to safeguard the citizens' right to be ladies and gentlemen, not only individually but collectively. This consideration, it seems to me, settles the question. To doubt whether the American people would make the effort to shake off the inertia of a wrongly accomplished fact when it is adequately brought to their notice, to doubt whether they would applaud the proposal to relieve our Canadian neighbors of a fast-growing nuisance, would be to offer a mortal insult to our people, for it would imply a doubt whether the majority of them are ladies and gentlemen.

OPERATE BEFORE THE INFLAMMATION SETS IN.

Hitherto the nuisance of the panhandle boundary has been endurable to the Canadians because the country behind it was almost uninhabited. But that situation will change in less than a year. Mr. JOHNSON'S resolution calls attention to the necessity of railway communication between the United States and Alaska for purposes of defense. He quotes the "Vancouver doctrine," a Canadian supplement to the Monroe doctrine, launched in the Vancouver News-Advertiser of April 12, to the effect that Canada can not tolerate the occupation of Alaska by a foreign power and would be compelled by self-interest, in case of necessity, to permit the transportation of United States troops across her territory. An express agreement with Canada for that purpose, though highly desirable, would not be absolutely necessary, since the mere existence of railway communication with Alaska would suffice; and hence it might have been deemed likely that Canadian statesmen would be content to let the facts speak for themselves.

All the more gratifying was the announcement two months ago that the "Vancouver doctrine" had been publicly proclaimed by no less an authority than Sir Richard McBride, prime minister of British Columbia, who expressed the opinion that Canada would not hesitate to grant us the privilege of military transportation by treaty. That is a tremendously important concession on the part of Canada, amounting virtually to a Canadian-American alliance for the defense of Alaska, and this gentlemanly frankness calls for an equally gentlemanly concession in return.

Under these circumstances it can hardly be doubted that the building of that strategic railway, with half a dozen branches to Alaskan ports, will begin next year, and as it can be carried on from five or six points simultaneously it could, if desired, be finished in two years. To cap the climax, the government of Alberta has announced its intention to proceed with the immediate construction of a railway from Edmonton to Fort McMurray, which will place the Canadian railway system in intimate connection with the 2,100 miles of navigable waters of the Mackenzie River system. Already there is talk of another transcontinental railway north of the Grand Trunk. In a word, the entire country behind the Alaska panhandle will in two years become accessible for settlers. Huge investments will be made, calling for a vast supply of material, which will mean a bustling, rushing traffic. In five years there will be 300,000 people in that country.

Then the panhandle situation will become acute. Whoever has had experience in sending goods over a frontier in bond knows what a nuisance it is when conducted on a large scale. The settlers behind the panhandle would have to be angelically meek if they kept their temper when on reaching their western boundary, almost everywhere in tantalizing sight of the sea, they found that they could not get to tidewater except through a barbed-wire fence of customhouses, strung along a line drawn at random on the map in 1825 at St. Petersburg by two men who know nothing about Alaska and cared less. A period of constant friction and growing ill humor will follow, till the inertia is overcome and we shall have to settle the matter exactly as we ought to settle it now—by sale or exchange, or both. The only difference will be that instead of proving how prompt, how reasonable, how gentlemanly we are, we shall prove how sluggish we are, how regardless of other people's feelings. The deed which might have shone as the brightest jewel on our Nation's brow, had we taken the initiative, will, if done in response to our neighbor's complaint, simply become a label inscribed "Pachyderm."

Any surgeon will tell you that the proper time to operate on the vermiform appendix is not when the inflammation is at its highest, but when it is at its lowest. The proper time to operate on the Alaska appendix is now, when the inflammation of 1903 has fairly subsided and before the new inflammation which is setting in has made much progress.

CHANCE FOR A GOOD BARGAIN.

The proposition that the panhandle be surrendered gratuitously need not be discussed, for humanity has not yet reached that point of enlightenment or generosity. It would be premature to say what the equivalent should be, but one or two suggestions may be appropriate.

If there is any little British colony that we covet and that is of no great use to Britain, it might be included in the bargain and perhaps prove far more useful to us than the Alaska panhandle. British Honduras might be particularly apt to illustrate "the giving that is gaining." By offering it to the Mexicans, together with a sum of money (which might help to answer the question of the looming indemnities), we could probably get in exchange Lower California and enough of the Sonora Desert to give Arizona the much-desired port on the Gulf of California. With the water of Colorado River that desert could be converted into a miniature Egypt, capable of supporting a million inhabitants. It is rumored, in fact, that a company is planning to convert it into a vast cotton field, to be worked by Asiatic labor, for which the laws of Mexico would offer every facility. We might as well make up our minds now whether the water of our river is to enable an Asiatic colony of a million to be planted on our border. With Lower California we should acquire Magdalena Bay, a first-rate naval base, and thus put an end to the periodical scare over its impending occupation by another power.

The privilege of transporting troops over the proposed strategic railway is in itself an item that ought to figure largely in the estimate of equivalence.

It might be well to stipulate that free trade shall continue for, say, 20 years between the panhandle and the United States. In this way Seattle, Portland, and San Francisco would reap undiminished profit, in fact, quadrupled profit, from the enormous expansion of the trade of the panhandle and its hinterland, due to the building of the railways.

The strategic railway and its branches to the panhandle, vastly increasing the value of adjoining property, would mean a fortune to every property holder in the panhandle, whose ports, unhampered by the present barbed-wire fence of customhouses a few miles inland, would in a few years develop into important cities—embryonic Glasgows and Dundees. If the purchase price included a sum of money, it might be stipulated that a part of that sum is to be devoted to improvements in the panhandle, with resulting additional prosperity to soothe the lacerated patriotism of its inhabitants, many of whom are probably not American citizens at all. In point of fact, half a million Americans have voluntarily gone to Canada and surrendered their nationality, apparently without any feeling of laceration. For that matter, the transfer need not involve any surrender of citizenship. The owners of the salmon canneries, it has been suggested, would probably find the laws of British Columbia less irksome than ours.

SUMMARY.

In summarizing the argument it may be well to glance at its fundamental principles.

All the peace that ever existed within any nation is compulsory; it would not last five minutes were it not for the presence of the executive power with its well-filled store of powder and ball. It is inconceivable how universal peace could exist without a similar executive power strong enough to beat down all opposition and compelled by self-interest to maintain peace just as Britain is compelled to do among the native States of India.

THE ÉLITE MUST CONTROL.

Now, peace, after all, is not the ultimate end, but merely a means to the ultimate end, which is the increase of human happiness. This does not mean that the majority must always rule; it requires that the élite, the most advanced types of humanity, should have the best chance to spread or at any rate hold their own. Which are the most advanced types? There is no use in dogmatizing or fanaticism one way or the other, in denying the merits of other races or cloaking the faults of our own. The question of the value of various races is a knotty scientific problem for the complete solution of which the data are as yet insufficient. Let us frankly admit that some races have not as yet had adequate opportunities. Let us grant that the mere plea of self-defense or the tie of blood counts for nothing; that if another race were found by trial to be more highly endowed with the qualities that make for the increase of happiness our own race should cheerfully resign the leadership. But while awaiting the reasoned, passionless verdict of science on these points, nothing could be more preposterous than to assume in advance that the verdict will be unfavorable to us and accordingly to let events take a course which must surely deprive our race of the leadership and place it at the mercy of the dusky majority. The evidence in favor of the superiority of our race is even now fairly overwhelming, and it is highly improbable that new researches will materially alter the balance of argument. Civilization in the future as in the past will mainly depend on its pioneers, and hence it is best for human life as a whole that the pioneer race should have the best chance to spread. We know exactly how we are going to treat the other races so long as we remain in control; we shall continue more and more to—

Fill up the mouth of famine
And bid the sickness cease.

We have not the slightest means of guessing how the other races will treat us if we place ourselves at their mercy.

THE ÉLITE TRAINING ITS ANTAGONISTS.

Universal arbitration can not insure the predominance of the highest types, for arbitration resolves itself in the long run into a counting of heads, and for every white face in the world there are two dusky faces. That was not a serious matter so long as white men reserved to themselves the well-earned power arising from their own inventive genius, so long as they were the only ones possessing magazine rifles and cannon. Of late, however, unscrupulous white men, caring for nothing but sordid gain, have, through the disunion of the white race, been allowed to sell the latest improved weapons to the other races by the million and have taught them to manufacture these weapons; white officers, supposed to represent the very cream of honor and patriotism, have for love of money committed the unspeakable treason of instructing the dusky races in military science. If our race thus continues to lame itself in the struggle for existence by throwing away the advantage conferred by its very highest qualities, the time will soon come when the dusky races, outnumbering us as two to one, and using all their advantages to the utmost, will be the masters, we the servants. Unrestricted competition of cheap labor would little by little crowd the white race out of existence by taking away the means of life from the white laboring class, the fertile soil from which all the flowers of our civilization have sprung. Disarmament, the substitution of universal arbitration in place of armed defense, would simply hasten the coming of the day when we shall have to doff the crown of supremacy and don the cap of subordination and prepare to quit the house which we have swept and garnished. Our very demigods of intellect, whose genius subdued the earth and made every corner of it accessible, would become the authors of our ruin if the science created by them and rightly placed at the disposal of all humanity without stint or discrimination, enabled the other races, by their reckless fecundity and callousness, to oust us from the competition for those means of existence which nature necessarily awards to the lowest bidder.

Ill fared it then with Roderick Dhu
That on the field his targe he threw.

There is only one way to prevent this. Fortunately, the surrender has not yet proceeded far; Roderick Dhu still holds the targe. For the present we white men are as yet incomparably superior in power to all the other races, and we can easily remain so if we will only stop quarreling among ourselves. United we stand; divided we fall. If we do not hang together, we shall hang separately. The most exquisitely silly geese are those boasters who perpetually prate about Aryan superiority, and as perpetually speak of an Aryan sister nation as "the hereditary enemy," thus insisting to the best of their myopic ability that the Aryan house shall remain divided against itself and capitulate to a mass of cheap muscle.

When the fate of the entire white race is at stake our people would have to be mollusks, not red-blooded human beings, if they hesitated to make the trifling nominal sacrifice which will assure their own perpetual supremacy.

A TERRIBLE WARNING.

The history of Greece is the most frightful object lesson to prove that the most brilliant mental superiority in other respects will not compensate for the folly of disunion. More than 2,200 years ago Aristotle wrote:

> The Greek people, being both brave and intelligent, have retained their freedom and enjoy the best administration, and could rule the world if they had the good luck of becoming united under one government.

Luck! That word tells what the philosopher thought of contemporary human nature. Well he knew that his countrymen, with all their superb gifts, would never have sense enough, nobility enough, to grasp the boon of union of their own accord, but would have to wait for luck to thrust it on them. And the luck never came. Little did the philosopher dream that his glorious race, which, according to Galton, had reached a higher average of intellectual development than has ever been attained by any other community and whose achievements in several lines of activity are even now the unsurpassed models, would, through their cursed disunion, become helpless chattels, trampled under foot by every barbarian, so crushed by perpetual outrage that for many centuries they dared not defend themselves against the most atrocious treatment. "Völker Europas, wahret eure höchsten Güter!" Do not wait for luck! "Do it now!"

THE FOUR GUARDIANS OF CIVILIZATION.

Thus, in order to have the best assurance that the international executive power shall always be on the side of justice, civilization, and the increase of happiness, it must be composed not only of the strongest but also of the justest, most humane, most advanced nations. To state this condition is to name the four nations which can best fulfill it—Britain, France, Germany, and the United States. Their appointment as world policemen would not mean disarmament, but it would mean the minimum of armament. So long as there are a dozen big sticks in the world they are bound to grow bigger and bigger; when there is only one big stick it will quickly grow smaller.

Certain unsettled questions prevent the three prospective European partners in this league of peace from annexing one another, to the immense advantage of each. These questions can only be settled by mutual concessions. The best intellects in the three countries have declared themselves in favor of these concessions; the sole obstacle, the inertia of accomplished facts, has begun to crack. All that is needed is the first move—a difficult matter for the three nations in their habitual attitude of mutual defiance. Let the fourth partner, their joint offspring and impartial and unsuspected friend, give a little push, and the inertia of wrongly accomplished facts, already cracking, will crumble; the white race will become united, its supremacy forever assured.

THE LAST STRAW.

How shall we give this little push? Not by exhortation, but by example; not by advising our brother to draw the mote from his eye, but by picking the beam out of our own eye; by setting before the eyes of the civilized nations a model concession, which will inculcate the policy of mutual concessions far more eloquently, far more irresistibly, than a thousand meetings, a thousand banquets, a thousand speeches, a thousand books. It will

at once become our ambassador to Europe, the envoy extraordinary and minister plenipotentiary of the United States of America to the Disunited States of Europe—our ubiquitous, sleepless, thousand-tongued apostle, shouting to our parent nations day and night: "Compromise! Compromise! Compromise! See how cleverly the Americans are doing it! Be reasonable, gentlemanly, to one another, as the Americans are to the Canadians!"

In brief, our country has at this moment such an opportunity as never came to another nation, the opportunity to bestow permanent peace on humanity, and thus to assure to herself the most honored place among the nations for all time to come. This is the most important matter; compared to it everything else is unimportant. Gentlemen, you are patriots; you are the guardians of your country's honor. I feel confident that you will be equal to the opportunity.

Intervention for the Protection of Life and Property in Mexico.

EXTENSION OF REMARKS
OF
HON. WM. H. MURRAY,
OF OKLAHOMA,
IN THE HOUSE OF REPRESENTATIVES,

Friday, November 7, 1913.

Mr. MURRAY of Oklahoma. Mr. Speaker, history discloses the fact that every political party long out of power, seeking to make issues directly concerning the people, is prone to forget our world relations. The Democratic Party, though, prior to the Civil War was the aggressive party of all parties then extant in handling international questions, particularly those which had in mind the future perpetuity of the Republic, such as the announcement of the Monroe doctrine and the protection of life and property on the high seas and in foreign lands; but having been long out of power, seems not to be an exception to this general rule.

PARTY PLATFORM HISTORY.

This rule may be noted from the platform declarations of the various American political parties. I quote from my speech on September 4 last on this floor:

"The doctrine of protecting American citizens' life and property in all the world is not a new doctrine. It is a doctrine that has gone hand in hand with every administration of this Republic, and the men who have adhered most closely to it have enjoyed the greatest personal popularity. Among them were Monroe, Jackson, Lincoln, Grant, and Roosevelt, who steadfastly adhered to the doctrine of protecting American citizens everywhere.

"Reference to the political conventions will show that at no time has a party gone into power that did not have a stronger platform than its opponent. The strongest platform in line with those ideals is that laid down in the Baltimore platform.

"It is interesting to observe the platform declarations made since the organization of the Government touching American foreign policies—the Monroe doctrine and the protection of American citizens abroad as well as at home. I repeat that prior to the Civil War no political party, except the Democratic Party, announced a foreign policy, save and except the platform upon which Henry Clay ran for President in 1832. This declaration was but a meager one, and in these words:

"We consider the life, liberty, property, and citizenship of every inhabitant of every State entitled to national protection.

"And even this is susceptible of a double construction and could be construed as meaning such national protection at home without such protection abroad.

"Prior to the Civil War the Democratic Party, both by administration and treaty, as well as by platform declaration, was bold and vigorous in its adherence to an international policy. In its platform of 1840, with Martin Van Buren as its candidate for President, it announced:

"That every citizen and every section of country has a right to demand and insist upon an equality of rights and privileges, and to compel ample protection of person and property from domestic violence or foreign aggression.

"This same section was specifically reaffirmed in 1844, with the adoption of an additional provision for American expansion. These planks were repeated in 1848, in 1852, and again in 1856. In addition to this declaration in 1856 the Democratic Party announced a more comprehensive international plank by affirming the Monroe doctrine, commerce, and protection of American citizens abroad. In the platform it declares:

"*Resolved*, That the administration of Franklin Pierce has been true to the great interests of the country. * * * It has signally improved our treaty relations, extended the field of commercial enterprise, and vindicated the rights of American citizens abroad.

"Again, in section 2, it says:

"*Resolved*, That our geographical and political position with reference to the other States of this continent, no less than the interest of our commerce and the development of our growing power, requires that we should hold as sacred the principles involved in the Monroe doctrine. Their bearing and import admit of no misconstruction; they should be applied with unbending rigidity.

"And again, section 5:

"*Resolved*, That the Democratic Party will expect of the next administration that every proper effort be made to insure our ascendance in the Gulf of Mexico, and to maintain a permanent protection to the great outlets through and emptied into its waters the products raised out of the soil and the commodities created by the industry of the people of our western valleys and the Union at large.

"In 1860 we find in the platform upon which Breckinridge was nominated a broader policy governing American territory, together with the following declaration:

"The Democratic Party of the United States recognizes it as the imperative duty of this Government to protect the naturalized citizen in all of his rights, whether at home or in foreign lands, to the same extent as its native-born citizens.

"Then came the Republican convention of 1860, which nominated the immortal Abrahum Lincoln, and which was the first party platform in opposition to the Democratic Party that announced, in unmistakable language, its policy to protect American citizens at home and abroad. It used this language:

"The Republican Party is opposed to any change in our naturalization laws * * * and is in favor of giving a safe and efficient protection to the rights of all classes of citizens, whether native or natural born, at home and abroad.

"In the same year the Constitutional Union Party, which nominated for President John Bell, of Tennessee, announced the same doctrine in these words:

"We hereby oblige ourselves to maintain, protect, and defend, separately and unitedly, that great principle of public liberty and national safety, against all enemies, at home and abroad.

"After this the Democratic Party, until the nomination of Tilden and Cleveland, had but meager expressions touching the Monroe doctrine and the policy of protecting American citizens abroad, and the obligations of the Government having fallen upon the Republican Party, they with great energy asserted the same doctrines adhered to for the first 60 years of the Republic under Democratic rule. In the midst of a great civil war, when it taxed its resources to maintain itself, in the face of the Mason and Slidell controversy with Great Britain and the fear that Great Britain would recognize the Southern States as an independent government, with the election of a President in 1864, nominated Abraham Lincoln again for the Presidency, and, following the example of the President in contesting the claims of the holy alliances of Europe, seeking by subterfuge to place Maximilian on the throne of Mexico, the Republican Party fearlessly and boldly, in section 11 of their platform, announced this doctrine:

"*Resolved*, That we approve the position taken by the Government that the people of the United States can never regard with indifference the attempt of any European power to overthrow by force or to supplant by fraud the institutions of any republican government on the Western Continent, and that they will view with extreme jealousy, as menacing to the peace and independence of their own country, the efforts of any such power to obtain new footholds for monarchial governments, sustained by foreign military force, in near proximity to the United States

"Students of history will recall that from the beginning of this Government there had been an issue between us and European Governments, particularly with Great Britain, upon the question of the right to impressment of American seamen; that this was the first cause of the War of 1812; and that although this war terminated satisfactory to the United States, it left this question unsettled—the question of 'expatriation,' the British doctrine that 'Once a citizen, always a citizen'—and it was not settled until Grant was made President of the United States, and its settlement was largely due to the firing on a foreign war vessel by the United States Navy and the prevention of the taking away of an American citizen who had become naturalized from one of the European monarchies.

"In the Republican platform of 1868, which nominated Gen. U. S. Grant for the Presidency, we find this broad principle enunciated:

"The doctrine of Great Britain and other European powers, that because a man is once a subject he is always so, must be resisted at every hazard by the United States as a relic of feudal times not authorized by the laws of nations and at war with our national honor and independence. Naturalized citizens are entitled to protection in all their rights of citizenship as though they were native born; and no citizen of the United States—native or naturalized—must be liable to arrest and imprisonment by any foreign power for acts done or words spoken in this country; and, if so arrested and imprisoned, it is the duty of the Government to interfere in his behalf

"We find in the platform of 1872, when Grant was nominated for the second time for the Presidency, a repetition of this doctrine:

"The doctrine of Great Britain and other European powers concerning allegiance—'Once a subject always a subject'—having at last, through the efforts of the Republican Party, been abandoned, and the American idea of the individual's right to transfer allegiance having been accepted by European nations, it is the duty of our Government to guard with jealous care the rights of adopted citizens against the assumption of unauthorized claims by their former Governments.

"In the settlement of this doctrine of the right of 'expatriation'—the right to change citizenship—finally won by the United States Government, it was due to the vigorous, broad, and comprehensive foreign policy and administration of President Grant. This second Grant platform enunciated the principles of Jefferson in his first inaugural address. In section 4 it reads as follows:

"The National Government should seek to maintain honorable peace with all nations, protecting its citizens everywhere and sympathizing with all people who strive for greater liberty.

"After the administration of Grant the foreign policy enunciated by the Republican Party was weak until the nomination of William McKinley in 1896. In this platform it enunciated the principles of reciprocity, trade with foreign nations, merchant marine, foreign relations with the Western Hemisphere, and sympathy with the victims of the Armenian massacres, and a reassertion of the Monroe doctrine. After this the policy of the administration of the Republican Party departed from the old principles of Jefferson—'Peace and commerce with all nations and entangling alliances with none'; 'Encouragement of republican governments and their protection from the monarchies of the Old World'—and substituted therefor the doctrine of imperialism.

"It may be noted in all the platform-making history of this Republic that there was never an instance of an election of a candidate for President upon any ticket where his foreign policy, as expressed in his platform, was less comprehensive than his opponent upon the Monroe doctrine and the protection of American citizens in foreign lands.

"Returning to the Democratic doctrine since the Civil War, we find in the canvass of 1868, with Horatio Seymour for the Presidency, enunciations of the old principles of the Democratic Party, but with less vigor than his opponent, Gen. Grant. Here is section 8 of that platform:

"Equal rights and protection for naturalized and native-born citizens at home and abroad; the assertion of American nationality which shall command the respect of foreign powers and furnish an example and encouragement to people struggling for national integrity, constitutional liberty, and individual rights, and the maintenance of the rights of naturalized citizens against the absolute doctrine of immutable allegiance, and the claims of foreign powers to punish them for alleged crime committed beyond their jurisdiction.

"The next broad and comprehensive declaration of the old ante bellum Democratic doctrine was found in the platform of 1884, upon which Grover Cleveland was elected to the Presidency:

"We favor an American continental policy based upon more intimate commercial and political relations with the 15 sister Republics of North, Central, and South America, but entangling alliances with none.

* * * * * * *

"The Democratic Party insists that it is the duty of the Government to protect with equal fidelity and vigilance the rights of its citizens, native and naturalized, at home and abroad, and to the end that this protection may be assured, United States papers of naturalization, issued by courts of competent jurisdiction, must be respected by the executive and legislative departments of our own Government and by all foreign powers. It is an imperative duty of this Government to efficiently protect all the rights of person and property of every American citizen in foreign lands, and demand and enforce full reparation for any invasion thereof. An American citizen is only responsible to his own Government for any act done in his own country and under her flag, and can only be tried therefor on her own soil and according to her laws; and no power exists in this Government to expatriate an American citizen to be tried in any foreign land for any such act.

"This country has never had a well defined and executed foreign policy, save under Democratic administration. That policy has ever been in regard to foreign nations, so long as they do not act detrimental to the interests of the country or hurtful to our citizens, to let them alone; that as a result of this policy we recall the acquisition of Louisiana, Florida, California, and of the adjacent Mexican territory, by purchase alone, and contrast these grand acquisitions of Democratic statesmanship with the purchase of Alaska, the sole fruit of a Republican administration of nearly a quarter of a century.

* * * * * * *

"Under a long period of Democratic rule and policy our merchant marine was fast overtaking and on the point of outstripping that of Great Britain. Under 20 years of Republican rule and policy our commerce has been left to British bottoms, and the American flag has almost been swept off the high seas. Instead of the Republican Party's British policy we demand for the people of the United States an American policy.

"Another instance where the broader international policy was successful is found in the defeat of Cleveland by Harrison, wherein they expressed themselves on the protection of our fisheries and the Monroe doctrine. Upon the Monroe doctrine the platform says:

"The conduct of foreign affairs by the present administration has been distinguished by its inefficiency and its cowardice. Having withdrawn from the Senate all pending treaties effected by Republican administrations for the removal of foreign burdens and restrictions upon our commerce and for its extension into better markets, it has neither effected nor proposed any others in their stead.

"Professing adherence to the Monroe doctrine, it has seen with idle complacency the extension of foreign influence in Central America and of foreign trade everywhere among our neighbors. It has refused to charter, sanction, or encourage any American organization for constructing the Nicaraguan canal, a work of vital importance to the maintenance of the Monroe doctrine and of our national influence in Central and South America and necessary for the development of trade with our Pacific territory, with South America, and with the islands and farther coasts of the Pacific Ocean.

"In the race for the Presidency of 1892 the Democratic platform, upon which Cleveland was elected for the second time, announced a foreign policy, as follows:

"The Democratic Party is the only party that has ever given the country a foreign policy, consistent and vigorous, compelling respect abroad and inspiring confidence at home. While avoiding entangling alliances, it has aimed to cultivate friendly relations with other nations, and especially with our neighbors on the American Continent, whose destiny is closely linked with our own, and we view with alarm the tendency to a policy of irritation and bluster, which is liable at any time to confront us with the alternative of humiliation or war. We favor the maintenance of a navy strong enough for all purposes of national defense and to properly maintain the honor and dignity of the country abroad.

"In addition to this comprehensive policy this platform gave expression to the question of 'reciprocity,' 'sympathy for the oppressed in foreign lands,' 'immigration,' 'waterways,' and 'Nicaraguan canal.'

"In the platform of 1896, upon which W. J. Bryan was first nominated for the Presidency, we find the following declaration:

"The Monroe doctrine, as originally declared and as interpreted by succeeding Presidents, is a permanent part of the foreign policy of the United States and must at all times be maintained.

"We extend our sympathy to the people of Cuba in their heroic struggle for liberty and independence.

"Again, in the platform of 1900 the Democratic Party dealt with the question of 'Cuba,' 'the Philippines,' 'the Monroe doctrine,' 'militarism,' the 'Nicaraguan Canal,'' and the 'Hay' treaty, but made the mistake to adopt negative policies without affirming a constructive policy upon these several questions, and hence it may be observed that the American people, through their party platforms and administrations, have invariably stood for a constructive, progressive international policy rather than a negative one; that on the whole they prefer peace and commerce with all nations and entangling alliances with none; the maintenance of the Monroe doctrine and the protection of American citizens in foreign lands; sympathy for the oppressed and encouragement to republican institutions; that on the whole they have opposed imperialism or force for the purpose of acquisition of territory, while standing equally strong for the American system of government and the rights of American citizens in foreign seas and the rights of American citizens in foreign lands, not only by party platform declarations, but by more than 40 instances of intervention by force during the past hundred years of administration.

"In the campaign of 1912 the marked difference between the Democratic, the Republican, and the Progressive platforms is noted. The Democratic Party took a bold stand in favor of the 'Monroe doctrine,' the 'efficiency of an army and navy,' the 'independence of the Philippines,' the 'protection of Americans in foreign lands,' and particularly the Jews in Russia, and a demand for a new Russian treaty guaranteeing these rights, and the 'Panama Canal,' which constitutes the broadest constructive affirmative declaration in many years touching an international policy, crowning these policies with the following bold and aggressive stand touching the rights of American citizens wherever resident or sojourning:

"We commend the patriotism of the Democratic Members of the Senate and the House of Representatives which compelled the termination of the Russian treaty of 1832, and we pledge ourselves anew to preserve the sacred rights of American citizenship at home and abroad. No treaty should receive the sanction of our Government which does not recognize that equality of all our citizens, irrespective of race or creed, and which does not expressly guarantee the fundamental right of expatriation.

"The constitutional rights of American citizens should protect them on our borders and go with them throughout the world, and every American citizen residing or having property in any foreign country is entitled to and must be given the full protection of the United States Government both for himself and his property.

"From all these platform declarations it will be observed that all parties that had for their support any great body of the American people have proclaimed adherence to the Monroe doc-

trine and 'the protection of American citizens at home or abroad.'"

GOVERNMENT BOTH SIMPLE AND COMPLEX.

Government, simple as it is, seems to be complicated, in this: That while we take heed of one branch of the public service we overlook another. We have personal relations to consider—that is, the relation between individual and individual, between family and family, which we call local administration or, more properly, county government. In addition, we have our State policies and administration, those pertaining to State government. And then we have our interstate relations, which concern us as an integral part of the Nation. In addition thereto, we have our international, or world relations. Wholesome government consists in a proper understanding and in a sound administration of law and of policy as it governs all these relations. We must look after our local or county relations, our State and National relations, but when we do this in the interest of economy and in the exercise of wholesome police power, should we overlook our international relations? Policies of other nations, lying in the secret minds of monarchs and cabinets, might undermine our world commerce, throw us in competition, not with other nations, but back upon ourselves, and what is greater, might undermine our republican institutions and at the end of a generation, by such policies on part of such foreign kings and cabinets, dismember our Republic or take from us a portion of our territory. At least such has been the experience of all history. Hence, wise government and a wise party policy consists in a thorough understanding and a full exercise of all the functions of government—county, State, National, and international. Not to have such a wholesome government in our administration would, "as surely as night follows the day," lead to the weakening of the source of our national peace, which, invariably, is productive of war, and leave us uncertain of that strength so necessary to our national existence.

This strength is not made up so much by armies and navies, but in the exercise and maintenance of a strong world policy such as will look toward holding our markets, the preservation of our institutions and those nations in sympathy therewith, and, above all, our peace upon the high seas by promoting our merchant marine to carry to every port our flag and establish there a market for agriculture, which can prosper only as trade prospers and as markets are surely established.

EMBARGO FALLACY.

In this connection I desire to quote from another five-minute speech delivered during the consideration of the deficiency bill:

"Mr. Chairman, the House will doubtless understand the difficulty I have in discussing a subject not directly in connection with this bill and yet conform to the rule, so that I may not be taken off the floor by a point of order. This paragraph relates to the Revenue-Cutter Service, whose duties, I am informed by the committee, will be to see that the revenues are collected; incidentally, of course, it will have to do with contraband goods.

"Mr. MANN. Well, they do not have anything to do with the collection of the revenue. I said the gentleman did not know.

"Mr. MURRAY of Oklahoma. I will accept the gentleman's information on that point. Incidentally they would have to do with the embargo against certain goods. This Nation has never, except in two instances, entered upon a system of embargo. First, in 1807 Mr. Jefferson, with an idea that the country could exist without any military force, conceived the notion that by retaliation and by exclusion of commerce war could be prevented. It was first favored by the agricultural States, but they later demanded its repeal when they suffered for a market. Jefferson lived to regret it, and it is the only policy that he advocated that he ever had cause to regret.

"In after years he said, speaking of the Shay rebellion:

"God forbid we should ever be 20 years without such. * * * What signify a few lives lost in a century or two? The tree of liberty must be refreshed from time to time with the blood of patriots and tyrants. It is its natural manure. (Jefferson's Work, vol. 2, p. 267.)

"Jefferson's own party repudiated the embargo doctrine. In 1809 Congress, fresh from the people, or at the behest of the people, repudiated that act of embargo. The President plead with Congress not to repeal it until the 1st of June, but in February they made the act take effect on the 1st of March. Now we have come to the proposition of an embargo upon a certain kind of goods that may be used in war, and that embargo is fixed under a resolution of Congress and declared by President Taft and still continues. If this is intended to continue I am opposed to it. The doctrine of neutrality in every nation, and especially of this, has been that a neutral power is not called upon to cause any of its citizens to sacrifice any of their rights to trade with the world.

"Mr. Jefferson, when Secretary of State, so stated to the British minister, and it was stated by every Secretary of State since when the question arose; and yet we say that because there is a war in Mexico or rebellion that the manufacture of firearms and of ammunition and of everything that may be used in war shall be prohibited from being shipped across the border, and so absurd is that doctrine and so unjust in its application that in El Paso a retail merchant stands indicted and under bond for selling cartridges to a Mexican in his retail business. The only limitation we can exact of a merchant is that if the goods should be sold and one of the belligerent parties gets possession of them he can not ask his Government for compensation for their destruction. I had hoped that since the experience of this country in the embargo act of 1807 to 1809 we would never engage in this policy again.

"Now, the President says he holds to Taft's order because he is opposed to Huerta. In that opposition I think he is wise, but inadvertently he is assisting Huerta, because the latter has the ports where they collect the Mexican revenue, and guns may be shipped through those ports to the Huerta government unless we close them.

"The patrol on the land border of Mexico by the United States Regulars cuts the insurgents off from getting arms, and thereby instead of making a balance between the two it creates a situation which aids Huerta, to the detriment of the insurgents. The only way to insure fair play is to follow the international law. Situated as we are, let American merchants sell their goods anywhere in the world under the international law, and give the contending Mexican bands equality. That would not aid Huerta but would put them both on the same basis. I cordially approve of the President in his opposition against Huerta; but I oppose such unjust restriction against American commerce, without which agriculture will suffer, as it did in the embargo act of 1807, which caused its repeal."

THE TRUE STATESMAN

The true statesman is he who looks into the future an hundred years and frames policies that will bring about wholesome measures of government. The true statesman arises above the present immediate effect and turns an eye toward the future, always formulating policies that will vouchsafe every wholesome relation of the citizen. It is because of this regard for the future weal of the Republic, for the safety of American institutions, the general welfare of American citizens, for the promotion of commerce, the handmaid of agriculture; for the perpetuity of national existence, together with the preservation of the white race, that I am thus persistent in contesting the views of others and in urging upon the present administration and the Democratic Party the necessity for the exercise of an active but constructive international policy.

NECESSITY FOR INTERNATIONAL POLICY.

History is replete with the policies of nations for the extension of domain under one monarch, to be dismembered by a weak and careless successor. Cæsar built up the Roman Empire, to be followed by a lack of policy which dismembered and destroyed it. Charlemagne and Frederick the Great, each in different periods of time, built up extended national boundaries, to have them destroyed by the lack of a continuous policy on the part of their successors. England, whose flag encircles the earth, whose drumbeat is heard in every clime, whose trade is in every mart and port of the world, did not bring this about by accident, but by a concerted effort on part of successive and consecutive administrations having this policy in view. Instead of using corporations, or rather permitting their use, as we have done, to build up monopolies and oppress the public Great Britain has used these great corporations for the purpose of extending her boundaries and promoting her trade. Through the East India Co. she established her commerce with the Orient, and without difficulty secured an empire in India. Through the Hudson Bay Co., without war, she got an eternal grip upon Canada, a territory of greater extent than our Republic. Through Cecil Rhodes and his associates she secured South Africa. I recite these policies as an incident of our necessity of an international policy—not that of conquest, to be sure, but one that will sustain the Republic, the preservation of American institutions, and the integrity of the white race.

THE REPUBLIC AND WHITE MAN'S CIVILIZATION INVOLVED.

The problem with Mexico, with the probable resultant complications growing out of it, both with Japan in her colonization agreement and with European nations who desire to protect their own citizens, confronts us with the gravest problem before the present administration. Our action for the purpose of protecting life and property would be approved by European Governments and the world at large, and this intervention would enable us to cancel the secret colonization agreements between the usurpers of Mexico and the Japanese. Hence the right policy now might determine the future political map of the world; it may determine whether republican government shall endure upon this continent. It may determine whether Mexico is to become a white man's country or to be under the control and domination of Asiatic races. It may ultimately determine not only the perpetuity of our own Republic, but the civilization of the Aryan race. The pages of history are replete with the rise and fall not only of nations but of races. One hundred and twenty-five years ago the French outstripped the English; 200 years ago the Spanish nation was the most extensive of all Europe; but now both the English-speaking race and English domination surpass either France or Spain. Is history to repeat itself and at the end of another hundred years to witness the dawn of the twenty-first century with the world's domination by Japanese and Chinese, both in point of number and empire? The Mexican problem may answer this question, and I am unwilling to have it said of me that I was charged, although in but a minor way, as a Member of Congress, in dealing with these problems, that I shirked the responsibility or failed to give that warning which my own intelligence, study, and investigation suggested as right and proper, even though I might be out of line with the authorities of the Government or with my own party. I want now to warn that party to which I belong of the history of the past—that no party has ever succeeded that did not stand squarely upon the Monroe doctrine and the protection of American citizens both at home and abroad.

PERMANENT REMEDY FOR MEXICO.

The remedy in handling the Mexican problem must depend upon the conditions as they arise. What would have been proper in the beginning of the trouble has undergone changes, and what this Government, in my opinion, now should do is quite different from what it should have done on the 4th day of March. It then should have given the insurgents arms by lifting the Taft embargo. What ought to be done now is that this Government throw a cordon of soldiers on the border of Mexico and take possession of every revenue customhouse, throw the Navy into every custom port and take possession thereof, and cut both Huerta and the insurgent forces off from every cent of revenue. This can be done without loss of life, and by collecting the revenues for 30 days neither side will have ammunition with which to fight. Out of this revenue thus collected this Government could pay indemnity to foreign losses, and if the Mexican people can not or do not establish peace and order among themselves, I would then, when they are stripped of all revenue and fired their last round of ammunition, march the American Army into the capital, take possession of the Republic, and issue a military order canceling the Japanese and foreign land concessions. I would issue another military order breaking up the big estates in Mexico and order them sold in small tracts to any purchaser of the white race; open up the remaining public land to homestead by Mexican citizens only, giving relief to the poor of that country; establish universal public schools for the education of every child in Mexico; and if need be, I would hold this military occupation, with this policy in view, for a generation, or until the children of the 9,000,000 illiterates have grown up to manhood and womanhood, with education and ability to govern themselves. This policy would end forever revolution in Mexico and give to her citizens justice and permanent peace.

It is true that white colonization of Mexico and the purchase by our farmers of the big landed estates when broken up would possibly follow, and if we are compelled to remain there for a generation it will have been settled so thoroughly by the Aryan race that, like the settlement of Texas, they will want to follow the retreat of our flag back to the United States; and if they should voluntarily vote to do so, I would accept them, because it does not violate our own interests to own every foot of land from here to the Panama Canal. It is an extension upon our own continent and not a colonial imperialism, such as acquiring the Philippines.

The foregoing policy can be inaugurated practically without the loss of life—certainly without the loss of as many lives as have already been lost, and certainly with less cost. It would be more humane to our own citizens and to the poor of Mexico. It would result in the awakening of civilization of the 9,000,000 oppressed citizens of that pitiable Republic. The cost would be borne out of the Mexican revenues.

OUR STANDING ARMY AND MILITARY STRENGTH NECESSARY TO PACIFY MEXICO.

Statements are often made that it would require a quarter of a million soldiers to settle the difficulty in Mexico. This would be the scope if the Army should be permitted to frame the military policy which should govern in such intervention. The United States has a surplus of "captains" and other commanders among the Regular Army who desire promotion to give them better standing and salary. This can be brought about only by a larger Army, either standing or volunteer. Their desire would be the mobilization of an Army of gigantic proportion for this purpose; but let us see whether this is necessary. The following discloses the comparative size of the standing Army of the United States to-day with the Army in the War with Mexico in 1848:

Number of enlisted men in the War with Mexico in 1848.

[From the Adjutant General's report, dated Dec. 3, 1849.]

Regulars and Volunteers	101,110
Number of officers and men of the Regular Army at the commencement of the war	7,365
Total	108,475

Number of Regular Army to-day.

Regular enlisted men	84,810
Commissioned officers	4,744
Total	89,554

The above do not include the enlisted men and commissioned officers of the Philippine Scouts nor the enlisted men with the Hospital Corps. So it will readily be seen that the Regular Army of the United States is quite equal to all element of raw recruits constituting the Army in the War of 1848. Besides, at that time we had to fight Santa Anna, the "Napoleon of the West" and Mexico's greatest military chieftain, with Mexico at peace with herself and amply prosperous, while to-day Mexico, is divided, with a depleted treasury, ruined credit, not only nationally but the wealth of the individuals swept away by an internal strife and banditti raids of three years' duration. Hence, it may be safely said that the present standing Army of the United States is all that is needed to settle the disturbance in that country. If any volunteers are necessary, every man of them can be raised either in Oklahoma or Texas, and all the Government has to do is to give the men an opportunity to respond to the call for duty.

MONROE DOCTRINE AND DEMOCRATIC RECORD.

The Democratic Party, under Monroe, had an eye to this result when, in the very weakness of our national existence, he proclaimed the doctrine that America, by reason of our independent position, should not be subject to the colonization schemes of the European monarchies. The same doctrine was in the mind of Grover Cleveland when he said to Great Britain in the matter of the boundary dispute between her possessions in South America and the little Republic of Venezuela: "You shall arbitrate that boundary dispute." And although Great Britain sought to deny the Monroe doctrine as international law, recognized it as a policy, in this, that she agreed with Venezuela upon arbitration of the boundary dispute. The Monroe doctrine, since its enunciation by Monroe in 1823, as it should, has undergone modification to meet new international problems, and now we have reached the period when the direct danger of having America colonized by European monarchies has passed, but we have reached a more formidable danger by having it colonized by the Asiatic races of Japan and China.

DANGER OF CHINA AND JAPAN.

In China alone live one-fourth of the people of the world, and there are enough of them to overrun our entire North American Continent, driving to poverty and the poorhouse the American laboring men, and yet their absence from China would scarcely be felt. Just last year, realizing this Asiatic race menace, the Senate of the United States, by an overwhelming majority, passed the Lodge resolution enlarging the Monroe doctrine, by declaring that when any harbor on the American Continent is so situated that the occupation thereof for naval or military purposes might threaten the communication or safety of the United States, the United States could not see the possession of such harbor in the hands of another Government, not American, as to give such Government control for naval or military purposes. This resolution was precipitated solely because of a rumored attempt of a Japanese fishing company to secure certain privileges on Magdalena Bay. This resolution passed the Senate by a vote of 51 to 4, and its design was to protect the American Republic from becoming colonized by the Asiatic races, and in this connection I might add that it would be far better to let Asiatics come within our own Republic than to see Mexico and the Central American States become overrun, settled, and controlled by Japan and China. To the Wall Street Journal and other "Eastern influence," who ask Members of Congress to declare to the world that we have abandoned the Monroe doctrine as unnecessary, my reply is that

we must preserve it to protect our own race, and the necessity therefor is far greater than it was in 1823. To colonize America by European monarchies would be to destroy our Republic, but would preserve white civilization. To colonize the American Continent with the Asiatic races would destroy our civilization as well as the Republic; would drive us back in competition upon ourselves and the American laborer to poverty and to the poorhouse.

War is an evil thing. It is to be abhorred. But there are worse things than war. To be dominated by an inferior race or to witness the destruction of the Christian civilization of the white race is a hundredfold worse than war. Governments throughout the world, so far as their boundaries are marked, largely exist because of race distinction, and however abhorrent war may be, I am ready to stand upon the shores of the American Continent and fight back any attempt to colonize this country with any races foreign to our blood, our sympathies, hopes, ambition, and religion.

JAPAN MUST HAVE LAND.

To be sure, we can not blame Japan for desiring more land. She must procure more land, and if need be, fight some other nation to get it or perish as a race and as a nation. She is sustaining 60,000,000 people on a territory smaller than the State of California, and she has but 15,000,000 acres more that is even susceptible of being reduced to cultivation, and this is in the mountains where it must be terraced at heavy public expense. This will sustain an increase of but one generation. Then Japan must have more land or commit race suicide.

THE PHILIPPINE ISLANDS.

In this connection it brings to our attention another policy, and that is the disposition of the Philippine Islands, upon which we are spending many thousands of dollars annually, and upon which we have already spent many millions of dollars. I would grant Japan these islands, in order to give them a foothold near their door, and in a climate to which they are inured but unsuited to the American, and thus serve the double purpose of probably preventing future war, and at the same time make of Japan a friendly nation, lying as a buffer between us and the other Asiatic nations, because we do not need the Philippines either for colonization or for strength. Rather is it from every light a source of weakness. Should we engage in a war with Japan, the proximity of the Philippines to the Japanese nation would whip us in our effort to carry our armament such a great distance. I call your attention to the fact that "distance" is one of the greatest elements in warfare. "Distance" whipped Napoleon when he went to Moscow, and in his retreat "scattered his legions like winter's withered leaves." "Distance" whipped England in her two wars with us. "Distance" enabled a few thousand Texas patriots to whip Santa Anna's forces, when he had to come to them to conquer them, and "distance" will enable us in a war between us and Japan to whip her off our shores, but it will whip us off the Philippines. So I submit the wisest policy would be to sell to Japan the Philippine Islands and hold the territory on our own shores, and if we expand, expand only upon the American Continent, in a climate to which we are inured and upon which we can live and prosper. There is but one objection to this transfer, and that is that the Philippines are, in a measure, Christianized, but this can be obviated by stipulating as an irrevocable part and condition of the transfer that missionaries and ministers of the Christian religion of every nation and of every creed shall have the right forever to go into the Philippines to teach and convert the people, and that one or all the Christian nations shall intervene for their protection.

MY CRITICS AND DR. LYMAN ABBOTT.

I wish to digress a moment to reply to the criticisms of certain persons and certain newspaper periodicals to their pretended interest in peace. We hear them say that no Member of Congress should announce a policy that might mean war unless he be willing to go. To this I reply that when my country needs me, either in a defensive or offensive war, I am ready to follow the flag, and I want to say further that the Army should not determine when war should be proclaimed, because war is the business of the Army and they should not be permitted to govern the policy of when it should occur, but exercise it only after the civilian has declared its necessity. On this point I desire to quote from a speech delivered by Dr. Lyman Abbott on May 14, 1913, at the nineteenth annual Lake Mohonk conference of international arbitration and peace. This speech was delivered by Dr. Abbott upon his being elected president of that great father of all international American arbitration conferences. Dr. Abbott is not a stranger to us. We have read so many of his books, as well as his learned articles which have come from his pen as editor of The Outlook. It may be said of him more truly than any other citizen that his mind is "an intellectual ocean, whose waves beat against all shores of human thought." Listen to his words, as follows:

"The reason that greater progress has been made is that for the last 14 years our appeal has not been primarily for peace but for justice and for peace following justice. [Applause.]

"In the present condition of the human race the armed man is sometimes a necessary means of securing peace, because a necessary means of securing justice. A somewhat humorous illustration of this self-evident truth was afforded at a meeting of the Peace Congress in St. Louis last week. A peace delegate on his way to a disarmament meeting encountered a pickpocket. A struggle ensued. The peace delegate was not a good fighter and was getting the worst of it. Two men came to his rescue. The mêlée became serious, and one man got a black eye. Then an armed policeman appeared on the scene and brought about both justice and peace. It is not without significance that we call our policemen officers of the peace. [Laughter and applause.] It is not without significance that we call our minor judges, whose business it is to deal with the first beginners of injustice, justices of the peace. It is not only the armed man, but sometimes the armed force, that is necessary. * * * Ladies and gentlemen, if it is right for one man to interfere to prevent an insult being given to a helpless woman, it was right for the Bulgarians to interfere to prevent their wives and daughters from being carried into the harems of the Turks, and right to suffer whatever consequences were necessary to furnish that protection.

"Combativeness and destructiveness are not vicious elements in human nature. They are not to be destroyed; they are to be guided by reason and directed to beneficent ends. There are times when war is necessary. The history of the world would be poorer than it is if there were no record of war on its pages; if there had been no heroes who dared to fight for justice and liberty; no William of Orange to array his country against the persecuting sword of the Duke of Alva; no Cromwell to stand for civil liberty in England; no Washington to lead the forces of America against foreign despotism. Christianity does not emasculate man. Christians have not stood and ought not to stand for peace at any price. They have recognized, and they ought to recognize, that there are worse things than war, bad as war is. Constantine was led to adopt Christianity primarily because he found the primitive Christians in the fourth century better soldiers man for man than the pagan Romans. Never have there been braver or better soldiers than the Puritan Ironsides, whose heroism gave liberty to England and to America.

"This truth the Bible abundantly recognizes. First pure, then peaceable, is its motto. In Paul's description of the Kingdom of God, righteousness, peace, and joy, righteousness precedes peace. There is no honorable peace which is not founded on righteousness. When Isaiah prophesied that men shall beat their swords into plowshares and their spears into pruning hooks, and shall not learn war any more, he based this expectation on his faith that the time will come when men will walk in the paths of God and the law will go out of Zion, enforced, not by the sword and spear, but by the intelligent conscience of self-governing peoples. 'If it be possible,' says the Apostle, 'as much as lieth in you live peaceably with all men.' It is not always possible. It does not always lie in us so to live. On the contrary, it is quite possible to pay too high a price for peace. Our fathers would have paid too high a price if, in 1776, they had bartered liberty for peace. The generation of the Civil War would have paid too high a price if, for the sake of peace, they had allowed the country to be rent in twain and a great slave empire to be founded, extending from the Ohio River to the Gulf of Mexico, and perhaps including Mexico and Central America. [Applause.]

"Enduring peace is possible only where it is the fruit of justice. The blow of the fist, the gleam of the sword, and the bark of the cannon will continue until some other power than that of the armed man is found to protect innocence from injustice. 'War,' says Charles Sumner, 'is a public armed contest between nations, under the sanction of international law, to establish justice between them.' With the convening of The Hague conference in 1899 there was wrought into the consciousness of mankind a better plan than war for establishing justice between the nations. The plan of a supreme court of the nations was not novel, but with the proposals of the American delegates to The Hague conference such a court ceased to be the dream of the prophet and became a purpose of statesmen. So long as mankind thought that there was no other method of securing justice between nations than armed conflict so long the plaintive cry of peace fell on unlistening ears. When a plan of securing justice was proposed that promised to avoid the tragedy of war, mankind began to listen. The proposal is nothing less than a substitution of an appeal to reason for the appeal to force. But before this substitute can be successfully adopted three conditions are necessary.

"There must be developed in the civilized nations a sense of justice strong enough to overcome race, religious, and national prejudices.

* * * * * * *

"There are two ways of promoting peace—one by making our Nation so weak that it can not fight; the other by making it so strong that it need not fight. Weakness is a terrible provocative of war. The War of 1812 would not have occurred if Great Britain had believed that we had a Navy adequate to protect our citizens upon the sea. It is doubtful if the Civil War would have occurred if Andrew Jackson had been in the President's chair instead of James Buchanan; it is certain that it would have been of shorter duration and of less terrible extent. America is one of the richest countries on the globe. Make it also one of the weakest and it would invite assault. It is the first duty of the Government to protect its people in the enjoyment of life and liberty. If it fails to afford such protection, it has no right to exist. * * * We can establish peace only by establishing justice. To do this we must by voice and pen develop in the Nation a public conscience which will demand the fulfillment of arbitration treaties already made before undertaking to make other treaties still more general. We must seek to develop a public sentiment in the civilized nations of the world which will both create a tribunal for the establishment of international justice and peacefully enforce its decisions; and until that is accomplished and the appeal to reason is accepted by our own people and the peoples of the world as a real substitute for the appeal to force, we must maintain an Army and Navy adequate for the maintenance of justice both within our borders and in our international relations; and we must never forget that our object in this movement is the establishment of international justice and of peace only as it is founded upon justice. [Applause.]"

I shall add to Dr. Abbott's able presentation of this doctrine that justice is the price of peace by quoting from another installment of our international duty as delivered by me in this House on September 4:

"Mr. Chairman, I am as much opposed to war as any man, but there are worse things than war. Rapine and murder are worse than war. In the early history of this Government we have other illustrations that showed the absurdity of moral suasion. We believe in moral suasion, but will it reach a mob? If it will, why do we not appeal to the anarchists of this country and remove the guards from the gates at the White House? If moral suasion is a sufficient protection against crime, why not repeal all the laws which provide hanging for murder? Let us be practical men. We know from experience that no argument will convince a mob except that argument be spoken through the voice of the cannon and musket.

"Peace and moral force—that is a great philosophy. It is the thing we hope for, the thing we are driving to, but which we shall never reach until the entire world is Christianized and they understand the philosophy of Christianity. The altruism or philosophy of Christianity is 'Love thy neighbor as thyself.' I call your attention to the philosophy drawn from history, that the first thing people think about when they first embrace Christianity is to fight. The spread of Christianity over Europe and the organization of the crusades to redeem the holy sepulcher is an illustration of that. The awakening of China and the breaking out of secession is another illustration. If I had time I could produce other illustrations to prove this nature of mankind.

"The philosophy of Christianity—'Love thy neighbor as thyself'—in its logical stage and Confucianism are the only doctrines in the world that believe in peace. Confucius said, 'Build a wall around you; let no one go out and no one come in; live at home'; and under that doctrine for 4,000 years the Chinese lived in peace.

"We choose to embark on the seas of world relations and a world commerce. Then we see that thereafter we have established expensive consular service throughout the world, with ambassadors and foreign banks, as provided in the bill just passed Congress, and we established the gold dollar that would be good all over the world. What for? To encourage commerce. We have long since learned that commerce is the handmaid of agriculture, and without commerce agriculture could not live."

INTERVENTION TO PREVENT WAR.

Many of our citizens forget that in the affairs of American Republics intervention does not mean war. We intervened, it is true, in Cuba, at the same time declaring war against Spain. It seems to be the policy of some to overlook the obligations of this Government until we are compelled to declare war against Mexico, but we can intervene for the protection of life and property. Cleveland's Secretary of State, Mr. Olney, once said, "The United States is practically sovereign on this continent."

Secretary Bayard, under Cleveland's first administration, when appealed to by a man named Cutting, a newspaper man, who published editorials like an ordinary American editor and as a result was arrested and imprisoned in Chihuahua—Secretary Bayard said to the Mexican authorities, "Give Cutting a trial and if he has violated the law, under international policy, he will have to suffer." They first declined to give him a trial, because he had violated no law, and then Secretary Bayard gave to Mexico the ultimatum: "You must try him or turn him loose"; and Mexico liberated him. Many citizens will remember that incident. The people of Texas, where I then resided, will recall that we all felt that there would be war, and every American said Bayard was right. They recognized the principle of international law that any citizen from any nation, where treaties existed authorizing them to live in their country, had the right of protection of his home government, providing he while living in such foreign country obeyed its laws and did not participate in its politics. This has ever been the rule, that if the foreigner attends to his own affairs, stays out of the politics and away from the voting places, and obeys the laws he is entitled to the protection of his own government; and it is the duty of his government to demand compensation for any unjustified assault upon him or any destruction of his property, and the foreign government where he is sojourning is liable to him for compensation for such wrongdoing, just as we a few days ago appropriated $6,000 to the heirs of an Italian who had been mobbed without authority of law in Florida. Proof that he was an Italian citizen, that he was not participating in our affairs, and that he was obeying our laws was all the proof necessary; nor does it follow that war will follow in an effort to secure to the citizen in a foreign land such protection to prevent such destruction of property or loss of life.

THE TRUE AMERICAN POLICY.

For years before 1912 we had taken a negative policy, but this time we pursued a constructive policy, and on that it may be asked, What is a constructive policy? I insist, Mr. Chairman, that intervention does not mean a declaration of war against Mexico or any other nation. It does not include imperialism, a large standing army or navy. It does not mean the acquisition of territory or involve any other program of force or sordid, commercial, dollar diplomacy nor a violation of any sound, progressive policy of peace. A sound, just, and comprehensive American policy consists in this: A well-equipped and thoroughly trained but relatively small army and navy; the extension of American commerce to all seas and ports of the world; peace, honest friendship, and commerce with all nations, entangling alliances with none; adherence to and maintenance of the Monroe doctrine as the sheet anchor of protection of republican institutions in the Western Hemisphere; the protection of American citizens, their property, homes, and families, whether found in America, upon our borders, or in foreign lands throughout the world; the preservation and integrity of the Nation and the glory of the flag; the encouragement of liberty everywhere and the extension of republican government and democratic institutions throughout the two Americas—all this by peaceful diplomacy if possible, by force if necessary.

That, Mr. Chairman, I conceive to be the genuine American doctrine. I am as strong an advocate of peace as anybody, and it is no new doctrine. I call attention to failures in the past in an effort for peace by an impractical policy. Up to 1807 we had for 20 years paid the Barbary States more than a million dollars to keep them from arresting American citizens. In 1787 we made a treaty with Morocco, in which we paid them $80,000 for the treaty not to make slaves of Americans. In 1796 we made one with Algiers, and paid $40,000 for the liberation of 13 Americans, and then we gave them tribute of $25,000 a year for exemption from capture of our people. In 1800, when the tribute was sent upon an American war vessel, William Bainbridge, the great American citizen, was compelled to go to Constantinople at the instance of the Bey, flying the Turkish flag. He then said: "I hope the next time that I pay tribute I can bear it with arms." Finally, after an effort to restore peace, paying them tribute every year, they, the Barbary States, themselves could not be satisfied and declared war on us, and what was the result? Decatur and Bainbridge went there and wrecked their ships. William Eaton, of the United States Army, went into the interior and organized an army and came across the border to dethrone the reigning Bey. When that treaty was concluded the first Christian Nation in the world said to the Barbary States: "We will pay you no more tribute." And yet that war cost us less; in all that war there were fewer Americans imprisoned and fewer murders committed than there were

during the 20 years that we paid the Barbary States tribute in the name of peace, in a vain effort to preserve peace by our servility. Such will our experience prove to be by such cowardly policy with the groups of banditti in Mexico. Less loss of life and property will occur if we will boldly stand upon our treaty rights with Mexico and make their mobs to understand that no American citizen must be harmed.

OTHER INSTANCES OF INTERVENTION.

In 1891 we went to the extent of intervening in Chile to decide between two contesting parties as to which should have control of the Chilean Government. Our Navy patrolled the Pacific coast to prevent arms from coming to one of them, and to that case arms were attempted to be furnished to the unfavored party by the steamer *Itata*, and one of our men-of-war chased the *Itata* for this violation of our intervention for a thousand miles and brought her back to San Diego.

The citizens will also recall the *Baltimore* episode in 1893. The *Baltimore*, with 117 men, landed at Valparaiso, Chile, by order of Secretary Blaine to protect property of American citizens. As a result an apology was made, $75,000 damage indemnity paid for 2 men killed and 18 wounded, although a judicial inquiry was had and a dismissal by local authorities.

During the Civil War we intervened in Brazil, and five men-of-war were sent to Brazilian waters under Admiral Bingham to protect American interests.

In 1894 occurred the Bluefields case in Nicaragua.

In 1895 was, as I stated, the Venezuela question.

In the Spanish War we had trouble again with Brazil and sent a warship to Central American waters for the protection of American interests, and had a difficulty with Ecuador over the refusal of the consul general to answer the service of a summons.

We made a peremptory demand upon Colombia for damages sustained by two newspapers in Panama owned by Americans. In 1902 Colombia seized some American property, and when we sent a warship into her waters she returned it.

We put straight up to Chile, in 1909, the demand to pay the Alsop claim.

Several European nations whose citizens had been the victims of Santo Domingo, who violated contracts, were talking of seizing the customhouse to repay them. President Roosevelt, under the pressure of our moral obligation under the Monroe doctrine, accepted the responsibility under which the United States took control of the administration of the customhouse in order to repay claims of Americans and other foreigners for property damaged.

Within the past three years we have twice landed troops in Central America and taken an active part in their internal affairs under the moral obligation of the Monroe doctrine.

The very purpose of encouraging American citizens to go into another nation is to carry on commerce and trade. We defend that trade. In 1842 we sent a navy to China to conduct the ships of merchandise through the straits. In 1843 we landed the marines on the coast of China, when there were then only 200 Americans in all China, to protect those Americans, or a portion of them, from a mob. In 1863 we opened the ports of Japan by force of arms in obedience to a treaty made with Japan in 1852 or 1853 by Perry. And never have we had war when we stood upon the rights of treaties, nor will we have war when we stand upon the rights of treaty, although we have intervened more than 40 times to protect the lives and property of our citizens in foreign lands.

MODERN MONROE DOCTRINE.

The Monroe doctrine as applied in modern times is no better stated than in the message of President Roosevelt to Congress in 1904:

> All that this country desires is to see that neighboring countries are stable, orderly, and prosperous. Any country whose people conduct themselves well can count on our hearty friendship. Flagrant wrongdoing, or an impotence which results in a general loosening of the ties of civilized society, may in America, as elsewhere, ultimately require intervention by some civilized nation on the Western Hemisphere. Adherence of the United States to the Monroe doctrine may force the United States, however reluctantly, in flagrant cases of such wrongdoing or impotence, to the exercise of an international police power.

Who is there that will dispute this doctrine? If undisputed, how can he deny the existence of "wrongdoing" or of the "impotence" of Mexico, or of her "general loosening of the ties of civilized society"? Is it not time for our Republic to exercise an international police power—not war, but police power?

Everyone agrees that Mexico is without authoritative government—that neither the revolutionists nor the de facto government of Huerta can establish order or preserve peace within their respective jurisdictions. Every breeze brings from the border of Mexico fresh outrages upon American citizens' lives and property. Gen. Salizar, one of the revolutionists, rounded up a group of Americans last year and said to them:

> We have driven away your cattle, burned your homes, and raped your women. What can we do to make your country fight?

What more is necessary for the exercise of "international police power" to restore order and protect lives and property?

Upon the same principle that an individual would run to the rescue of his wife and daughter, Dr. Abbott justifies the Balkans in fighting to prevent their wives and daughters from being carried away to the Turkish harem; and by the same logic and moral principle should this Republic go to the rescue of the homes and families of American citizens sojourning in Mexico and to the cry of American womanhood. For less cause than outraging our womanhood and trampling upon the ashes of our dead did we intervene in the Spanish possession of Florida before we bought that country. We sent our armed forces there to protect property, and what kind of property? Slaves who had run away and were carried by the Seminole Indians into the Spanish territory of Florida. Nor did we stop to consider what it would cost to carry out that obligation. The records show that it cost the lives of three soldiers and $80,000 for every slave we brought back.

STATESMANSHIP OF GEN. JACKSON.

Gen. Andrew Jackson said to the Secretary of War:

> It will not do to continue in this manner this warfare. We must chase the Spaniards and the Seminoles into Spanish territory and punish them there.

Recognizing the possibility of war, he pointed out the desirability of our owning Florida, and said:

> If the President wants Florida, all he has to do is to tip it off to me, and I will get such possession that Spain will readily cede it to us in 60 days, and that without involving the Government.

An instance of a far-sighted policy which extended our domain. Later, when he was President, he said to Sam Houston:

> Go to Texas and aid that revolution. The United States will be neutral, but no American will be punished for going across the border.

And the "Twin Sisters," the cannon that did the effective work at San Jacinto, was purchased by the ladies of Cincinnati and sent to Houston.

Another policy of President and Cabinet which brought additional domain, and, indeed, it may be said of Andrew Jackson that through his influence, directly or indirectly, we have Florida, Louisiana, and Texas as a portion of our domain, and who is it now that would contend that this was not a wise policy, and who is it now that would contend that we do not need these countries?

Why did we seek Louisiana? It was wholly due to our interest in a larger commerce and in affording a market to the farmers of the Mississippi Valley. The first controversy arose between the original Spanish authorities over the right of the farmers to deposit their sugar, cotton, and tobacco at New Orleans, and the Spanish intendent, after authority had been granted by treaty, nullified the "right of deposit," which crippled the market of the pioneer farmers. In the meantime Louisiana was secretly ceded to France, and Mr. Jefferson submitted to our French representatives, Madison and Livingston, a request to purchase Orleans, when Napoleon, realizing that on account of its great "distance," the English Navy might take it away from him in a day, ordered his secretary of state to sell to us the entire Territory of Louisiana, then extending westward to the Rocky Mountains, for 65,000,000 francs. Livingston and Madison bought it all, solely to get Orleans and the "right of deposit," for commerce, and yet prior to this purchase we had deliberately intervened, in obedience to treaty rights, such as to have offended the Spanish nation if they had yet owned it.

THE DIFFICULTY IN REPAYING OUR CITIZENS.

There is another phase to this question touching life and property in Mexico. The State Department a few days ago quoted the correct rule of international law when Secretary Bryan sent to the American consul at Hermosillo an opinion of the State Department to the effect that the Mexican Government could not be held responsible, ordinarily, to alien residents for injury they may receive within his territory from "insurgents whose conduct he could not control." This is undoubtedly the correct enunciation of international law as we have recognized it.

The United States Government recognized in settling with Spain that the destruction of American property in Cuba prior to American intervention was not chargeable to Spain, because Spain had no control over Cuba, on account of the Cuban revolution. Now, let us analyze this situation a bit. It has been estimated that some five States in northern Mexico are under the absolute control of the insurgents, and six others under partial control, while the remaining territory is under the control of Huerta, whose Government we refuse to recognize, and in my opinion properly so; so after peace is restored, should we call upon Mexico for compensation for American property which has been destroyed, estimated now at $510,000,000, the President of Mexico then in control, and who restores order in Mexico, could reply to the United States demand: "We are not chargeable for any destruction of property, for the reason that no Government existed in Mexico as was recognized by the United States," and if the United States then establishes the point that a de facto government existed under Huerta, Mexico can at least invoke the international law as to the country under the control of the insurgents where 30,000 Americans out of forty-odd thousand live and had their property, and consequently they have lost their all. The Mexicans will make the further plea that the American citizens did not "exercise ordinary precaution to preserve their property," which under the general law of the land is incumbent upon every man, because they fled Mexico and left their property without guard or attendant, and that without the solicitation of the Mexican authorities. Now, in this difference of opinion as to what should have been done and what we should now do, I submit the wisest policy would have been intervention the moment an American citizen was molested, and when I refer to American citizens I do not mean those who held great concessions of mines under syndicates, because those have never resided in Mexico, but there were seven colonies composed originally of American citizens, who have gone there and builded homes, opened up farms, established roads, and in "Colonia Diez," in Chihuahua, they had with their own money builded an agricultural and mechanical college, and a Member of this House, Mr. STEPHENS of Texas, had, as he tells me, visited that college and made a speech to these American students who lived in that colony.

But we have said to them, "Come out of there." They have come back home to compete in the labor markets, wherein they can not be of any service to other American citizens and without hope of regaining their homes or their property. But little hope is left a poor man who through years of perseverance, persistent labor, and self-denial in a pioneer country established a home, to be immediately stripped of that home and all that he owns and thrown back into the cold contest of competition to regain it again. No; I would have gone into Mexico and protected these citizens on the spot, especially in view of the international law; in view of their right under treaties made with Mexico for them to live there; in view of the further fact that Mexico invited them there, granting them the right to buy and improve these homes and reserve their citizenship in the great Republic; and in view of the further fact that there are three several clauses in the Mexican Constitution defining and granting the rights of foreigners living in Mexico. In this connection I desire to quote from another speech, under the five-minute rule, delivered by me in the House on September 4, on the deficiency appropriation bill:

> "Mr. Chairman, this appropriation seems to be intended to assist American citizens to leave Mexico. I want to preface my remarks by saying that I have no property in Mexico and no relatives there; neither has any member of my family any property in Mexico.
>
> "This is the first time in the history of diplomacy that I have ever known a request for the citizens of one country to leave another country in the face of the declaration that there would be no war. Let us analyze this proposition of paying the way of American citizens out of Mexico and a listing of their property. Who is to guarantee the repayment of that property in the event that it is destroyed by the bandits in Mexico? Evidently this Government can not do it under its present policy. It will fall upon the future administration of Mexico. Let us assume that it will amount to no more than $1,000 apiece for each of the 40,000 Americans in Mexico, on an average. That would make it amount to more than $40,000,000, and it is fair to say that it will amount in the aggregate to a billion dollar claim upon Mexico, which will stagger that country, without counting the expense of its civil butchery.
>
> "And where will those American citizens ever get the return of their property? Yesterday we witnessed here a controversy over the payment of $6,000 to the heirs of an Italian subject who had been murdered in this country. What will it be with Mexico after the trouble is over, if it ever ends, and we demand the payment of that $1,000,000,000? It will end there unless we enforce it by arms, and it will cost more to enforce it then than to protect this property now."

COMANCHE INDIANS CAUGHT OUR CUB.

The policies since the Civil War touching international relations have too often been illustrative of a story for which I am indebted to Gov. Douglas H. Johnston, of the Chickasaw Nation, told about the Comanche Indians in a very early day. He said that before white settlements were made there came a drought, when there was no corn, no supplies, stock water had dried up, and the cattle were dying out or driven off the range. The Indians were about to starve, and realizing the Government's ignorance of their condition they called a council to determine upon ways and means of making known to the Government their condition, since their petitions and memorials had been ignored through "red tape." It was finally decided that if they would kill a white man the Government would hear of that. But there were no white men, except the Indian farmer sent among them by the department, "Farmer Jones," and it was suggested that they would kill Farmer Jones; and when, after further deliberation, they realized that Farmer Jones did not amount to much anyway and the Government would never hear of it. Then it was suggested that they ride across the country and kill a cowboy, and upon second thought they realized that would not do. They said, "Cowboy got nothing; cowboy he kill you; he never tell Government." And then it was suggested that they would kill the Indian agent; he was an officer and "somebody"; the Government would hear about that; so, in order to bring their condition to the attention of the Government, they killed the Indian agent. The trouble has been that we await the blowing up of a *Maine* or the killing of some high officer before we think of our obligations. Now, the Government ought to have heard the cry of Farmer Jones as quickly as it heard the cry of the Indian agent. The cry of the American womanhood should be heard in every land in the darkest corners of the earth as quickly as the cry of an ambassador, and this Government should be ready to go to her rescue, and that without calculating the cost of her protection. But it seems we have forgotten our reasons for taxing ourselves in time of peace to maintain our Army and Navy. There are wholesome reasons for this policy, but we seem not to use them for that purpose.

PURPOSE OF STANDING ARMY IN TIME OF PEACE.

There was an instance which happened upon the Mexican border since the beginning of the Mexican trouble that is illustrative of the laxity in some quarters of the United States Army toward leading a life of indolence, luxury, and aristocracy. Less than two years ago Salizar came across the line and took from the United States military camp a rapid-firing gun and 250,000 rounds of ammunition and hauled it off in a wagon in broad, open daylight. Of course, no one was on guard; they were enjoying, doubtless, a convivial revelry and had but little thought of the duties and obligations incumbent upon them, and in this connection I want to incorporate here another speech of mine, delivered on the 6th day of September, under the five-minute rule for discussion, after the Clerk reported the items for appropriation:

> "Subsistence of the Army, fiscal year 1913, $220,625.16; water and sewers, fiscal year 1913, $443.85; in all, $654,448.49.
>
> "Mr. Chairman, I move to strike out the last word. Mr. Chairman, possibly what I intend to say would have more bearing upon the general appropriation bill that will arise in the next Congress. Here is a large sum appropriated for Army purposes. I have a notion that the use of these Army purposes is not what ought to be made.
>
> "I am not ready to vote for a continuation of Army and Navy appropriations if they are not to be used for the purpose for which they are legitimately intended. The only arguments I know of that will sustain appropriations for the Army and Navy in time of peace are these: First, to repel an unexpected invasion; second, to suppress insurrection or riot; third, to enforce neutrality and treaty obligations; fourth, to protect our citizens in foreign lands and commerce on the high seas; and, fifth, to form a nucleus around which an army may be organized and officered in case of war.
>
> "Mr. MANN. Mr. Chairman, I make the point of order that the gentleman is not in order. He is not discussing the matter before the committee.
>
> "Mr. MURRAY of Oklahoma. Now, the gentleman's imagination, he will find, is not true. I am discussing the propriety of making appropriations for the Army and Navy.
>
> "Mr. MANN. Yes; but that is not involved in these items.
>
> "Mr. MURRAY of Oklahoma. I am speaking of the whole paragraph. I perhaps might have put it in a little earlier, but I thought I would wait until the entire sums were reported.
>
> "Mr. MANN. The gentleman waited too long. I make the point of order——
>
> "The CHAIRMAN. The Chair thinks the gentleman from Oklahoma [Mr. MURRAY] is in order.
>
> "Mr. MURRAY of Oklahoma. I hope my time will not be taken up by the gentleman's objections. Mr. Chairman, the objects of an army or navy are those that I have stated. If any man can

give any reason for the taxation of the American people in time of peace for an army and navy for any other purpose, I would like to know it.

"But we find that our armies are too often used for some other purpose. We find in the organization of the military establishment of this country that it is largely used to aid certain towns and localities. We find, in addition, that the scattering of our Army posts has crippled the efficiency of the Army. I can prove by the military experts of this Government or of any other first-class power in the world that a stronger military power than our military arm can be inaugurated for $5,000,000 less than it costs to keep up our present establishment. Besides this, they are used to build up an aristocracy. In the Naval Academy, when we appoint a boy as a congressional right, if the boy fail, before the boy knows it or before I or one of you know it, some man who is an officer in the Army or Navy will send a telegram, 'Your boy has failed, and therefore I want my boy appointed.' The only aristocracy built up in this country has been built up through the Army and Navy. To my thinking, that is a wrong use and a wrong purpose for the Army. And then, again, we find that the Army and Navy are used to promote the Steel Trust; but the greatest abuse of its use is when it is made to fire on a lot of laboring men in a strike.

"Now, if these are the purposes for which our Army and Navy are to be used, and they are not to repel insurrection, to enforce neutrality, to protect commerce and the rights of treaties, and for the protection of life and property of the American citizen in foreign lands, I am ready to quit voting for an army and navy in time of peace."

There is another reason why we should not permit this anarchy to exist at our door, and that is the example to our own citizens. This ought to be apparent to everyone, and hence I will not take time to discuss this phase of the subject; but I confess that the main object is the protection of American property and lives, and especially womanhood, and beyond and above all to prevent the Mexican Government from granting to Japan concession to colonize Mexico.

CONDITION OF MEXICO.

I do not believe that, if left alone, Mexico will ever rise from its present condition. It has some 15,000,000 people, only about 6,000,000 of whom can read and write. Of these 6,000,000 about one-half are plutocrats pure and simple. They own all the property; they have no regard for patriotism, law, order, or the rights of other men. They have held the Government under despotic Diaz for their own selfish interests, and they do not care for order unless it is to continue them in possession of the property of Mexico. Of the 9,000,000 that can not read nor write the large body of them are Indians, and, I might say, as is the experience of all, they are among the best citizens there, as one of the contractors said to me, fleeing from Mexico, as a laboring man "The more Indian there is in his blood the better he is." These are the descendants of the old Aztecs, who possessed a high degree of civilization at the conquest by Cortez. The records show that although the great body of them were sun worshipers, yet they had a knowledge of the omnipotent, impersonal One, an unseen God which all Christianity worships.

These Indians under the Diaz administration had been treated so cruelly that they are against any Mexican domination. They aided in the destruction of the Diaz government, and when Madero came in they turned against him. They think infinitely more of an American citizen than they do the white Spaniard, and they have for 30 years harbored a deadly hate for the Mexican, who has despoiled and murdered them. Hence, I say it will be a long time before order can be restored; and, indeed, when it is over it will be because of a weakened condition—so weak that they can not fight. We may have at our door a repetition of what occurred in the Republic of Paraguay, in South America, during the cruel and despotic reign of Lopez and Lynch. For 20 years a revolution and banditti reign existed in Paraguay. At its beginning there were 700,000 citizens. At its end they had 300,000 women and but 125,000 old men and boys and had lost the unit of government, the family, which resulted in loose morals and in in-and-in breeding, and consequently imbecility and lunacy; and they were compelled to enact a law giving to every Paraguayan woman a pension for life who became the mother of two children by any foreigner, whether in or out of wedlock, so that the race might not be weakened by imbecility and idiocy. For Mexico herself, for her own preservation and interest, the wisest policy has been and now is for the United States to intervene and stop this civil butchery.

NATIONALITY AND INDIVIDUALISM BALANCED.

In our onward progress toward a centralized despotism, crushing States and their local police power, usurping the rights of the individual citizen, without regard for that just balance of power so essential for national strength and the fullest amount of liberty; in our mad rush onward toward a repetition of the Roman system which caused its destruction, are we to lose sight, as did Rome, of the rights of individuals? Under the Roman Empire every Roman was for Rome, and Rome as a nation was never regarded as for the citizen or individual. Every right, every individual effort, and thought was surrendered to the interest of Rome. When the farmers of Rome, by their splendid knowledge of agriculture, who as farmers surpassed any now known to the Continent of Europe, began to develop an individuality so characteristic of the farmer as an occupation, the Roman "agrarian laws" were passed, which placed the title of all agricultural land in the nation of Rome, so as to enable the nation to jerk from under the farmer his possession at any time, leaving him only a "possessory right," and this system so discouraged him, so weakened his individuality that he lost heart, and with it the method and knowledge of production. High cost of living followed, the empire and its civilization fell, ushering in all of those superstitious centuries known as the "dark ages." Are we to repeat this history? Are we to overlook the interest of the individual? Are we to declare that every American is for the Nation, and the obligation of the Nation to protect the individual nowhere exists? If not, then the Nation must heed the cry of every man and every woman to protect him, his family, and his home, whether he be in America, upon our border or in foreign lands. By this system, and this alone, will we maintain that equilibrium between nationality and individual rights so essential for the protection of the individual.

I am appealing for the doctrine, not that we should overlook the "sinking of a *Maine*," an assault upon a minister or an ambassador or one of our embassies in a foreign land, or the killing of an "Indian agent," but I am making appeal that this Republic may heed the cry of "Farmer Jones" as quickly as it would heed the cry of the "Indian agent"; that we must heed the cry of the "woodchopper," as did Great Britain in Nicaragua, and we must heed the cry of American womanhood as quickly as we would heed the cry of an assault upon the American ambassador. This doctrine, under international law, between treaty-making powers granting it, is so just and so thoroughly recognized by every civilized nation that the enforcement of it is but to declare it with emphasis and earnestness, and a declaration with earnestness to protect it has never been the cause of war. War comes in where justice ceases. Exercise of justice and humanity and national declaration therefor should ever be sustained by the Army and Navy if necessary.

BRITISH REGARD FOR HER CITIZENS.

In the Nicaraguan revolution of some 20 years ago the President, thinking some American citizens had sided with the insurgents, rounded up some 200 American citizens and imprisoned them. It happened to be in one of our administrations when the policy was to call them "American renegades," unworthy our protection, but among them was one man, a woodchopper, who set up the plea that he was a British subject. Nicaragua disputed this, and the British Government said, "We will see." They found that he was born in Canada, reared in the United States, but never had taken out naturalization papers and never had attempted to vote, now in Nicaragua as a woodchopper, and upon these facts the British Government said to Nicaragua: "You must pay the expenses of this investigation, which is $50,000, and compensate him for his imprisonment." He would not have been arrested if it had been known that he was a British subject, because Great Britain never hesitates to exercise her rights under international law to protect her citizens everywhere.

THE HOME THE CITIZEN'S CASTLE.

William Pitt, England's great statesman, once said in the House of Commons, in an effort to check British harsh exactions upon the American Colonies:

> Though a British subject live in a log-wall hut, the roof may cave in and the door may creak upon its hinges; the winds may howl around it; the snow and hail and rain may enter it, but no King can without his consent—his home is his castle.

Such is the theory and practice of the British Government. Such is the theory of our Government, and I but plead for its practice. If we expect every American citizen, wherever found on the earth, to respond to his country's call, we must give him protection when he calls for it. But would you, placed in Mexico or elsewhere to live, being stripped of your property, your home burned, and your family outraged, feel like responding to the call for volunteers if this country should embark in a struggle with some other nation? Take the question home to yourself and apply it in a concrete way. The home of the citizen should be protected wherever found, whether that be amid the palatial residences of the denizens here in Washington on the Avenue of the Presidents; whether among the mansions on Fifth Avenue, New York, whether amid the huts and hovels of the Mississippi Valley, or but the tented traveler on his westward journey—wherever found, to use the language of the Baltimore platform, "whether in America, upon our border, or in foreign lands throughout the world," the flag of our Republic should go with Them.

O Flag of our Country, wave on, wave ever! May it never be substituted by the ensign of European monarchy or fail us as our standard in the Asiatic race conflicts of the future.

Flag of our Country, wave on, wave ever! May it ever remain the sheet anchor of the Monroe doctrine and American institutions and the inspiration of every lover of political, civil, and religious liberty throughout the world.

O! Flag of our Country, wave on, wave ever! May every American be wise enough, brave enough, patriotic enough, to unfurl it as the shield of protection as readily as the emblem of liberty and love!

Foreign and Domestic Commerce.

EXTENSION OF REMARKS
OF
HON. CHARLES C. CARLIN,
OF VIRGINIA,
IN THE HOUSE OF REPRESENTATIVES,

Thursday, November 13, 1913.

Mr. CARLIN. Mr. Speaker, the subject of our foreign and domestic commerce is one of which the whole American people are deeply interested, and as there has recently been an exhaustive review of this important subject by the present Secretary of Commerce, Mr. Redfield, I am glad to give to the House and the American people the opportunity of an immediate insight into the great work of the Bureau of Commerce and its relation to our domestic and foreign commerce. I insert, as a part of my remarks, the following:

SUMMARY OF ADDRESS OF HON. WILLIAM C. REDFIELD, SECRETARY OF COMMERCE, BEFORE THE DETROIT BOARD OF COMMERCE, DETROIT, MICH., OCTOBER 21, 1913, ON THE SUBJECT OF RELATIONS OF THE DEPARTMENT OF COMMERCE TO THE BUSINESS WORLD.

Mr. Redfield spoke in some detail of the organization of the Department of Commerce, with its nine bureaus, comprising the Lighthouse Service, the Coast and Geodetic Survey, the Census, the Bureau of Corporations, the Bureau of Standards, the Bureau of Navigation, the Steamboat-Inspection Service, the Bureau of Fisheries, and the Bureau of Foreign and Domestic Commerce. He said the department employed over 8,000 men, of whom but 1,500 were in Washington, the balance being scattered all over the world, from the Philippines to Hawaii, and in Alaska, while the commercial agents of the department were in South America, Asia, Africa, and Europe. A specialist on cotton manufacture has just been sent to Japan and China to study the cotton interests there; an expert on coke by-products is investigating such matters in Europe; a special monograph on commercial opportunities in South America is now in course of preparation, and it is expected within a short period to send to South America a student of banking and credit conditions in that country, who will make a special investigation of this subject.

Mr. Redfield then said: "The work of the great bureaus into which the department is divided is perhaps of more especial interest now on what I may call its inquiry, rather than its administrative side. One or more of these inquiries have aroused some public attention, but rather little is known of them in detail, and still less is known of the plans which the department purposes to undertake if funds are provided. This is a very large 'if,' for it must always be remembered that the department may propose, but Congress may effectually dispose, by declining to furnish either part or all of the funds with which the necessary work is to be done. For example, at this present moment the inquiry into the pottery industry, which is a very important and intended to be a very helpful investigation, is almost at a standstill for lack of funds. Assuming, however, that Congress will be kind, let me say what we purpose to do in the way of direct promotion of American trade abroad.

"I assume you are aware of the great advance of American export trade in manufactures during the last year. It is one of the great stories of American conquest and should fill every American with just pride. Time was, within the memory of most of you, when we sold abroad chiefly the products of our fields and farms or of our mines. We were known as a food-exporting country, and in a sense did largely feed the nations. That day is gone. Our exports of crude foodstuffs are but 18 per cent of the total, and the major place in our export trade is filled by the products of our manufactures, in which work you of Detroit have had a large share.

"So many men have believed the gospel of inability that it must be a rude shock to them to discover that while they have nursed the theory that we could not meet the foreigner on his own field, we are, as a matter of fact, doing so. To sell our manufactures abroad to the extent of over fifteen hundred millions in value in one year is no small thing; but when this continues to expand at the approximate rate of half a million dollars daily, and when in this total the largest item by far is that of fully finished manufactures, which is not only, as I have said, the biggest item, but that which is growing fastest, then the statement is very much more marked.

"We feel, therefore, in the Department of Commerce that the tide of American business in the foreign field is at the flood, and that its course should be made as easy as possible, and that the Government should assist in every practicable way toward bringing the gold of the nations into the purses of our manufacturers. The Government means to this end have been very trivial heretofore. A bare $60,000 has been the total annual fund for the promotion of commerce, and it has, upon the whole, been well used. Yet if this sum, which is much less than many a single establishment pays for its advertising, be compared with the vast volume of our foreign commerce, which is, in total, in excess of four thousand millions annually, its insignificance relative to the opportunity becomes humorously apparent.

"Nor has our organization in the foreign field been what it should be. We have had consuls, and the Consular Service has of late much improved, but the consul has much to do that is not related directly to commerce. His time for promotion of commerce is limited. He has diplomatic and administrative matters to which to attend. He is, furthermore, limited in place and may not be able, for lack of time or because of his fixed habitat, to take up some quite important inquiry at some distance from his post. We have had, in a modest way, commercial agents, some 16 in all, who have taken single subjects and inquired into them carefully. But it will be many long years before American commerce will be fed fat from the labors of 16 men, however able and earnest and well-directed their efforts may be. Germany is said, on what I think good authority, to maintain in this country permanently a force, under regular pay, of from 200 to 250 men, and I am informed that if those who receive temporary pay are included Germany has as high as a thousand or more of her commercial servants in the United States each year.

"We purpose, then, to have the beginnings of a new organization abroad, by putting into 14 important cities—including London, Paris, Berlin, Vienna, and St. Petersburg in Europe; Tokyo and Peking in eastern Asia; Melbourne in Australia; Lima, Santiago, Rio, and Buenos Aires in South America—'commercial attachés,' accredited to our embassies, but under the supervision of the Department of Commerce, and reporting directly to it; men who shall be paid from $4,000 to $5,000, according to the responsibility of their post, and be each furnished with a moderate fund for traveling purposes and a clerk. The duty of these men would be to provide that general study of the industries and commerce of the nation to which they are accredited which the consul can only do in a local and limited way. The consular force and the commercial attachés would be complementary to each other, one supplying what the other lacked. One would fill the local field, the other the general field; and the commercial attaché would have the advantage that his sole duties would be given to commercial activities and none of his time be taken for diplomatic or other work.

"We purpose to retain also (and, if funds are provided, to enlarge) the force of commercial agents, so that we shall thus—if and when the organization is completed—have a threefold force, which I may thus restate: The commercial attaché, resident in the great capital, with all the industries and commerce of his nation of residence as the subject of his study; the consuls, each in his local field, doing his present work, and doing it, we hope and believe, the better for the assistance of the officer with the larger view; the commercial agents, each dealing with a particular subject, movable men going from nation to nation until the study of their particular themes is completed. This force, even if completed as we hope, will be most modest. There is not one of the great competing nations that will not far exceed us in the outlay of both money and men for the same purpose. Still, it is a beginning, and seems to us to have in it the germ of great good to all our people. To secure this beginning we shall ask of Congress in

the coming year for this bureau a sum rather more than double that which has been provided for the Bureau of Foreign and Domestic Commerce hitherto. It will not be, after all, a large sum, as nations reckon—about three-quarters of a million dollars in all, to cover every expense both at home and abroad—and the force, all told, exclusive of the consuls, who are under the State Department, would not exceed 150 men in this country and a total of 75 abroad.

"Another development of this same work is that we plan, if we get the funds and the sum mentioned is sufficient for the purpose, to put an office of the Bureau of Foreign and Domestic Commerce into each of four great cities—New York, Chicago, San Francisco, and New Orleans. The office in New York is already begun; for the others we have not as yet sufficient money. The clerk in charge in each of these cities would keep in direct touch with inquiries as to facts in the foreign field; would have at disposal the publications of the bureau, which are the reports of the consuls and of the commercial agents, and would include the reports of the commercial attachés. Inquiries could be addressed to the local offices by manufacturers as to matters in which they were interested or inquiries they would like to have made. This is merely one step in bringing the organization closer to the average business office.

"Another and perhaps more important step is to arrange that the commercial agents as they return from their foreign trips shall go from city to city in this country, visiting boards of commerce like your own, and telling face to face to such gatherings what they have seen and found in the foreign field. This might lead to their answering individual inquiries from different concerns, and would be a very direct and simple means of bringing the facts home to our industries. In short, the commercial agent would be a man who would go abroad to learn and come home to teach, and who by his written reports and his personal statements would come in direct touch with any of you who were interested in the study he was making.

"I need hardly say, however, that although this plan has been very carefully worked out and has been approved in its general form by the United States Chamber of Commerce and has the written approval of the President, it depends for its birth into actual fact upon the will of Congress. The estimates which have already been prepared for the fiscal year commencing on the 1st of next July, contain this plan as it is outlined to you. If you approve the suggestions I have no doubt that a statement from you to that effect would be welcomed by the Appropriations Committee, before whom the matter must in due time come.

"Another very different and new form of activity is contemplated by the Bureau of Corporations, of the department. This bureau has done some admirable work in the past, but its resources and possibilities have not been utilized as fully as, in my judgment, they now should be. Indeed, they have been so little used that considerable sums of money have been turned back into the Treasury unused from the appropriations for the bureau. Despite this fact, we shall ask from Congress a considerably enlarged sum for the fiscal year to follow, a portion of which will be devoted—if our request is granted—to use under a very different conception of the work of the bureau from that which has heretofore prevailed in practice.

"We feel that the work of the Bureau of Corporations, with its broad powers of inquiry, should be extended out from the field of sporadic and particular investigations into this or that industry or subject, important—indeed, vital—as some of these have been in the past. It seems to us that there lies a power for usefulness in this branch of our department which has been hitherto quite unused, and which may go deep into the foundations of things which lie beneath our whole industrial structure. Just, for example, as in our Bureau of Standards we are investigating the physical and chemical and electrical laws which underlie our industries so that we may be guided by those laws in our production and may establish standards in conformity with those laws which shall measure our methods, so in connection with the Bureau of Corporations we feel that there are certain economic laws even more potent than statute laws which may be and, if possible, should be brought to light for our guidance.

"One of these studies which has received the approval of the President, and which, if funds are provided, we hope to undertake, is the question whether the 'trust' form of organization is economically efficient; whether, to state it differently, the combination of numerous factories that have hitherto operated under separate managements into a single consolidated whole under one management does necessarily provide that efficiency which is said to be the reason for such conglomerations. Is there not a law of maximum production at minimum cost beyond which point to force production under any given circumstances means an increase in cost? Are there not factors in management and methods which perhaps have been overlooked in the formation of these great organizations? Leaving out of account those with whom the law has dealt, many of them have not been distinguished by their financial success. Some of them have ceased to exist. Perhaps those that have achieved wealth by purely industrial processes are the few rather than the many. It has been said, and truly, that large capital is necessary and large production essential to low cost; that the possession of great masses of money makes possible scientific inquiry and refined methods and outlay upon promotion and research not possible to the small business. This is, of course, true so far. How far is part of the question to be determined? There are thousands of men who can be corporals in an army; perhaps not quite so many who can be sergeants, but still very many. There are a good many less who can be captains of the companies, and the proportion of majors is fewer, and of colonels less. More rare are the successful generals of brigades; still rarer those who can control an army corps, and the masters of great armies are not at all easy to find.

"The supreme masters of great forces in the world's history can almost be counted on your fingers. There are those who think this thing is true of great industries. One of the most acute lawyers connected closely with our greatest enterprises said to me that the trusts carried in them the seeds of their own decay, because it was not possible continuously to find men competent to manage well such mighty movements.

"We purpose, if we are permitted, to study this whole problem, to see what its fundamental laws are; to learn what the new factors are, if any, which come into play when production passes a certain point and great numbers of men are massed under one leadership. Here are elements of waste to be considered; here are elements of supervision to be noted; here is the question of purchasing, as affected by other matters than mere mass or volume; here is the whole human side to be thought out; and there are wise men and experienced who begin to feel that the popular sense of dread of the great overshadowing trust is perhaps only the instinctive expression of an economic law, felt rather than understood, that these aggregations are economically unsound as well as socially dangerous. Here again we can only plan. Congress must provide, and if it shall provide we shall try to undertake the inquiry."

SUMMARY OF ADDRESS BY HON. WILLIAM C. REDFIELD, BEFORE THE BOARD OF COMMERCE, FLINT, MICH., OCTOBER 22, 1913.

Mr. Redfield spoke of the scope of the department as including the heavens above, the earth below, and the waters beneath, giving, as examples of this, the Radio Telegraph Service, the Coast and Geodetic Survey, and the Bureau of Fisheries. Its extent he characterizes as world-wide, with active agents in the Philippines, Hawaii, Alaska, and Porto Rico, while its commercial emissaries were in every continent. An inspector has just left to study cotton conditions in eastern Asia, and a student of banking and commercial credits will shortly start for South America to develop inquiries along those lines. Studies in the by-products of coke are going on in Europe, and these are but illustrations of a service which encompasses the whole world. Speaking of the difficulties under which some of this work was done, he instanced the fact that four fishery inspectors were supposed to cover many thousands of miles of coast in Alaska. This they were expected to do, although there was no regular passenger service on most of the coast and no boats or other means of transit were provided for the inspectors. This had been brought to the attention of Congress, and it was hoped and believed that the service would no longer be left in a condition where dependence for the facilities of inspection must be placed upon the personal favor of those whom it is supposed to inspect.

In discussing the work of the Coast and Geodetic Survey, Mr. Redfield pointed out how essential it was that this important service should be provided with the most modern apparatus in order that it might complete an accurate survey of much of the Alaskan shores, where commerce is so rapidly growing and where neither force nor equipment had been provided in sufficient quantity to make commerce wholly safe. As an illustration, he instanced the wreck in August last of the steamship *State of California*, which ran upon an uncharted rock in Gambier Bay, Alaska, and sank in a few minutes, carrying many persons and a valuable cargo to the bottom. This was really a needless waste of human life. It has long been known that pinnacle rocks, such as caused this wreck, are not easily found by the ordinary sounding lead line; but a device—a wire drag—is now in use which will infallibly detect them. This device is used upon the Atlantic, but none has been provided for the Pacific, and in Alaska it is especially needed because of the peculiar formation of the sea bottom there. It is earnestly hoped that Congress will provide at the next session at least two sets of this apparatus and a sufficiently increased force of men to

permit a thorough survey in the most modern fashion of the entire Alaskan coast without unnecessary delay.

There are two very different lines of the department's activity in which I think you may be interested. One because it has been very widely discussed and made the subject of general comment; the other because it bears a very direct relation to every dweller in an important city, although it has hardly been before mentioned in public discussion.

When it was suggested some months ago that the inquiry powers of the department might under certain conditions be used to learn whether conditions in any general industry were such as to justify a reduction of wages when alleged to be made because of tariff changes there appeared very general comments on the alleged action, which comments were chiefly remarkable for their vigor in dealing with an assumed state of facts that did not exist. An attitude of courteous candor which was not for a moment misunderstood by the gentlemen who were directly concerned was so altered in the telling of it as to put the department in the position of menacing individuals and establishments with hostile intrusion if excuse could be found for so doing.

When the direful results which prophets of evil foretold did not occur the facile imaginations of some editors led them to say that the Secretary of Commerce had withdrawn from his attitude. The Secretary of Commerce has done no such thing. He accepts no responsibility for the vagarious remarks they would have had him say and which they would like to criticize. The views expressed in the address, because of which all the dust arose, have not been changed, and the action that was suggested in that address will be taken if the circumstances suggested therein should arise and seem to make it necessary. Meanwhile the department will not be "bluffed" by those who wish it to err into action which would have for the sole basis of its existence the hope of some that it might make a mistake. It is, however, extremely interesting to note how threats of reducing wages because of tariff changes have been few of late. It reminds me of those fine lines from an old Irish song of the Civil War, which run:

Speechless silence all around
Is every sound I hear.

The fact that powers exist in hands that will use them if, and only if, general and sufficient cause shall appear for such use, and will then use them conservatively and considerately, if at all, seems to have had a sobering effect upon those who would make the wages of the laborer a fulcrum on which to poise their political arguments. Meanwhile an inquiry under these powers has gone steadily on into conditions in the pottery industry. The domestic field work will take perhaps two months longer, and it is soon expected to begin the European side of the field work. All sorts of yarns have been printed about this inquiry. It was intended to affect the tariff bill, which was not true. It was a sign of fear lest a mistake was made, which was not true, either. It was an attempt to coerce, which was still less true. It was all sorts of things except the thing it was, namely, a thoughtful, patient, painstaking inquiry into the truth, with a desire to help everybody and hurt nobody, for truth does harm only to the evildoer. Candid men of all political faiths are not afraid of truth, least of all good business men, and those who have gone from our department into the field into this inquiry have met a considerate, courteous, and frank spirit of good will. There are not wanting those who have frankly thanked us for what they are kind enough to call an effort to be of service to them. What the report will be as a result of this inquiry I do not know. It will be impartial, for many different views have been represented among the inspectors. It will be clear and candid and will not have for its purpose any effort to influence legislation one way or another. Our belief is that it will be helpful all around, and certainly the intention to have it so is very deep within our purposes.

It is possible that other inquiries of a similar kind may be taken up hereafter. If so, it will be done in the spirit that respects and welcomes all truth and which will try with a proper catholicity to serve the industries themselves, the people who are employed in them, and the people who buy from them.

Another line of inquiry of a very different kind is proposed for which in our estimates for the coming fiscal year the sum of $100,000 has been included. Let me quote the exact language of our application for certain funds that are asked on behalf of the Bureau of Standards of our department. They are wanted "for an investigation of the standards and methods of measurements and for determination of the quality and cost of service required in the regulation by States and cities of public utilities, being such as the electric light and power companies, city and interurban railway companies, telephone companies, gas companies, water companies, and every public-utility company, and for furnishing technical data and expert advice to State and city officials upon request in connection with the regulation or operation of public utilities, or of the fulfillment of municipal contracts for street lighting, water, gas, or electric power, etc."

This fund would be used to enable the Bureau of Standards to carry on such investigations as would fix standards of service for public-utility companies that would assist the public-service commissioners of the States and cities and other authorities in regulation and control of these utilities. There is no hint here of the Government infringing upon the authority of any State or city when through its Bureau of Standards it proposes to cooperate with and assist State commissions in their technical work. There is no suggestion or idea that in this connection the Bureau of Standards would exercise any legal authority whatever; no more so than it does in its other scientific standardizing work.

There is, however, a wide field for the activities of this scientific bureau in carrying on and publishing investigations of a purely technical character for the purpose of establishing standards and methods that may be adopted generally by State and municipal commissions. Uniformity of process and of requirement is greatly needed, and without some coordinating agency which is impartial and disinterested it is hard, if not impracticable, to secure such uniformity. Two parties, one a city or a State, the other a public-service company, may disagree. Who is to be the arbitrator? You say the court, but the question is a technical one, and upon what standard of technical knowledge and inquiry will the court base its action?

In drawing specifications and stating requirements to which a utility company is expected to be held it is essential that there should be some definite standard not determined by an arbitrary flat of one engineer or anyone interested, but based upon laws learned by study and upon the impartial activities of a body which has no possible connection with the particular case, but is charged instead with the sole duty of determining the precise facts and passing upon these standard requirements. The Bureau of Standards can not formulate satisfactory rules that would be accepted as standards without consulting with the public-service commissioners and with utility companies all over the land, in order to become familiar with the conditions and requirements in different sections and to ascertain the views of the various parties interested.

A considerable force of people and experienced engineers and experts will be required and funds will be necessary for them to travel and to make their scientific inquiries. The cost, because of the splendid equipment and organization that the Bureau of Standards has already, will be far less than if each State or city were to attempt to do this work. That would mean creating for that purpose in each State or city a costly plant, which would duplicate that now in use by us.

It is of the greatest importance that all State and municipal commissions should possess full technical information in regard to utilities which they are required to regulate in order that they may act intelligently and justly as between utilities companies and the public. If the public is to have a square deal, there must be just as good information in the hands of the public-service commissions as there is in the hands of the public-service companies. The latter can and do pay high prices for the best-trained minds. The public-service commissions frequently are unable to do this, yet these latter are charged with regulating the former, and unless they are as well informed that regulation will be more apparent than real.

It was found, for example, in one city that gas was being furnished far below the legal requirements merely because the best technical information had not been available to the public authorities. Serious errors in another case have been made in drawing requirements for street railways merely because the public authorities had not the knowledge at hand requisite for the purposes.

In two important cities to-day officers of the Bureau of Standards are being consulted by the municipal authorities determining the precise facts on which a firm and fair regulation shall be based. The public-service commissions of at least six States and many cities have asked this cooperation.

The subject is one of importance which opens to thought the more it is studied the vision of great possibilities which, indeed, in their results will affect the daily life of the humblest man, but whose inception is based upon the most profound scientific study and upon the use of the best technical apparatus.

I wonder, as I think of this great work, if some sapient mind with versatile powers will arise to say something about our intruding somewhere, or something as to grasping at the affairs of States and cities. If such there be, their mental case is hopeless. It is useless to attempt to standardize such minds.

Nothing can measure their movements or weigh what it is that passes with them as intellectual process.

Lest in the midst of this technical subject the fact is not clear in your minds, let me say again that these inquiries into the fundamental laws which underlie all the work of serving you by public-utilities companies will be so carried on that their results will be available on request of those who need them and not in the least because it is intended or will be permitted that they shall replace or modify any of the normal functions of State or municipal bodies. Mention of this single branch of the work of the great Bureau of Standards reminds us that they are also studying certain other matters which affect all of us directly; for example, into the causes of broken rails and of broken wheels and car axles. I need not tell you that from these three kinds of accidents much damage is wrought to property and many lives have been lost. The Interstate Commerce Commission has welcomed the cooperation of the Bureau of Standards of our department in studying patiently into the fundamental reasons that underlie these failures, in order that when the causes are once learned we may lay down standard methods whereby we can avoid this loss hereafter.

A SUMMARY OF THE REMARKS OF HON. WILLIAM C. REDFIELD, SECRETARY OF COMMERCE, BEFORE THE LANSING BOARD OF COMMERCE, OCTOBER 23, 1913.

After speaking of the general work of the Department of Commerce, with its 8,000 men, engaged in many different lines of activity all over the world, of which number but 1,500 are employed in Washington, the Secretary went rather more into detail respecting the urgent and important work of protecting the coast of Alaska, which duty is charged upon the Coast and Geodetic Survey, which is one of the bureaus of the Department of Commerce. Mr. Redfield said:

"The recent sad accidents on the Alaskan coast, particularly that to the *State of California*, which in last August sank in a very few minutes after striking an unknown rock, carrying to the bottom most of her passengers and crew, have enforced the necessity for protecting these dangerous coasts as fully and rapidly as possible. The task is no easy one, for there are many thousand miles of dangerous coast to be watched, with numerous inlets and islands, and a large force is needed, and a good deal of money, in order to make them as safe as they ought to be. Yet, until such safety is secured the commercial development of Alaska can not reach its normal height, for we have no means of reaching that great territory save by water, and can never have any means of reaching it directly from our own shores except by sea. The problem is not only that of surveying the enormous coast line and of sounding the bottom of the sea and preparing the necessary charts for navigators, but it is also that of establishing and maintaining the lights and other aids to navigation which are requisite for security. Already six vessels are employed by the Coast Survey in this service and two by the Lighthouse Bureau. The former will ask for six additional ships, in the estimates which have just been prepared, and the Lighthouse Service is asking for one large steamer to provide transportation facilities for its supplies, as well as doing necessary tender work in heavy weather.

"A part of this Alaska problem is the caring for the seal herds on the Pribilof Islands in the Bering Sea. The present law provides for a closed season of five years, during which only such seals shall be killed as are necessary to provide meat for the islanders. This number is limited to 3,000 per year. A census of the herd taken this last summer shows that the first year of the closed season has resulted in a fair increase of the number of seals, and it seems reasonably certain that the result of the full closed period will be a restoration of this invaluable asset to a position where it may be drawn upon from year to year in moderation while still permitting its steady growth.

"In this connection a new departure has been made in having the skins sold in the fur market in St. Louis instead of, as heretofore, in London. The auction of the skins for Government account will take place in December, and the department is awaiting the result of the experiment with much interest.

"Another very different line of the department's activity is an inquiry that will be made, if funds are provided, into the question of the fixing of retail prices by manufacturers. The Supreme Court has decided that such fixing of prices is now unlawful, and there is of course no thought, much less purpose, of in any way questioning the decision. It is the law of the land, and as such bound in letter and spirit to be accepted and obeyed. For the guidance, however, of future legislation on this important subject, it is desirable that the economic question be worked out. Is it or is it not the fact that when competitive conditions exist the fixing of retail prices by a manufacturer tends to monopoly? If, for example, a patent jew's-harp is sold at $5, the price being fixed at that figure by the manufacturer, does the fact that the price on that article is so fixed act to cause monopoly so long as conditions exist which permit other patent jew's-harps to be sold at the same or differing prices? As a matter of fact, is it or is it not a temptation to a man who can make a good jew's-harp which he can sell at $4 to proceed to do so and does it, or does it not tempt another man who can make a jew's-harp which he can sell for $1 to try to make it for that figure?

"The question is a practical one, not to be determined by surmise or upon the hasty jumping at conclusions from any single circumstance. There is doubtless much to be said on both sides, and the matter is too complex to be solved at a glance. The decision of the Supreme Court settles the present law, but the wisdom or unwisdom of a new law and the economic profit or loss of the practice are not yet settled. There are men who are sincere foes of monopoly who incline to the belief that under economic laws, which are greater than any statutes, the broad prohibition of the right to fix retail prices by the manufacturer tends itself to create monopoly instead of being a movement toward relief from such monopoly.

"The subject is one that concerns us all. There is no one here that has not in his possession some patented article which is affected by this ruling. Our retail stores abound with them. A very keen feeling exists among the manufacturers of such articles, and unless I am incorrectly informed, there has been a very keen competition among such manufacturers in many lines. We deem it well, therefore, that the Bureau of Corporations should devote some time and money during the coming years to a careful study into this important business problem."

SUMMARY OF REMARKS OF HON. WILLIAM C. REDFIELD, SECRETARY OF COMMERCE, BEFORE THE COMMERCIAL CLUB OF OMAHA, OCTOBER 28, 1913.

After briefly describing the work of the Department of Commerce, which he said covered the realms of the air, the earth, and the water, through the Radio Service, the Coast and Geodetic Survey, and the Bureau of Fisheries, Mr. Redfield said:

"The attitude of the Department of Commerce toward the business world of to-day may be defined in two words. It is an affirmation and an inquiry. It has undertaken, subject to the approval of Congress and based upon funds which Congress will be asked to appropriate, to carry out these two ideas, the affirmation and the inquiry into fact. It bases its affirmative policy on a strong belief in the character and quality of American business men and in the efficiency of American labor and of American organization. The department knows very well that many of our industries are not efficient, that some capital is held back from its legitimate fruitage because of its own fears and by lack of confidence in its own power to compete in the world's markets. It is recognized that in some places labor may still not fully realize that its richest reward lies in the largest possible output when due and searching regard is paid to such hours and such speed as will not overstrain or poison through fatigue. We know that much of our industrial movement is still hampered by inefficiency, not the less real because it is unconscious. Nevertheless, though these things are true, we do believe strongly and increasingly in the power of our American industries, when they shall have surely found themselves, to compete with the industries of any country in the world while fully maintaining on the one hand the American standard of wages and on the other hand reducing the cost of production. The gospel in which I believe, then, is an affirmative one, a gospel of courage and of hope, not a rash or hasty self-confidence, but a fearlessness based upon a calm estimate of our own power, and which takes all the facts, not merely a part of them, into account.

"Based on this belief, the Department of Commerce wishes to initiate a new step toward the expansion of American business abroad. It desires to place in each of 14 great capitals a commercial attaché, accredited to our legation there but under the charge of the Department of Commerce. This officer will have for his sole duty the study of commerce and industries of the country in which he resides and will be expected to collaborate with the consuls in the various local centers in that country in so doing. The great industrial nations in Europe maintain such forces and have them here among us, but we have never had sufficient confidence in ourselves to establish such an organization. The duties of the consul under the prospective plan will remain unchanged save that he is expected to report on commercial subjects direct to the Department of Commerce. We then propose to enlarge a force already existing on a small scale, called commercial agents. These are men who take a single subject and study it in various countries under all its aspects. There are a few of these now, somewhere from 12 to 16 men. We hope to double this force. The proposed organization would then consist of three parts:

"1. The general view of a country's commerce and industry represented by the commercial attaché located at its capital.

"2. The particular or local view of the country's interest in commerce taken by the consuls.

"The above two will work in cooperation.

"3. The special view of definite subjects through the commercial agents, who will travel from land to land in pursuit of their particular object.

"The results of all these three cooperating forces will be made public through the daily publication of the Bureau of Foreign and Domestic Commerce and through special reports. It is, however, expected that the commercial agents on their return home from their special trips will travel through this country at the request of boards of commerce and commercial clubs to explain to them, face to face, what they have seen and learned abroad, and that the commercial attachés when given leaves of absence shall likewise be free to place before representative bodies of business men the facts respecting the countries in which they have resided. By these several means it is hoped to put the entire industrial world in our country in position to get accurate and first-hand information concerning the industries and commerce of other lands.

"That this is no mere dream is evident from the fact that we are to-day exporting our manufactures to the extent of $1,500,000,000 in value yearly. This is a vast sum, and places us third in rank of the nations which export manufactures, England and Germany alone exceeding us. But it is perhaps even more remarkable that this foreign trade in manufactures is expanding very rapidly. Each successful month marks an advance. It grew through the fiscal year ending June 30 at the average rate of $500,000 a working day, and since July 1 has maintained or even increased that growth. We deal, then, not with a fancy or with a hope which we wish to come true but with an established fact.

"On its inquiry side the department hopes Congress will furnish funds to take up three matters of importance:

"1. An inquiry into the laws of production underlying our trust problem.

"2. An inquiry into the maintaining of fixed prices.

"3. An inquiry into the technical facts underlying the work of public-service corporations.

"First among these is the inquiry now proposed as to whether the trust form of organization is necessarily and in its essence industrially efficient. It is clearly recognized that large capital is essential to the cheapest production, and that this mass of capital permits research and other industrial developments that are requisite to producing at low cost and which otherwise could not be had without it. In other words, the massing of capital and of labor has undoubtedly points of great economic advantage. The question is whether these have not also their economic limits; whether there is not a law of maximum production at minimum cost beyond which lies a realm in which, if production is pushed too far, cost increases. The department does not dogmatize upon this matter. It looks at it as a subject of inquiry. There is some reason to believe that the aggregations of capital in industry have in some instances been pushed further than is economically sound, and that the gains to be made from such aggregations are more superficial and temporary than essential and permanent. The history of our trusts shows that they are far from having been universally successful. And the briefest glance at our industries also shows that many concerns of relatively small size are quite as successful, or more so, than those great aggregations which fill the public eye. Does or does not efficiency depend on bulk? That is the question which it is very important to answer. Do bigness and economy go necessarily together? It would seem apparent that if this matter can be worked out patiently and thoroughly—it can not be done in two or three months—so that the underlying laws of production can be made clear, we may come to a normal and natural settlement of the trust problem. I myself am inclined to think that in its extreme forms the so-called trust is a passing industrial phase.

"Secondly, since the Supreme Court has decided that the fixing of prices is unlawful, it is not our desire or purpose to question existing law. So far as I know, however, the economic law concerning the fixing of retail prices has never had thoughtful study. If there is ever to be new legislation on this subject, it ought to be based on accurate knowledge. Indeed, I hope it may be clear that what we are trying in the Department of Commerce to do is to substitute thorough knowledge for uninformed attempts at prevention or cure. Supposing—and always supposing—competitive conditions to exist, does the fixing of retail prices by manufacturers mean monopoly or tend strongly to it? Some of those most strongly hostile to monopoly in all its forms think it does not so tend. I express no opinion, but I think we ought to find out. Some have said that the present condition whereby prices can not be fixed is one which in its very nature tends most strongly toward monopoly, in that the survivor in what may become 'cutthroat' competition might have the field left practically to himself. It is remembered also that in countries abroad the maintaining of fixed retail prices is welcomed by the law. The only point I now make is that we would like to find out what is right and what is wrong on this subject, rather than have our legislation deal unjustly with it through a belief, however sincere, which may not be founded upon accurate knowledge.

"We believe it to be essential that the public-service commissions of State and city should have at their disposal at least as thorough information as is in the possession of the public-service companies they must regulate. This is not so to-day. The corporate servants of our municipalities and States can and do employ the best legal and technical talent, and in both respects those who would regulate are at a disadvantage with those whom they must regulate. Through the laboratories, therefore, of the Bureau of Standards we purpose to inquire, if funds are granted by Congress, into the underlying facts beneath our public utilities—facts as to gas, as to electrolysis, and other similar matters. Already six States and many cities have called upon the Bureau of Standards for this advice. The knowledge can not be had by each city or State for itself, since that would involve the establishment of independent laboratories at great cost for construction and maintenance, and when these were done the results would not be binding in one State as regards another. The results of an inquiry by the Bureau of Standards, however, are of accepted value, not only throughout this land but abroad. Furthermore, the Bureau of Standards is free from political, financial, or local bias. It seeks only the truth. No element of profit enters into their studies. Again, it seeks this truth solely for public uses and puts it at the service of all. The greatest public-service corporation and the smallest city, or even the individual engineer officer of any city, can have full access to the truth."

SUMMARY OF ADDRESS OF HON. WILLIAM C. REDFIELD, SECRETARY OF COMMERCE, BEFORE THE COMMERCIAL CLUB OF ST. LOUIS, NOVEMBER 1, 1913, ON THE IDEALS OF COMMERCE.

I am led to add to the remarks I expected to make by seeing in your local press extracts from the recent address of the Commissioner of Corporations on the subject of the intended future policy of that bureau. I feel it to be very important that the business men of the country should understand the purpose of certain work we are about to undertake, with the approval of the President, provided always that Congress supplies the necessary funds. I need not tell this audience what has been done by law and through the courts in dealing with the so-called trust problem. It seems to me, however, that the fundamental factor underlying the whole subject of big business and of the trusts has been largely lost to sight. We propose, if Congress permits, to undertake an inquiry into the fundamental economic laws which underlie the vast masses of capital and labor, with which we are becoming familiar in our industries, and control them, and which are more powerful and certain in their action than any statute law can be.

Is or is not the trust form of organization industrially efficient? Are there or are there not factors which come into play when production passes a certain point which increase rather than diminish cost? Is there, in other words, a law of maximum production at minimum cost, beyond which point of maximum production cost rises? Is the trust problem in its economic essence a passing phase? Some years ago one of the leading lawyers of New York said to me that the trust problem carried in it the seeds of its own decay because men could not always be found able to continuously manage such great masses of capital and labor. If we may take an analogy from the armies of war, it will be found that while subordinate officers are numerous and readily and easily obtained, great commanders are few, and you can count on your fingers those who have made conspicuous successes in the handling of the greatest of armies. If we look at the field of our greatest industries, we shall find certain facts to make us reflect. Some of the trusts have ceased to exist. The Wall Paper Trust is one, the Cordage Trust is another, and there are others. Many of the so-called trusts are not especially profitable, failing to earn dividends or earning but small dividends upon their common stock. It is the few among them that have been conspicuous financial successes, not the average or the many; leaving out of account altogether those with whom the law has dealt, it would not seem from a superficial glance at the record that this particular type of organization had justified itself commercially. Of course, it is

true that large capital does permit expenditures for research, apparatus, and equipment which could not otherwise be had, and that it permits the employment of experts who without great means could not be secured. Yet it is also true that side by side with the great aggregations of capital have gone on smaller and independent concerns in the same lines of business who have made, in some instances, conspicuous successes. You have only to look at the steel industry and the typewriter industry to find examples, and there are a great many more. Indeed, I think it may be found to be a fact that some of the independent concerns are more profitable than are the larger ones that bulk so greatly in the public eye. What are the economic laws that lie beneath this movement? This is what we want to learn. If it shall appear by searching and conservative inquiry that the public dread of these aggregations is but the unconscious outcome of an economic law which itself fails to justify them, then the matter will be finally settled, for men will no longer continue that which is proven economically unsound. I do not dogmatize upon the question. On the contrary, my statement is that the answer to it is as yet unknown. There are wise and experienced men who think differently on it, but certainly it is true that we ought not to go further in our legislative and executive life without learning as thoroughly as we may what the fundamental truth is.

To many a foreign observer an American city like yours must have a peculiar interest. I do not mean so much in its extent, or in the actual wealth accumulated, in its public works, its private buildings, or even in its population, as in the mature and established character of all that appears. The European or Asiatic visitor has usually behind him an historic background of centuries, the results of which are naturally compared in his thought with what we have done in our decades. Many of the great cities which he knows run back even into Roman days. Some of them were capitals long before the New World was found. There are, of course, such exceptions as Berlin and St. Petersburg; but even these cities are centers of powers that were strong before the United States was born, so that there also certain traditions of age exist. Coming from such a background into America, and into what, compared with the Atlantic seaboard, is in a sense a younger part of America, it does often surprise a foreign observer to find you all "grown up." The city of St. Louis as a municipal organization is but little over 90 years old. It is but a hundred and five years since it was incorporated as a town. These are short periods in the lives of great capitals. And yet how complete and how grown up you are.

It was five years after you became a city that my grandfather prepared a map, which I have, outlining a great railway which should reach from New York to the Mississippi River. And when he did this, most men who knew it derided him and called him a visionary. I have in my office an advertisement of a steamboat company which came into existence in 1825, two years after St. Louis, as a city, was born, in which, it was said, that in order to avoid the dangers incident to travel on steamboats a safety barge would be towed behind the steamer. In this barge the passengers traveled in security from the frequent explosions which ornamented the marine records of the time. It was a good while thereafter that, as I am told, an officer of the Pennsylvania Railroad was kicked uphill because, in saying that the net earnings of that company might, he thought, within five years more rise to the extreme total of $8,000,000 in a year, he was thought to have so lost his balance of judgment as to be unsafe in the practical office that he had formerly held. My father remembered the wooden bridge by which Broadway crossed Canal Street, in New York, and my uncle recalled living on the east side of Manhattan Island and looking, as a boy, across the East River to the wooden blockhouse that stood where now are the towers of the Williamsburg Bridge.

So we and our fathers have rather quickly done a vast work, and it looks so solid and so substantial that we often forget that we are a child yet, as nations go. It is to be hoped the span of our national life and growth will be so long as to put us now in what, reckoned by years at least, is but our infancy.

What made this growth? What has been behind it all? In the first place, men had certain ideas about things which they could not develop as well as they wished to do in their old homes. Some had an idea about religion which they wanted to work out, and they came over to New England to try to do so. Some had certain ideas of profit, and came over here to see what they could do in that direction, and others were under stress from poverty, which they thought they could avoid in the New World. After a time there came an idea of self-dependence and of mutual interest, which led to independence and then the working out of our own ideas in National and State and municipal matters. There was at first the struggle for bread and clothing in a strange land, and from that came the infant development of industry, and as another step the establishment of freedom of trade and exchange over the greatest area of that kind in the world; and again the idea that we might feed the nations with our surplus food, and for long we did so; and then, slowly and much later, the idea that we might sell to the other peoples things we made which they want, and we have begun this. And the idea is expanding, until now we are not only the greatest producers in the world of many things that men need in other lands, but, youngest of the nations, we are first in domestic trade and third in international commerce. To-day we ship abroad into the open arena of the world's commerce an average of $5,000,000 worth daily of our manufactured goods. The wealth and products of 48 States flow freely through the arteries of our domestic trade, and the manufactures of our united nationality are a potent factor in the world's commercial centers.

Along with this growth in material things has continued the evolution of ideas of which we have briefly spoken. There are thoughts abroad in the land which have not always been here. The time in which the getting of profits was the supreme ideal has been succeeded by a time in which the giving of service is thought to be the true ideal. You have seen, for example, the springing into life of commissions which say to our great public-service companies, "Thus far shalt thou go and no farther," which tell them plainly that both their existence and their profit depend upon serving well the public from whom they derive their powers; which tell them, indeed, that this ideal of service goes so far that they must take the lean with the fat, and may not make the ideal of profit a controlling factor in every detail of their respective enterprises. The voice of the public is heard in every great city and in most of our States and in the Capital of the Nation saying to the great aggregations of capital and labor known as public-service corporations: "You must be what your name implies—public-service companies—and the service you render must be first to the public and secondarily to yourselves, and the serving of the public well and safely and on an improving scale is of greater importance than the increase of profits, and must be given as the very basis of any profit." Indeed, the public thought now clearly is that these companies have no basis for existence save as they are true servants of the public. Many men urge that this kind of work is so essentially public service that the public alone should do it free from all private interest.

It is interesting to note how practical a fact this feeling in the public mind is. I have heard of a great public-service company whose idea seemed for years to be to give as little as it could for the most return, to avoid every obligation from which it could possibly be excused, and to retain skillful counsel to minimize its obligations to the people from whom its charter came. It became substantially derelict in many if not most of the duties it owed to the people, from serving whom it alone derived its existence. Public wrath grew against that company until there were none so poor to do it reverence; and this feeling made itself felt in many serious ways. The company's treasury suffered and juries reflected the just popular indignation. As years went on a normal reaction from this low estate brought into power men of larger views and broader conceptions of public service. Methods were changed. Effort was made to provide the most for the people in quality and quantity first; to originate forms of service, even, rather than resist them. As the new spirit became known the public temper changed, and the company began to prosper. The new spirit grew; earnings grew with it, until now the bitterness is gone and peace and prosperity reign. Here was a new ideal, and a new life came with it. I know an apartment hotel whose manager seems to have the odd notion that he is the servant of his tenants. Many a close-fisted landlord might envy his success.

There are many more of these ideals afloat. One of them says that so to manage a business for profit's sake as to injure the men and the women employed by it is to destroy the most valuable possession we have, and that an enterprise so run is a public wrong, not to be long permitted. Hence this ideal says hours shall be shortened, and perhaps even a minimum wage shall be paid; for it is just as true to-day as it was in Canaan of old, that the Lord saith, "Thou shalt not muzzle the ox which treadeth out the corn." Nervous exhaustion and brain fag are not confined to so-called "high society." Fatigue is no respecter of persons. Disease knows little of social or economic distinctions. Pain is entirely democratic in its scope.

Few men will deny that the ideals of one time form the practice of the next, and that our whole history, whether on the commercial, the material, or the political side, has been the gradual working out into fact of the ideals of the days before. It was a great ideal that there is no property right in man; and slavery fell before it. It was a great ideal that the spoils system is morally wrong and politically unsound; and no party could exist that avowed that system as its own, for the public wrath would crush it. An ideal greatly needed in the public criticism of to-day is that it shall be based upon unperverted and accurate statements of fact.

What, then, are the ideals of to-day in commerce? For if we can find them, we may with reasonable security say that they will form the practice of our successors in commerce.

There was an old commercial ideal wrought into law, which law still has a measure of respect from its antiquity, though hardly from its respectability. This ideal was centered in the old law-Latin phrase caveat emptor, which, being interpreted, is "Let the buyer look out." Look at this commercial ideal a little and see how disreputable it has become. Apply it to food and straightway rises up the public conscience in the shape of a pure-food law and says, "Thou shalt not." Apply it to patent medicines and brave publications rise up to denounce those who sell what may deceive or injure. There is coming into being a new law of fair trade, which begins rather plainly to say that the seller has grave responsibilities, and that it is his business to watch out lest he deceive the buyer. We are beginning to substitute another business practice that might almost be called the rule of "caveat vendor." There is a growing conception of honor in such matters; men will carefully buy of houses whose name they think is a trustworthy guaranty of quality. Once the representative of a great manufacturer said to me, "Any goods that bear our firm name are all right." But he sold lots of goods on which the firm name was not put. There was an ideal half baked reminding one of the man who said he had his principles but did not always carry them with him. There are lines of business now in which it is honorably recognized that the seller must be supremely careful lest he be condemned. Among such take, for example, the exceptional care and skill put into the selection of materials for and the design and the manufacture of a modern automobile. When you look at our entire commercial field it is surprising to see how far the old doctrine of caveat emptor, however much it may survive in discussions of law, has fallen into the background of our commercial life, and the seller is beginning to recognize that a large part of the responsibility rests with him. A rising and increasingly definite social consciousness says to manufacturers, "Thou shalt not deceive, whether by name or by label or appearance or composition or advertisement. We, the buyers, mean that you at the source shall look out for us."

See how far this idea will go naturally into definite practice among yourselves to-morrow. Your wife will buy for your table the product of the manufacturer whom she believes recognizes the principle that the seller must take care. You yourself will buy your clothing from the tailor whom you believe puts the most honor into his work; who, in short, serves you best. You will deal with the physician who puts the most and not the least of himself into his professional work. The lawyer will hold and control the best practice longest who gives the most in value and service for what he gets; and the man, whether he be physician or lawyer or minister in professional life, who does not feel that as a seller of his services it is his privilege to give the most he can will have short shrift among you. One great product has standing among us, because being called "the best" it is so esteemed to be. That producer has felt the responsibility on the seller. Advantage is taken by sellers, both rightly and wrongly, of this thought. Men of broad vision, who grasp the truth, put their conscience into their goods knowing it pays. Men of narrow vision will try to persuade over the bargain counter that they are serving the consumer by giving him a dollar's worth for 50 cents.

There is another ideal coming into life and power, slowly but surely. If it were incarnate here in St. Louis, it would say to you: "These massive buildings, these great banks, these beautiful homes, these instrumentalities of culture and of wealth, these libraries, these factories—these are not St. Louis. These are but the outward expression, in brick and stone, of a portion of St. Louis. The real city is the men and the women and the children who live there, and of that real city the poor and the humble are as truly a part as—sometimes more truly a part than—the cultured and the well-to-do." The ideal of which I am thinking would say, were it incarnate: "The pride of a city does not lie in its public buildings and its great institutions, but in its humble homes." If behind the outward pomp and power are alleys of filth and dark rooms of misery, this ideal says the pomp and power are but shams; that we have an ill-balanced thing, not a rounded human entity, but an abnormality, with wealth and comfort on one side and for some, and with pain and poverty on the other side and for many. Men get hold of this ideal that the greatness of a city or State lies in the peace and happiness of all its people, not of a part of them. Men get hold, I say, of this ideal and distort it in all sorts of ways and get violent about it, forgetting that any evolution up to an ideal means time and growth and patience; that we must advance step by step; that all the combined wisdom of a city and its wealth, too, together, could not and should not attempt to do away with poverty and misery and sin at a single blow. One of our ideals must be patience as well as persistence.

How does the matter of which I am speaking affect commerce? About this way: That it is doubtful how long it will be respectable to have large dividends and low wages go on together; that it is uncertain how soon public opinion will say that a wage for working women in a shop or in a factory which is insufficient to maintain them in decency shall go on side by side with a costly home for the owner of that business, and perhaps even with gifts on his part to charities and education. I say it is uncertain as to when these things will take place, for in my mind it is not uncertain as to whether they will take place. For the ideal that men can rightly profit out of conditions under which their fellows wrongly live will not last. It has already begun to fade. In its place comes another; it comes slowly, but it is coming; and this newcomer among the ideals says that it does not pay any longer either to let the buyer do the looking out for himself wholly, or to let the laborer shift for himself in poverty wholly, or to try to extract from human endurance the utmost that fatigue can give, or even to go about indifferently and talk sagely about the market rate of wages and normal living conditions for the uneducated. No; there is an ideal which says that it pays in money to so manage that the worker in the mill and in the shop shall have enough recompense to enable him or her to live in decency. This ideal, I repeat, says it pays, and men in some places are beginning to find it out in practice. This ideal says, too, that no economic law can be right which works moral wrongs; that there are not two sides of truth—one good truth and one bad one—but that all truth is good and all truth is the same, and there is not one kind of truth for the employer and another kind of truth for the worker. This ideal would shrewdly inquire whether the losses in industry, seen and unseen, from doing what is called "hard-headed business" at the market rate, might not have been profitably saved by a little more thought of the common facts of human life and a little less interest in the additions of the pay roll.

This same ideal some day will stand at the elbow of a man and say to him: "You are selling goods in Europe against the competition of Europe, though your employees get more pay and live better than they do over yonder. Why not carry it a step further—try to see how well you can let your workmen live, and your workwomen; how far you can carry the idea of cultivating them? Perhaps you will find a responsiveness that will surprise you. They are not dull and inert material; they are not even like lathes or planers, that get their power from without. They are self-animated. Perhaps if they work themselves willingly, rather than by force of poverty or need, there might be something there that would be useful both to you and them. Why not try?"

So, gentlemen of the Commercial Club, I see, or think I see, in the unrest of the day, even in the cruder and baser forms of that unrest, the cropping out, often in rough shape, of new commercial ideals, which the wise heed and the foolish contemn, but which have in them the basis of a permanence and a power for our industry and commerce that no arithmetician can figure out and no logician can argue. For who shall measure the spirit of man by numbers or by reason? It must be remembered that we can not treat men arithmetically. You need but to look into your own homes to see that. One of your children has an artistic bent; another is determined upon medicine; a third has the mechanical gift. They have not the same values in the same place. Each has his greatest value in his fit place. If you took the one having the mechanical gift and put him in his proper sphere, you would not have two like him if you added the one with the artistic gift beside him. Reckoning as mechanics, you would not have two, but one. If the matter were reversed, you would not have two artists, but one artist and one mechanic. We have too much measured men in our commerce and industry by mere arithmetic. Take them as they stand at their benches in the shop. Are we not a good deal prone to reckon them as so many hands and forget the difference in minds? A psychologist who knew his job would laugh at our classification of men by numbers and, taking the standard of a mechanic as his basis, would say to you: "Out of your 500 men you have 200 mechanics, and perhaps 200 part mechanics, and 100 who are not mechanics at all." Yet they are but men to many a thoughtless manager. Some day an ideal will spring up which will say to you: "Why do you regard the hands of

your men only? Why not think about their heads? Perhaps when we study the minds of men as carefully as we study the tools we put in their hands some difficulties will cease to trouble us." It is strange to me that as a practical people we should so long have gone on by rule of thumb and be but just beginning to look at the actual human facts. But the night is going, and in time we shall come to the day when our children shall all be trained to do some one thing well, which day may God bring quickly; then we shall employ men not at the lowest figure that their untrained circumstances require them to take, but at a compensation based upon what they actually know how to do and at work fitted for their mental equipment, and shall thus apply to human beings the same ordinary laws of common sense which we now use when we make loans or buy tools or purchase clothing; that is, we shall employ with due regard to the quality of the person employed.

Just a final word. I speak of these things as an evolution, and never as a revolution. It seems to be a law of nature that the plants and animals that have the longest infancy live the longest lives, and we shall not gain by trying extravagantly to accelerate the working out even of the highest ideals. The wisest course seems to be to keep our minds open even to truth which is strange; to remember that to say "I do not believe it" is at once the height of dogmatism and the most unscientific of attitudes; and having open minds and willingness to obey the truth when we find it and to the extent that we see it, to grow and not to lie supine. In that growing we shall come at last into a fruition which shall be profitable and pleasant alike to us and to those who have the good fortune to be in our service.

Protection of American Citizens Abroad.

EXTENSION OF REMARKS

OF

HON. RICHARD BARTHOLDT,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, November 11, 1913.

Mr. BARTHOLDT. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include an article by Charles Fletcher Dole, which appears in the Boston Herald of Saturday, November 8, 1913.

The article is as follows:

PROTECTING OUR CITIZENS ABROAD.

How far ought a government to go in its efforts to protect the life and property of its citizens who undertake enterprises in backward or half-civilized countries? This question has never been authoritatively answered. Upon the nature of the answer to it hang the most delicate and tremendous issues affecting the peace of the world. This is now the fundamental question as regards the policy of the United States in the treatment of Mexico.

Perhaps the first answer that occurs to anyone who has never carefully considered the question is that the national flag ought to be made to protect all citizens everywhere. This has sometimes been hinted, at least in public addresses, by high officials of our Government. No one, however, has ever had any authority to say this. No vote of Congress, passed after a full and adequate discussion and in clear view of the momentous character of the subject, has ever established the policy of an administration. Much less has there ever been an appeal to the judgment of the American people to determine what they hold the answer to this great question should be. Is there any guiding principle here to mark the limit between hasty and thoughtless popular impulse and wise, humane, and civilized action?

There is just one principle which throws light upon the duty of a nation upon the subject of the care of its people who live or do business in foreign countries. Mr. Roosevelt has distinctly laid down the rule that nations ought to be governed in their conduct to each other by the same principle which should govern individuals, namely, what we call "the golden rule." Possibly Mr. Roosevelt has not altogether thought out how far-reaching this principle is.

Let us grapple frankly, now, with the situation in Mexico and see where our duty—in other words, where humanity—will carry us. As soon as we begin to put ourselves in our neighbor's place it becomes evident that the slightest tone of official arrogance and superiority on the part of the Government of the United States or the attitude of offering a threat must create extra nervous tension and irritability among the Mexican people and actually render the conditions more perilous for our nationals, whereas the attitude of patience and sympathy and the evident will on our part to repose trust in the good faith of the Mexicans will tend to strengthen the hands of the friends of order and to dispose the people kindly toward American residents. We must never forget that Mexico has no special reason for loving the nation which contrived to possess itself of half of her territory.

But suppose the worst, namely, that Americans were to lose their lives in the more disturbed parts of Mexico and that the Mexican Government was unable to afford immediate reparation, what ought the Government of the United States to do with reference to the welfare of both nations? Because 100 or 500 Americans had lost their lives in taking risks of business enterprise in a country as subject to the peril of revolutions as it is subject to earthquakes, should the United States still further endanger the lives of the remaining Americans and prepare to kill innumerable quite innocent Mexicans and to sacrifice 100,000 young Americans in war? What good should we thus be doing? Put ourselves again in the time of crisis through which the United States passed in the Civil War and ask what would have been the only friendly attitude toward us on the part of England or Italy in case some of their nationals had lost their lives in the draft riots of that period. We should have expected them not to be impatient to punish us or to force reparation, but rather to have assumed that we should do justice when once we had got into calmer waters. The assumption that a nation will do justice, backed up by friendly diplomacy and patience—such is human nature—will be more effective in the end than a fleet of dreadnoughts.

There is a subtle and peculiar danger of meddlesomeness in our relations to the Latin-American peoples. We would never go to the verge of a ruinous war to protect the honor of our flag for the sake of American citizens who ventured into the Balkan States, or into Turkey or Persia, or who insisted on being protected wherever they might like to live in Russia. Everyone sees the folly of such a proposition. We respect the powers across the sea as if they were our equals. We live on diplomatic good terms with a monster of iniquity, if he happens to be Sultan of Turkey. But we are inclined to look upon the nations to the south of us as our political inferiors, or at best as children. We are disposed to set ideals for them which we do not yet live up to ourselves. We would like to enter in and help them manage their domestic economy, and collect their customs for them, and administer upon their debts, and establish ourselves as their protectors against European adventurers. Why will we not see that however kindly our motives are this conduct is as distinctly away from the line of the golden rule, or of what we would ever have tolerated ourselves, as if we were to approach these Spanish neighbors of ours at the point of the bayonet? Indeed, it is perhaps easier to be treated with enmity by those who deem us their equals than to be treated with haughty philanthropy by those who hold themselves above us.

The great question at issue before our Nation has only one answer. It is not the business of any nation to underwrite the safety of her citizens who take ventures in other countries. Let them go at their own risks and be so much the more on their good behavior. They may fairly expect such aid and comfort and advice as the agents and consuls of their own governments can give them. But they have no claim to be defended or, in the worst case, to be avenged by an invading army. They have no claim to governmental intervention by any show of force to safeguard or collect their debts, whether owed by individuals or by so-called government.

The United States, being fairly free of embarrassing traditions, has a grand opportunity at the present moment to establish this principle. Its clear establishment would promise the South and Central American Republics almost complete release from any concern about armed intervention from abroad. If they wanted to borrow money, they would have to learn to behave themselves honorably and not engage to pay usurious interest. If they wished to enjoy trade with other peoples, they would have to prove themselves worthy of sound commercial relations, as all other trading nations have slowly learned.

The principle that no government should go to war for the protection of individual citizens, but should depend in every doubtful case upon the urgency of patient diplomacy and the justice of its cause, immediately disposes of the alleged necessity of great armaments. If anyone asks further proof of the adequacy of this principle, it is to be found in the long story, sometimes of the failure and again of the sickening cost, of the efforts to compel justice and security of life and property by force of punishment and the use of military power. Civilization has slowly come in by virtue of the opposite principle. Respect men as men and they learn to respect us, not otherwise. Trust them as men and they learn to answer to our trust.

Finally, it may be that we shall some time work out a world system of international relations in which the good offices of all shall be brought to bear with such immediacy upon refractory or barbarous powers that no nation would be tempted to urge its superior strength upon such a situation as is now presented in Mexico. When this is the case, there will be the least need for the show of force, for the mandate or advice of a great disinterested family council of the nations would have the natural weight, like the decision of a supreme court, to enforce itself upon the conscience and judgment of the offending nation. Meanwhile, in the absence of any ultimate court of appeal, let history show us on every page what we ought to expect, namely, that no nation is ever good enough, or wise enough, or unselfish enough by itself to be a safe arbiter and judge, especially unasked and unwelcome, in the political affairs of its neighbors. Wherever we should have to march armies over the bodies of a resisting people let us know that we are marching apart from the ideals of civilization.

Party Caucus.

EXTENSION OF REMARKS

OF

HON. HARVEY B. FERGUSSON,

OF NEW MEXICO,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, November 11, 1913.

Mr. FERGUSSON. Mr. Speaker, the well-nigh universal condemnation in the public mind of the caucus and caucus methods must be admitted to exist in this country at the present moment.

It is an interesting subject of speculation why this is so. Surely not because of any innate vice in the caucus itself. Indeed, the caucus, in matters of legislation, may be said to be a necessary concomitant of a people's government. It has come to be an axiom that a people's government must be carried on by means of party—a party, in the political sense, being merely an aggregation of all those who believe in certain principles of government as necessary to be enforced to promote the welfare of our country and at the same time to preserve our free institutions from subtle decay and final destruction. It is equally obvious that for a large number of citizens and voters to act together for this noble and common purpose it is necessary for them to openly or tacitly agree to act together, and that can only be done by ascertaining and loyally abiding by the will of the majority of all those professing the party belief.

The only possible way to ascertain such will is by means of the party caucus, and the efficacy of the party is at once destroyed and the principles it was organized to promote are basely betrayed if less than the majority arrogate to themselves to thwart the general party policy. A complete, comprehensive, and notable change in our governmental methods was voted in the last election, and the Democratic Party is in control of the entire lawmaking machinery of our Government. More than 500 legislators have assembled, representing nearly a hundred million people dispersed over an immense extent of country, with every diversity of climate, occupation, industry, and local interest—in numerous ways selfish local interest in conflict in greater or less degree with the great nation-wide general interest or commission intrusted to the majority party to enforce. The individual members of the majority party, each and every one of them honor bound by his party platform and his expressed and implied pledge to carry out by his vote and action such principles, meet in caucus to adjust the real or fancied conflicts between the great general principles and local, special, and minor interests, to ascertain what may be reconciled and found consistent with the main purpose of the people and what must be ignored or made to give way to the greater general good. That is the legitimate, indeed the necessary, aim of the party caucus, so that the full strength of the majority party may be made effective to carry out the people's will as to overshadowing, nation-wide principles of government.

Who will say that in itself the party caucus is an evil thing? Who will say that in our great country the party caucus is not a necessary procedure in administering our system of government?

Yet it is an undeniable fact that at this moment the party caucus is held in utter detestation in the popular mind. And our antagonists across the aisle have dishonored the very walls of this historic Chamber by their hypocritical wailings over the Democratic caucuses of this Congress.

We, the Democratic majority, are quite willing to abide by that ancient rule as applied to the party caucus, "By their fruits ye shall know them." The same rule applied to Republican caucuses of the past will afford a most satisfying reason for the unusual opprobrium existing in this country touching the party caucus.

The people, in the last election, applied the rule "By their fruits ye shall know them." They saw manifest the results flowing from Republican use of the party caucus, and certainty was produced in the popular mind by the revolt of the progressive Republicans, men patriotic enough to break away from the evil practices of the special-interest Republicans and courageous enough to turn state's evidence and promote the welfare of the country by revealing the inside workings of the Republican caucus.

The people know that in the secrecy of the Republican caucus their Government was turned over to the special interests, to the "malefactors of great wealth," and that this great wrong was done by selfish and corrupt politicians in return for campaign contributions. To hold themselves in power they used boodle to debauch the voters, and they obtained the bribe money in return for betraying their sacred trust as representatives of the people; and as a concrete example they permitted the beneficiaries of the tariff to write any—the most outrageous—rates into the tariff bills. This was done time and again behind the walls of the secret party caucus, as you reactionary Republicans used the party caucuses. You used the party caucuses to build up the trusts and monopolies, to hold the present universally condemned currency and banking system in force in this country for more than 50 years, though it was enacted in the throes of the Civil War—made so favorable to the money interests because necessary to induce the unpatriotic money power to furnish the money needed to save the Union. Under the domination of selfish, unpatriotic men your party has been the ruinous instrument by which the wealth of the Nation has accumulated in the hands of a few, by which the mass of our people have been subjected to wrongs and sufferings that recall the infamies of the rule of the Bourbons in France preceding the French Revolution. I ought not to conclude this brief, necessarily condensed statement without looking a moment at the converse of the caucus proposition.

Suppose we do away with all caucuses, good and bad? That would put it in the power of one, two, three representatives in power, equally charged with their party fellows to promote certain great, nation-wide policies of government, to thwart the will of the people and defeat the noble aim of their party as a whole. The will of the majority must be supreme in a people's government. Else it is conceivable that an unworthy man, a vain man, a man full of spite or other petty motive, might defeat a great, patriotic, fundamental mission of a party in power.

Tennyson, in his wonderful vision in Locksley Hall, dreams of a federation of the world, where—

> The common sense of most shall hold a fretful realm in awe,
> And the kindly earth shall slumber, lapped in universal law.

Mendel Beilis.

EXTENSION OF REMARKS

OF

HON. FRANK E. DOREMUS,

OF MICHIGAN,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, November 6, 1913.

Mr. DOREMUS. Mr. Speaker, it was my pleasure to attend, on Sunday last, a mass meeting of my constituents in Detroit, Mich., called for the purpose of protesting against the attempt now being made to convict Mendel Beilis, a Russian Jew, of the crime of ritual murder.

This meeting was attended by upward of 6,000 citizens of Detroit, representing various nationalities and religious beliefs. This splendid audience voiced in no uncertain terms the indignation felt by unbiased minds everywhere against the unjust and outrageous attempt to fasten upon the Jewish race the crime of ritual murder.

At the conclusion of the meeting the following memorial was unanimously adopted:

The citizens of the city of Detroit, irrespective of race and religious affiliation, hereby protest against the prosecution of the outrageous charge of ritual murder brought by the Russian Government against Mendel Beilis.

In the name of humanity we deplore and denounce this injustice, and we respectfully call on the United States Government to voice our indignation at this attack upon Judaism.

We furthermore respectfully request our Representative in Congress, Hon. FRANK E. DOREMUS, to present these resolutions to the House of Representatives and to the proper department of our Government.

Attest:

ALFRED J. MURPHY,
Chairman of the Meeting.

I have also been requested to have printed in the RECORD the following resolution adopted by the Socialist Party in Detroit October 31, 1913:

Resolution.

We, as members of the Socialist Party of Detroit, Mich., assembled here to support the principles of international socialism, are opposed to all national and race prejudices. We have given the published reports of the Mendel Beilis case at Kief, Russia, careful consideration, and we declare the charge of ritual murder obsolete, unwarranted, and an insidious measure to arouse a fanatical religious persecution against the Jewish race. We believe this but one of the many tyrannical methods employed by the Russian Government in its suppression of political liberty and that a trial by jury has heretofore been denied this victim through fear of public sentiment: Therefore be it

Resolved, That we, the Socialist Party of Detroit, Mich., hereby take this method of voicing our protest against—

1. The ruthless procedure of the Russian Government of depriving any civilized race within its boundaries of its political and religious rights.

2. The undemocratic measure of denying its citizens the right of trial by jury.

3. The unjust victimizing of Mendel Beilis in denying him bail and keeping him imprisoned two years without a trial. Be it further

Resolved, That a copy of this resolution be forwarded to the State and national offices of the Socialist Party of the United States of America with the recommendation that this resolution be given as much publicity as possible.

J. H. BEYER,
A. ROVIN,
ROBERT WESTFALL,
The Beilis Resolution Committee.

Currency.

EXTENSION OF REMARKS
OF
HON. A. W. LAFFERTY,
OF OREGON,

IN THE HOUSE OF REPRESENTATIVES,

Monday, September 15, 1913,

On the bill (H. R. 7837) to provide for the establishment of Federal reserve banks, for furnishing an elastic currency, affording means of rediscounting commercial paper, and to establish a more effective supervision of banking in the United States, and for other purposes.

Mr. LAFFERTY. Mr. Speaker, under the leave granted me so to do, I hereby submit for printing in the RECORD, as a part of my remarks, the following interview printed in the Washington Post, October 13, 1913.

CUTS OUT THE BANKS—LAFFERTY'S BILL HANDS CURRENCY DIRECT TO THE FARMER—UNITED STATES LOANS ON MORTGAGES—AT 2 PER CENT INTEREST, OREGON MEMBER CLAIMS, THE GOVERNMENT WOULD MAKE PROFIT WHICH COULD BE USED IN BUILDING ROADS—SECURITY BETTER THAN PROVIDED IN GLASS BILL, HE SAYS.

Representative LAFFERTY, of Oregon, introduced a currency bill Saturday which would practically eliminate the bankers in the future issuance of paper money by the Government.

The Lafferty bill calls for the loan of Treasury notes direct to the farmers of the country at 2 per cent interest on first mortgages, which shall not exceed 60 per cent of the value of the land, and for loans of such Treasury notes at the same rate of interest to any holder of an outstanding United States bond who desires to deposit the bond as security.

It is stipulated that the Treasury notes to be so issued and loaned shall be redeemable at the Federal Treasury on demand, in gold coin or its equivalent, and that a reserve fund in gold coin shall be maintained in the Treasury at all times, equal to 5 per cent of the outstanding Treasury notes, for the purpose of such redemption. It is provided that the Treasury notes shall be retired and canceled as rapidly as the obligations to the Government securing the same are discharged.

ADVANTAGES CLAIMED BY AUTHOR.

It is claimed by the author of the bill that the security for the circulation of the Treasury notes which is provided in the bill is better than the security provided by the Glass-Owen bill, which provides for the issuance of Treasury notes based upon commercial paper. The distinction between the Lafferty bill and the administration currency bill, as claimed by the author of the former, is this: The administration bill provides for the issuance of Treasury notes to the banks at one-half of 1 per cent interest, secured by the deposit with the Government of commercial paper, whereas the Lafferty bill provides for the issuance of such Treasury notes to the farmers and investors of the country at 2 per cent interest upon the security of first mortgages on agricultural lands and upon Government bonds.

The Lafferty bill further provides that the profits derived by the Government through the loans of Treasury notes shall be set aside as a special fund for the building of public highways.

GOLD STANDARD SAFEGUARDED.

"There can be no question but what such a law as I have proposed would supply the country with all the currency it needs," said Representative LAFFERTY last night. "Many people will doubt the feasibility of the plan, because it is so simple. In other words, it will naturally appear to most persons at first blush as being too good to be true.

"But the time is just now approaching when the people are actually getting control of their own Government, and when that time arrives it may be safely said that this will be the only Government in the world that will be completely in the hands of the people. It is because such an epoch is near at hand that Congressmen are beginning to feel at liberty to act with absolute freedom and independence.

"It can not be said that the law I have proposed provides for fiat money or for an inflation of the currency. The bill safeguards the gold standard, making each Treasury note issued redeemable by the Federal Government in gold coin if demanded. Nor can there be any inflation of the currency so long as the redemption in gold coin of each Treasury note issued is provided for by an enforceable contract with good security.

WOULD REDUCE ALL INTEREST RATES.

"The passage of such a bill as I have introduced would at once bring interest rates down on short-time loans to 3 or 4 per cent. It would provide money to the farmers at 2 per cent and would reduce the cost of living in this country at least one-third.

"The farmers now have borrowed approximately $8,000,000,000 and pay interest annually amounting to $500,000,000. In other words, the farmers pay interest annually equal to $5 per capita of the population. This $5 a head is added to the cost of living.

"Moreover, if the manufacturers and transportation companies could get cheaper money, all products could be supplied to the consumer at greatly reduced cost.

"Our present bank credit system is under the control of the money power and is used to rob the public. It is a simple plan and is easily understood. The total stock of money in the United States is only $3,500,000,000. Yet the banks have on deposit $17,000,000,000, or five times as much money as there is in existence in the country. The total stock of gold in the United States is only $1,000,000,000. In other words, if all the bank depositors should call for their money to-morrow and demand it in gold, the banks would not be able to pay but 1 depositor in 17, even if they had all the gold in the country in their vaults.

REAPING UNEARNED MILLIONS.

"By controlling the credit of the country, and by selling credit far in excess of the total money supply of the country, the money changers are reaping unearned millions annually from the American people. The money power in every country in the world is doing the same thing. America will be the first to break the shackles and set her people free.

"The complete solution of the problem is to issue money based upon the assets of the country, known as asset currency, and measure this money in gold, by making each paper dollar redeemable in gold or its equivalent. If this asset currency be issued direct to the people at 2 per cent interest hereafter, and upon the best of security, as proposed in my bill, it is safe to say that at least $10 per head will thereby be saved to the American people, which money is now going into the pockets of those who are creating swollen fortunes by controlling our credit."

National Drainage Congress.

EXTENSION OF REMARKS
OF
HON. JAMES T. LLOYD,
OF MISSOURI.

IN THE HOUSE OF REPRESENTATIVES,

Friday, November 14, 1913.

Mr. LLOYD. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD by including a statement of the National Drainage Congress concerning a bill (H. R. 8189) introduced by the Hon. CHAMP CLARK, of Missouri, September 16, 1913, establishing a flood protection and drainage fund and providing for the protection, drainage, and reclamation of the overflowed and swamp lands in the United States, in promotion of the general welfare, in prevention of the dissemination of malaria and other diseases among the several States, and to promote interstate commerce by navigation.

The SPEAKER. The gentleman from Missouri asks unanimous consent to extend his remarks in the RECORD. Is there objection?

There was no objection.

The statement is as follows:

FLOOD PROTECTION, DRAINAGE, AND RECLAMATION OF OVERFLOWED LANDS, SWAMP LANDS, AND LANDS TOO WET FOR AGRICULTURAL PURPOSES.

Statement from National Drainage Congress concerning a bill introduced in the House of Representatives by Hon. CHAMP CLARK September 16, 1913, establishing a flood protection and drainage fund and providing for the protection, drainage, and reclamation of the overflowed and swamp lands in the United States, in promotion of the general welfare, in prevention of the dissemination of malaria and other diseases among the several States, and to promote interstate commerce by navigation.

To the Senate and House of Representatives of the United States:

While the appalling floods of 1913 in the Ohio Valley were destroying lives and property, the President of the United States sent the following telegram:

THE WHITE HOUSE,
Washington, March 27, 1913.

EDMUND T. PERKINS,
Chairman Executive Committee, National Drainage Congress,
First National Bank Building, Chicago, Ill.:

I regret that it is impossible for me to attend the sessions of the National Drainage Congress. The calamity in Ohio and Indiana makes clearer than ever before the imperative and immediate necessity for a comprehensive and systematic plan for drainage and flood control. I very earnestly hope that your deliberations may mark a long step forward in this direction. Accept my best wishes for a successful meeting.

WOODROW WILSON.

The following telegram was sent in reply:

CHICAGO, ILL., *March 28, 1913.*

The PRESIDENT,
The White House, Washington, D. C.:

Your message, March 27 received. * * * The National Drainage Congress, saddened by the tremendous flood disasters now inflicted upon our country, and knowing that such catastrophes are needless, accepts the responsibility of presenting to the people and the Congress of the United States a plan to alleviate and prevent the recurrence of loss of life and property. * * *

EDMUND T. PERKINS,
Chairman Executive Committee, National Drainage Congress.

The third annual meeting of the National Drainage Congress was held immediately thereafter, April 10, 11, and 12, at St. Louis, Mo., and the organization accepted this responsibility, 30 States being represented by approximately 500 delegates. After two days' cooperative deliberation by the national executive committee, the committee on resolutions, the section on malaria eradication, the central cooperative committee, and the woman's section, resolutions were adopted, addressed to the President, the Congress, and the people of the United States, urging:

First. That it is a proper function of the Government of the United States under the welfare clause of the Constitution to provide adequate works to control the flood waters of the country and so conserve them as to protect the life, health, and property of citizens, a duty equally imperative as that of protecting citizens from the attack of a foreign foe.

Second. That the Congress of the United States immediately make adequate provisions for flood prevention, for the regulation and control of stream flow, and for the drainage and reclamation of overflowed and swamp lands.

Third. That, as malarial diseases are widespread, especially in the regions where floods occur and swamps exist, causing great disability and suffering, loss of earning capacity, and a large number of preventable deaths, the several States and the Federal Government are requested to cooperate with the section of malaria eradication in the prevention by methods now well established of such diseases.

Fourth. That all reclamation organizations in the United States are invited to become part of the central cooperative committee, consisting of two members from each organization—National, State, district, or local—or by the governor of the State where there is no such organization, not surrendering their identity, charter, organization, or officers, for the purpose of advancing agreed-upon questions of national policy.

Copies of these resolutions were transmitted to the President of the United States, the President of the Senate, and the Speaker of the House of Representatives.

In May the general educational committee of the National Drainage Congress met in Washington, called upon the President, and conferred with the Secretary of the Interior, the Secretary of Agriculture, the Secretary of War, the President of the Senate, the Speaker of the House, and a number of Senators and Representatives. This committee was composed of the officers of the organization and prominent men and women from professional walks of life in all parts of the United States.

As a result of these conferences a subcommittee, known as the committee on Federal action, was appointed to cooperate with representatives of the Secretary of the Interior and the Secretary of Agriculture and draft a flood-prevention and drainage bill. This subcommittee was composed of E. J. Watson, of Columbia, S. C., State commissioner of agriculture, commerce, and industries; Frank B. Knight, of Chicago, Ill., member of the American Society of Civil Engineers and consulting engineer and expert on excavating and drainage machinery; Thomas P. Littlepage, of Washington, D. C., attorney at law; Morris Knowles, of Pittsburgh, Pa., member of the American Society of Civil Engineers, representing the flood commission of Pittsburgh; J. L. Craig, of Stockton, Cal., president of the river-regulation commission of Stockton; L. L. Lawrence, of Laurel, Miss., treasurer of the Railway Development Association and manager of immigration of the New Orleans, Mobile & Chicago Railroad; Joseph Hyde Pratt, of Chapel Hill, N. C., State geologist; J. S. Spiker, of Vincennes, Ind., member of the Western Society of Engineers, consulting and sanitary engineer; Reid Whitford, of Charleston, S. C., member of the American Society of Civil Engineers and engineer for the sanitary and drainage district of Charleston; and John H. Nolen, of Jefferson City, Mo., commissioner of land reclamation, State of Missouri. The Secretary of the Interior selected the following persons to confer with the committee representing the drainage congress: E. H. Newell, Director of the United States Reclamation Service; George Otis Smith, Director of the United States Geological Survey; and Brig. Gen. W. H. Marshall, consulting engineer, United States Reclamation Service, and former Chief Engineer, United States Army. The representatives of the Secretary of Agriculture were Prof. A. J. Henry, of the United States Weather Bureau; Raphael Zon, of the United States Forest Service; and S. H. McCrory, of the Bureau of Drainage Investigations of the Office of Experiment Stations.

The Hon. Franklin K. Lane, Secretary of the Interior, on June 21, 1913, invited to meet with him in Washington to discuss proposed flood-protection and drainage laws a number of eminent men, as follows: Isham Randolph, consulting engineer, Chicago, Ill.; Prof. William B. Clark, of Johns Hopkins University, Baltimore, Md.; Hon. T. Coleman du Pont, of Wilmington, Del.; W. W. Olds, jr., attorney at law, of Norfolk, Va.; Gov. W. S. Jennings, of Jacksonville, Fla.; Prof. Joseph Hyde Pratt, of Chapel Hill, N. C.; and M. C. Leighton, of Washington, D. C., former chief hydrographer of the United States Geological Survey. These, with Secretary Lane, Judge William R. King, of Oregon, George Otis Smith, and E. H. Newell, held a conference on June 28, 1913. A subcommittee was appointed, consisting of Gov. Jennings, Judge King, and Prof. Pratt, to suggest desirable legislation and report July 9, a day prior to the scheduled meeting of the committee on Federal action of the National Drainage Congress.

This last-mentioned committee met in Washington on July 10, 1913, and after consultation with the above mentioned, as well as with other eminent men in the city, drafted a bill, which draft was later submitted to the executive committee, and that committee, after making a number of changes and additions, approved it at a meeting held in Chicago on August 22, 1913.

September 10, 1913, the committee on Federal action and the board of governors of the National Drainage Congress assembled in Washington and conferred with the Hon. CHAMP CLARK, Speaker of the House of Representatives, and with Senator JOHN SHARP WILLIAMS, of Mississippi, relative to this bill. On September 16, 1913, the bill was introduced in the House of Representatives by Speaker CLARK, and is now registered as H. R. 8189.

This bill is the reply of the National Drainage Congress to the telegram of March 27, 1913, from President Wilson, and is urged as providing the solution of the flood prevention and land drainage and general reclamation of the overflowed and swamp lands in the United States.

This bill establishes the power and indicates the method by which the Secretary of the Interior may construct the works that will control disastrous floods hereafter, thereby preventing loss of life and destruction of property, protecting overflowed lands, and draining the swamps, and thus reclaiming the millions of acres of such lands and other lands too wet for agricultural purposes. It provides that the expense of this work shall be borne by the owners of the land and other property benefited, and that the United States shall pay only for such work as will promote navigation by enlarging, improving, or altering navigable streams, or constructing drainage ditches suitable for navigation, or for that work which is primarily in defense of the general welfare by the improvement of the public health. It defines the rules by which these great works are to be constructed, vests the necessary authority in the Secretary of the Interior to do the work, leaves in the hands of Congress questions of policy and appropriations, and safeguards the financial interests of the United States.

The bill was designed to give the Secretary of the Interior full power without attempting to be too specific and definite as to the exact manner in which the work shall be done. It gives him authority to employ competent engineers and experts to work out systematic plans for comprehensive projects that shall embrace all the lands in each basin as a unit. Such a policy will enable the Secretary to establish a definite plan of flood-protection, drainage, and reclamation work for the entire country, and thus avoid the waste of money and effort through the construction of local works in unrelated units.

This bill is not confiscatory; neither does it infringe upon State or private rights. It does not give the Secretary of the Interior the right to reclaim individual or State lands without the consent of the owners. He is empowered to undertake the reclamation of private or State lands only when petitioned so to do by the owners of such lands.

This bill recognizes that the prevention of floods and the reclamation of our overflowed and swamp lands is one vast problem and is the most momentous the people of the United States have yet to solve, and that its solution, in order to be complete and successful, must proceed along the broadest possible lines in each locality of every State without unnecessary delay. It recognizes that the Government of the United States is charged under the Constitution with certain duties in the way of protecting its citizens and preserving their belongings, and that the performance of these duties should be delayed no longer.

The magnitude of the flood-protection work with which this bill charges the Secretary of the Interior is so well known as to require no comment, being over $200,000,000 in 1913 alone. The magnitude of the harm done by malaria, a disease that flourishes only because there are swamps and flooded areas in the country, was stated by Dr. William A. Evans, former health commissioner of the city of Chicago and writer of health articles for many papers, in his address before the National Drainage Congress at St. Louis, in April, 1913, when he said:

Loss through malaria deaths, per annum	$10,200,000
Cost of disability and illness from malaria	92,000,000
Depreciation of real estate and loss in earning power of labor, due to malaria	60,000,000
Total annual economic loss	162,200,000

In arriving at these estimates Dr. Evans frequently cut in half the generally accepted estimates. The terrible suffering that must be endured by humanity so long as malaria is permitted to exist is a matter of the deepest concern to the whole Nation.

The magnitude of the task of draining and reclaiming overflowed, swamp lands, and lands too wet for agricultural purposes is not so well known. The overflowed and swamp lands comprise an area of nearly 80,000,000 acres. In addition to this area, as large as the four States of Maine, Ohio, Indiana, and Illinois combined, the Department of Agriculture has estimated that 150,000,000 acres of agricultural land under cultivation are not producing within 20 per cent as much as they should, because of insufficient drainage. The

overflowed and swamp lands are located in 40 States, the Territory of Alaska not being included in the estimate, as follows:

ESTIMATED AREA OF UNRECLAIMED SWAMP AND OVERFLOWED LANDS IN THE UNITED STATES.

Reclaimable for agricultural and grazing purposes. (Abstract from report of the Department of Agriculture, Apr. 21, 1908. S. Doc. 443, (60th Cong.):

	Acres.
Alabama	1,479,200
Arkansas	5,912,300

Washington	20,500
West Virginia	23,900
Wisconsin	2,360,000
Total	79,005,023

It is not possible at the present time and under present conditions to reclaim profitably all of the overflowed and swamp lands for crop production, but a large per cent can be reclaimed and utilized for this purpose. Much of the remaining portion can be improved by reclamation works, and practically all of the 150,000,000 acres too wet for the best agricultural results can be improved by better drainage and their present productivity increased by one-fifth.

A few citations of what has been accomplished by the protection, drainage, and reclamation of overflowed and swamp lands will demonstrate in a general way the benefits to be derived from land reclamation and illustrate what may be expected from the reclamation of all our overflowed and swamp lands.

The La Marsh drainage district consists of 2,400 acres on the west side of the Illinois River, near the city of Pekin, Ill. It was organized a few years ago under the Illinois State drainage and levee acts. The land originally consisted of swamp and marshes or lands subject to periodical annual and destructive overflow. Money was raised by the issuance of drainage bonds by the district to pay for the protection and reclamation works. The land at that time was valued at from $12.50 to $20 per acre. The corn crop of 1911 raised on these 2,400 acres was sold for $85,000. The cost of protecting, draining, and reclaiming the district had amounted to $84,000, or about $35 per acre.

The Island farm, at Island, Minn., was reclaimed from the big Floodwood swamp, at a cost of $2 per acre for drainage and from $3 to $10 an acre for clearing. There are 4,000 acres in the farm, valued to-day, exclusive of building, at not less than $60 per acre. The land was practically worthless until reclamation work was perfected.

Great areas in southeast Missouri, which a few years ago were unhealthful, sparsely inhabited, and generally neglected, have been protected from overflow and drained, and in place of the swamps and marshes, few farms and homes, and straggling villages, there are to-day many homes, fertile fields, numerous and prosperous towns and cities.

A number of such illustrations could be found in Illinois, Indiana, Ohio, Iowa, Minnesota, Missouri, New York, South Carolina, and other States. Local reclamation work in the lower Mississippi Valley has been under way long enough to make it unquestionable that the land will produce each year enough to pay the total cost of works for protection, drainage, and reclamation.

In too many localities these works created by districts, individuals, or corporations, and even by States, are unrelated. Their success is too nearly dependent upon the manner in which the main drainage channels are constructed; the streams and rivers are kept open and within their banks, or of sufficient size; and—which is becoming a growing problem—upon their ability to defend themselves from the waters thrown upon them by districts located above. Multiply these unrelated, selfish local drainage districts and works by 10,000, and it is apparent why the work as a whole should move along under the direction and supervision of a central authority and in accord with a fixed and recognized standard.

The bill introduced by Speaker CLARK provides this central authority which may determine and maintain such a standard. The first section creates a "flood protection and drainage fund" to be used by the Secretary of the Interior in the examination and survey for and the construction, operation, and maintenance of drains, canals, holding basins, reservoirs, levees, dikes, revetments, mattresses, tree planting, sluiceways, pumping plants, and other works wherever needed for the prevention of flood or for the protection, drainage, or reclamation of overflowed lands, swamp lands, and lands too wet for agricultural purposes, all of which are pronounced dangerous to the public health among the various States. This fund is made up of the money received from the sale of public lands in those States—not included in the reclamation act providing for the irrigation of arid lands—in which are public lands, and also in Alaska, from June 30, 1901, with the legal exceptions for educational purposes. The wording of the reclamation act was followed as nearly as possible in this and other sections of this bill.

Section 2 authorizes the Secretary to undertake the works mentioned in section 1, and to make full reports to Congress each year on or before July 1, giving details of what has been done and of what is being done and of what is contemplated.

Section 3 authorizes the Secretary to withdraw public lands from entry when required in carrying out the purposes of the act, and to restore them when found not necessary; to restore to public entry the public or ceded Indian lands, after they have been protected, drained, or reclaimed, specifying the number of acres which can be taken up as a "drainage" entry, which shall not be more than 160 acres, and specifying the amount of payment for these lands, being the regular fees plus the cost of the work, and how the purchase money shall be paid, the total cost of the drainage or reclamation of the land to be assessed against the land.

Section 4 authorizes the Secretary to let contracts for construction and to construct parts of a project or a complete project; it specifies the manner in which the Secretary shall dispose of the protected and reclaimed public and ceded Indian lands. This section contains a proviso that when the lands in a project are owned wholly by individuals, corporations, State or States, the owners may use the surveys and examinations, and let contracts, after they have organized the lands into a drainage district, and otherwise proceed under the State laws; and the further proviso that the Secretary may take over surveys partially completed, plans partially outlined, or works partially constructed by individual landowners.

Section 5 gives the Secretary the right to accept other than public lands and include them in a project where they are contiguous to or in the same basin with an area of public land to be protected or reclaimed, when the landowners petition him to do so. The Secretary is empowered to "include such State or private land, with the selected (public) land in a comprehensive protection, drainage or reclamation project, and construct the main and outlet canals, levees, and appurtenant structures necessary to the whole project." The cost is to be assessed against all the lands in proportion to the benefits derived. These assessments against State and private lands are to be collected by the State or drainage or levee district under State laws. To protect the Government and prevent interference by Federal with State authorities. Section 5 specifies that the Secretary of the Interior shall not proceed with such works until the drainage or levee district has issued bonds to the amount of the total assessments of cost against the private or State lands and delivered the bonds to him.

The Secretary is authorized to purchase the bonds at not less than par and to dispose of them. In lieu of the bond issue the Secretary may accept not less than 25 per cent of the total area in the project as a cession from State or private landowners, and then pay the entire cost of construction. This is upon the assumption that 25 per cent of the reclaimed land will be valuable enough to reimburse the Government for reclaiming the entire area of State or private lands. If the work is being done by State or States or drainage districts, the money derived from the bonds shall be turned over to them as required to carry on the work under the supervision of the Secretary of the Interior. This section will provide drainage districts an immediate market for their bonds at not less than par, provided they construct their work under the supervision of the Secretary of the Interior and in accordance with plans prepared by him.

Section 6 empowers the Secretary to use the fund for the operation and maintenance of the works; that the works shall belong to the United States until all assessments of costs are paid, though these works shall pass to the landowners and be maintained by them under State jurisdiction and law after payment has been made to the Secretary for the major part of the lands.

Section 7 authorizes the Secretary to consult and cooperate with the Secretary of War when any contemplated work provides for the improvement or enlarging of natural channels or the excavation or construction of navigable canals, or which by reasonable enlargement or other alteration might be adapted to navigation purposes. If the War Department reports favorably upon the waterway feature, then the Secretary of the Interior and the Secretary of War shall cooperate in construction of the project and the Government shall pay for that part of the work relating directly to navigation, the channels or canals to remain under the control and jurisdiction of the United States, but to be used so as not to impair their usefulness for protection or drainage purposes.

Section 8 seeks to bring about cooperation between States where overflowed and swamp areas and flood-visited districts which extend from one State into another. This section gives the Secretary of the Interior the power to construct works to protect or reclaim these areas when the several landowners or States shall request him to do so, even if there are no public lands in the area. The cost of this work is to be assessed against the land, as provided in section 5, except that the United States shall pay that part which relates directly to the improvement of navigation.

Section 9 gives the Secretary the right to acquire rights or property by purchase or condemnation to carry out the act.

Section 10 authorizes the Secretary to lease the lands reserved or acquired under the act and to sell the same.

Section 11 authorizes the Secretary to accept from any State or States, drainage or levee district or districts, or other landowner a cession of reclaimable lands which can be included in any project and to use and dispose of the same.

Section 12 appropriates $20,000,000 from the general funds in the Treasury to form part of the "flood protection and drainage fund."

Section 13 imposes a fine not exceeding $5,000 or imprisonment not exceeding five years, or both for willful interference with, injury to, or destruction of any works constructed under the act.

Section 14 provides that the President may set apart and reserve town sites within or in the vicinity of any project, and authorizes the Secretary of the Interior to have the same surveyed, subdivided, appraised, and sold. The funds so secured may be used for municipal improvements, and public reservations shall be conveyed to the municipal corporation when the same is duly organized.

Section 15 gives the Secretary authority to lease the surplus power or power privileges of any development of power necessary in the construction of any project; the leases shall be for not longer than 50 years, and preference shall be given to municipal purposes, and the moneys received shall be covered into the "flood protection and drainage fund."

Section 16 authorizes the Secretary to perform whatever acts that are necessary and to make the proper rules and regulations to carry into full force and effect the provisions of the bill.

The United States has reclaimed private lands under the reclamation or irrigation act. The Eighth Annual Report of the Reclamation Service shows that in the Orland project, located in the State of California, of 14,000 acres (p. 59), only 200 acres were public lands. In the Garden City (Kans.) project of 10,677 acres (p. 85), all were private lands. In the Carlsbad project of 20,073 acres (p. 134), the ownership is described in the report as "practically all private." There are 10,000 acres in the Hondo project (p. 134), and all of them are private except 240 acres. All of the 20,000 acres in the Leesburg project (p. 140) are private. All of the 180,000 acres in the Rio Grande project (p. 143) are private. All of the 60,000 acres in the Strawberry Valley project (p. 184) are private. There are only 433 acres of public land in the Williston project of 120,000 acres (p. 152), and 67 acres of State land and 11,500 acres of private lands.

If it is constitutional and proper and good for the Government to reclaim private arid land, is it not just as constitutional, proper, and good for it to reclaim private overflowed, and swamp lands?

The Constitution gives the United States the right to act in matters touching two or more States, upon petition of the States. In this connection it may be pointed out that every great flood which devastates the country is an interstate problem, and its solution requires correlated and coordinated work among several States. Thus, without considering the constitutional power of Congress to provide for the general welfare of the United States, the question of flood protection comes within the power of Congress, upon petition of the States affected, even if it does not come within the interstate-commerce and navigation provisions and powers.

While there may be many differences in detail, and more differences as to the solution of the details, there can be no serious questioning of the statement that the flood problem and the drainage and reclamation problem and the problem of navigation and interstate commerce by waterways are so interwoven with each other that no one can tell exactly where one starts and the other ends.

The numerous, most destructive, most dangerous, most persistent, and nearest enemies of the people of the United States are internal enemies—forces of nature. These forces kill more persons each year than were slain in battles and died from the effects of sunshot wounds on both sides during our destructive Civil War, and the property destroyed each year by floods is worth more than the cost of our war with Spain.

The passage of this bill will start the successful opposition to and bring about the eradication of these internal enemies—floods; diseases resulting from floods, swamps, and marshes; destruction of property; poverty due to nondevelopment of land rich in agricultural possibilities; and poverty and suffering due to the ravages of preventable diseases.

The passage of this bill by the United States Congress is respectfully urged by the undersigned officers of the National Drainage Congress.

OFFICERS.

President: Edmund T. Perkins, consulting engineer, 1110 First National Bank Building, Chicago, Ill.

First vice president: E. J. Watson, commissioner of agriculture, commerce, and industries, Columbia, S. C.

Second vice president: Col. William C. Gorgas, United States Army, chief sanitary officer Panama Canal, Ancon, Panama.

Third vice president: Edward Wisner, landowner and capitalist, New Orleans, La.

Fourth vice president: D. E. Kind, industrial commissioner Missouri Pacific Railway, St. Louis, Mo.

Fifth vice president: J. L. Craig, president River Regulation Commission of Stockton, Cal.

Treasurer: A. M. McLachlen, president McLachlen Banking Corporation, Washington, D. C.

Secretary Executive Committee: Philip R. Kellar, First National Bank Building, Chicago, Ill.

BOARD OF GOVERNORS.

The president, E. J. Watson, John H. Nolen, Joseph Hyde Pratt, Frank B. Knight.

Hetch Hetchy.

EXTENSION OF REMARKS
OF
HON. HORACE M. TOWNER,
OF IOWA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, August 29, 1913,

On the bill (H. R. 7207) granting to the city and county of San Francisco certain rights of way in, over, and through certain public lands, the Yosemite National Park, and Stanislaus National Forest, and certain lands in the Yosemite National Park, the Stanislaus National Forest, and the public lands in the State of California, and for other purposes.

Mr. TOWNER. Mr. Speaker, through the courtesy of the House I am enabled to state my objections to House bill 7207. This bill grants to San Francisco the right to invade the Yosemite National Park, and to appropriate and destroy the Hetch Hetchy Valley therein for a reservoir and water supply. The principal reasons and grounds of my opposition may be briefly summarized as follows:

First. Admitting that San Francisco's present water supply is inadequate and that immediate relief is demanded, the passage of the present bill can not satisfy this demand, for the reason that it will require from 5 to 10 years to obtain water from Hetch Hetchy.

Second. Whatever may be done toward the acquisition for future needs of a permanent water supply, the nearby sources must first be developed as part of the system, and such development alone will supply all the demands of the city for years to come.

Third. In determining the location and source of a permanent water supply San Francisco should be required to obtain, if possible, such supply from the Coast Range or the Sacramento River, for they are nearest, most available, and will least injuriously affect other sections. At least three are thus available, Eel River, Putah Creek, and the Sacramento River.

Fourth. If a Sierra source is required, then the location should be within the Sacramento Valley rather than the San Joaquin, for the reason that the rainfall and water supply of the Sacramento is large and it can probably spare without injury the needed amount, while the supply in the San Joaquin is small and all of it is needed in the valley. There are several adequate and available supplies, either alone or in combination, in the Sacramento Valley.

Fifth. If an adequate and suitable supply can be obtained anywhere else without an invasion of a national park and the destruction of Hetch Hetchy, this application should be refused. There are several, and some of them can be obtained at much less cost than Hetch Hetchy.

Sixth. To divert 400,000,000 gallons of water daily from the San Joaquin Valley where it belongs would deprive 200,000 acres of irrigable land of water, render it permanently sterile, prevent further settlement and home building in the valley, stop its development and improvement, and impair its productive capacity to the extent of $20,000,000 yearly. The full water supply thus sought to be diverted can be utilized in the irrigation of the valley without the invasion of the park and the destruction of Hetch Hetchy.

Seventh. The terms of the bill extend national authority and jurisdiction over the interior waters of a State, an authority and jurisdiction hitherto claimed and acknowledged as belonging exclusively to the State. It invites and will inevitably bring conflicts between Nation and State, entailing endless litigation, irritating and injuring the people and municipalities whose interests are immediately affected, and endangering the cordial relationship that should exist between the State and the Nation.

Eighth. The proposal to use a national park for a municipal water supply is unreasonable and jeopardizes both interests. The primary object of the city is to secure a sanitary and uncontaminated water supply, and that discourages intrusion and tends toward exclusion. The purpose of a national park is to provide a place of rest and recreation for the people, and it is the policy of the Government to invite and induce the people to come within its precincts. There can be no harmonizing of interests where such divergent and antagonistic purposes exist.

Ninth. The city is to assume and is given the superintendence and sanitary control of the entire watershed which is tributary to Hetch Hetchy. This means that more than one-half of the Yosemite National Park, an area of over 500 square miles, is made subject to municipal control in the interest and with the purpose of securing an uncontaminated water supply. This will lead inevitably to the exclusion of the people from the larger and in many respects the most interesting portion of the park. If any measure of control is sought to be exercised by the Government over this portion, it will lead to conflicts of jurisdiction and interminable difficulties.

Tenth. Years ago, in 1864, the Government granted to the State of California the Yosemite Valley for park purposes. After an unsuccessful attempt to administer the trust committed to it, extending over a period of 42 years, the State upon its own initiative receded the tract to the Government, and it became a part of the present Yosemite National Park. It is a singular and indefensible proposition for the Government now to be asked to surrender a part of the park to a municipality of that State for its own private purposes.

Eleventh. The very object of a national park is to set apart and forever sequestrate its territory from the possibility of acquisition by corporations or individuals. To violate such purpose in this distinguished instance, when one of the most wonderful and noted of all the places on earth which has been thus deliberately set aside and solemnly dedicated for inviolate preservation is sought to be dismembered and destroyed at the instance of a single municipal corporation, would be to establish a precedent which would endanger the very foundation of our national-park system. If local interests can successfully assail and destroy the Nation's purpose in this instance, none of our national parks will be safe.

It is seldom that a bill is presented for the consideration of Congress in which so much both in substance and in principle is involved. So many issues not directly connected with the main proposition have been discussed and so much misunderstanding has been already exhibited with regard both to the

facts and principles that a detailed consideration of at least the more important of these seems necessary.

AN EMERGENCY CASE.

It is stated in support of this bill that San Francisco and adjacent cities are greatly in need of an additional water supply, and its immediate passage is demanded as an emergency measure in order to relieve distressing existing conditions.

It is admitted that the present water supply is insufficient and that an additional supply is greatly needed, but it is denied that the passage of this bill is intended to or can supply any immediate or pressing demand. The testimony is uncontradicted that it will take from 4 to 10 years to obtain water from the Hetch Hetchy reservoir. It is admitted that the near-by sources must be developed in any event, no matter where the permanent supply is obtained. Ultimately San Francisco must, and it should at once, develop its near-by sources of supply, which are amply sufficient to supply all the needs of its people for years to come. It is a mistaken and cruel policy to allow the people of the city to suffer for want of water in order that their suffering may be used as a ground to secure the passage of this bill, when its passage can not immediately aid them, when plenty of water to supply every demand can be obtained in a short time from near-by sources, and when these near-by sources must be developed whether this bill is passed or not.

None of the larger projects can be completed for years, and in all estimates made by the engineers of the city, by the Army board, and by others, it is proposed first to develop the near-by sources. The bill itself contemplates the delay, for it provides that the city shall have three years in which to file even the preliminary plans, while payments to the Government for the use of the franchise are not to commence for five years. It would be better, and probably more satisfactory to the city, to determine early where its permanent water supply is to be secured. But it is indefensible to delay the development of its near-by sources when its people are suffering. Neither is it justifiable under the circumstances to press Congress to speedy action on a proposition that can not relieve existing distress or affect conditions, except indirectly, for years to come.

The present population of San Francisco is 417,000. Its present water supply for municipal use is about 37,500,000 gallons daily, or 90 gallons per capita. It should have, on a liberal allowance, 130 gallons per capita, or a daily supply of 54,210,000 gallons. It needs, therefore, an additional supply now of 16,710,000 gallons.

The population of the bay cities, including San Francisco, is 773,000. Their present combined water supply is 85,000,000 gallons daily, or 110 gallons per capita. On a 130-gallon basis they need 100,000,000 gallons, or an additional amount of 15,000,000 gallons.

The Army board, making a conservative estimate, places the increase that can be obtained by developing near-by sources at 100,000,000 gallons daily. This is about 85,000,000 in excess of even the liberal estimate of 130 gallons per capita and is sufficient to supply the increasing demands of the people for years to come. Mr. Wadsworth, the engineer employed by the Army board, gives a certain increase of over 100,000,000 gallons, and a probable increase of 140,000,000 gallons. In other words, the present supply can be more than doubled by merely the development of the existing near-by sources.

IS IT NECESSARY TO GO TO THE SIERRAS?

Admitting that San Francisco will eventually need a larger water supply than can be obtained from near-by sources, we may consider where such permanent and further supply should be obtained. It is asserted by the city that in order to secure such a supply it must go to the Sierra Nevada Mountains.

I assume there can be no well-founded objection to the following postulates:

In obtaining its water supply San Francisco should exhaust near-by sources before going elsewhere.

It should obtain its supply from the Coast Range, if it can there obtain a desirable and adequate supply, before going to the Sierras.

It should obtain its supply from the Sacramento River, if it can obtain a desirable and adequate supply, before going to the Sierras.

In determining what is a desirable supply, a healthful, potable water, such as other cities use, should be considered, and not what might be thought most desirable by San Francisco.

In determining what is an adequate supply, a fairly justifiable estimate of future requirements should be made and not an exaggerated estimate as to supposed requirements at a remote date.

Regarding the development of its near-by sources of supply, it has already been shown that at least an increase of 100,000,000 gallons daily can be thus secured. Allowing 20,000,000 gallons to supply present deficiencies, which is a liberal estimate, there is a balance of at least 80,000,000 to credit on future demands.

A COAST-RANGE SUPPLY.

As is well known, San Francisco is situated on the west coast of California. Paralleling the west coast is the Coast Range of mountains, with a watershed directly to the Pacific Ocean. To the north of San Francisco this watershed is for the most part thickly wooded and very slightly developed. There is a heavy rainfall, and irrigation is unnecessary. East of the Coast Range, paralleling it, but with wide valleys intervening, extending for more than 500 miles north and south, is the Sierra-Nevada Range. The great central valley, composed of the eastern watershed of the Coast Range and the western watershed of the Sierras, is divided into two parts, its northern section being known as the Sacramento Valley, its southern as the Valley of the San Joaquin. A bare statement of the physical conditions is enough to demonstrate the proposition that San Francisco ought to go to the western watershed of the Coast Range, if it can there obtain an adequate and desirable supply.

EEL RIVER SOURCE OF SUPPLY.

A supply can be obtained from the headwaters of the Eel River, which rises in the Coast Range and flows northwest into the Pacific Ocean. The impounding watershed would be mostly within a national-forest reservation and would include a drainage area of 326 square miles. It could be easily kept under sanitary protection, would not need filtration, and would furnish a supply of pure, sweet mountain water in every way desirable. It would require a conduit of 115 miles, or 17 miles shorter than would be required for Hetch Hetchy, and is nearer than any Sierra source. Its cost is estimated at $24,000,000, or less than one-third the estimated cost of Hetch Hetchy, which is placed at $77,000,000. It would furnish 200,000,000 gallons or more daily.

This source was approved by Mr. H. H. Wadsworth, an eminent engineer of the United States Army, who was selected by the Army board to make investigation as to the different available water supplies for San Francisco. It never met with favor from the city, because it claimed that they needed an additional supply of 400,000,000 gallons, and for that reason the 200,000,000 gallons this source could supply would be insufficient.

AMOUNT NEEDED.

It will be necessary to consider whether San Francisco's demand for an additional water supply of 400,000,000 gallons daily is reasonable, and whether an inquiry as to available sources ought to be limited to those only which will furnish such an amount. In order to make a basis for such a demand it is claimed, first, that the supposed requirements of the year 2000 should be taken as the basis of the estimate. Such a remote date, nearly a century in the future, is unreasonable. It would be reasonable to make a fair estimate for future needs; but such a date is beyond any degree of fair consideration. Twenty-five years is an ordinary estimate; 50 years would be generous; 90 years is absurd.

It is estimated that at that date the bay cities, with a present population of about 700,000, will have added nearly 3,000,000 people, and so the city desires a supply that will furnish all the water 3,700,000 people may want in the year 2000—a tremendous leap into the future, but it is necessary in order to make a showing for the taking of Hetch Hetchy.

According to Mr. Percy V. Long, attorney for the city and county of San Francisco, the city now uses from thirty-seven to forty million gallons daily. And yet a city which last year used 40,000,000 gallons suddenly and vehemently demands that its supply be increased to 540,000,000 gallons. Suffering because of an inadequate supply, but on which it has voluntarily subsisted for years, it contends that its supply should be increased immediately to thirteen times its present volume.

In order to swell the demand to this enormous quantity it is estimated that 95,000,000 gallons daily will be needed for the irrigation of truck patches and vegetable gardens near the cities, and so that amount is added to the supposed requirements.

To add to the absurd injustice of this demand for water from Hetch Hetchy to irrigate lands near San Francisco it should be remembered that the waters from Hetch Hetchy are tributary to the San Joaquin Valley, where more than 200,000 acres of land are barren because of lack of water. Yet it is proposed to carry this water across the valley to which it belongs and for which it is suffering 142 miles to satisfy the demands of the truck growers and market gardeners of San Francisco.

If a 50-year period be taken as a reasonable basis of demand and a liberal estimate of 1,800,000 as the population at that time of the bay cities, with an allowance of 130 gallons per capita, there will be needed for municipal purposes 234,000,000 gallons daily. With their present supply developed to 134,000,000, as is admitted that it can be, there will be needed for even the remote period of 1963, 100,000,000 gallons additional supply, while the Eel River alone can supply double that amount.

But if the extravagant demands made by San Francisco for an additional supply of 400,000,000 gallons be admitted, the Coast Range can furnish it, and do so more cheaply than can be obtained by going to the Sierras.

By combining with the Eel River supply a supply from Putah Creek, which is nearer, and which will alone furnish 341,000,000 gallons daily, a supply could be obtained which would furnish daily 541,000,000 gallons. This would be enough to supply the most enthusiastic demands, and the total cost of the Eel River-Putah Creek system would be $53,000,000 as against $77,000,000 for Hetch Hetchy, a saving in favor of the Coast Range source of $24,000,000 for the city. Besides, this system could be fully completed in three years, while it is estimated by most engineers that it will require twice that time to complete the Hetch Hetchy system.

THE SACRAMENTO RIVER.

The Sacramento River rises in northern California and flows south between the Coast Range and the Sierra Nevada Mountains. It receives as a confluent the waters of the San Joaquin River, which rises in southern California and flows north between the Coast Range and the Sierras. Together these mountain streams turn westward after their union and empty into the bay on which San Francisco is situated. It is proposed to take the water necessary for the bay cities at a point on the Sacramento River near Rio Vista, where it is always free from sea water.

The advantages of this source of supply are that it can be developed to meet increasing demands; the supply will always be sufficient to meet any possible requirements; the quality of the water will be far above the average; it would require no reservoir; no national park would be invaded, no irrigation claims infringed upon, and no injury or harm done to anybody.

The cost of the Sacramento system is figured by the Army board as more than the Hetch Hetchy source. But an analysis of the estimate shows that, in fact, the initial cost is much cheaper, or only $52,000,000, while the cost of Hetch Hetchy is seventy-seven millions. The additional amount of the Army board estimate is made up by a theoretical capitalization of the cost of pumping and filtration spread over many years. The city objects to the consideration of this source, first, because it is a river supply. But most of the cities of the United States secure their water from rivers, and there is none of them which boasts of a stream so advantageous as the Sacramento. Itself a mountain stream, and swollen by other streams which receive their flow from melting snows on lofty mountain sides, it would be difficult to imagine a more desirable source of supply. The city also objects because the system will require filtration. Here again it should be remembered that nine-tenths of the cities of the United States are required to filter their water. It is held by many experts that perfect sanitation requires filtration, and that all water for domestic use, whatever its source, should be filtered.

It is therefore apparent that the contention of the city that in order to obtain a desirable and adequate supply it must go to the Sierra Nevada Mountains is not well founded. Its needs for many years to come can be satisfied by the development of its present near-by sources, and in case an additional supply should be now considered necessary, two such sources are available without going to the Sierras.

OTHER SOURCES OF SUPPLY.

If, in spite of the objections suggested, it be thought that San Francisco is justified in her demands for a water supply from the Sierras, the next inquiry should be to what part of the Sierras it should go.

The idea has been assiduously cultivated that Hetch Hetchy was the only available source for a water supply. This is so far from the truth that the effort merits ridicule. In fact, there is no city of its size in the United States which has open to it so many superior sources as San Francisco. The Army board, selected for the purpose, reports 13 as possible sources. They report 7 as practically available. They report 5 as fully adequate and available. Four of these, including the McCloud River, rising in Mount Shasta, are in the Sierras, and one which we have already considered, the Sacramento River. In its report to Secretary Fisher the board says:

The board is of the opinion that there are several sources of water supply that could be obtained and used by the city of San Francisco and adjacent communities to supplement the near-by supplies as necessity develops. From any one of these sources the water is sufficient in quantity, and is or can be made suitable in quality, while the engineering difficulties are not insurmountable. The determining factor is principally one of cost.

Hon. Herbert Parsons, in a report to Congress while he was a member, said:

San Francisco is in an enviable situation for water supply. It has all the Sierras with their mountain snows to draw upon. There are no less than 16 different systems.

In his testimony before the Senate committee Mr. James D. Phelan, formerly mayor of San Francisco, was asked:

You know, Mr. Phelan, that you could go out overnight anywhere along the Sierras and get an abundant supply of pure water for the city?

Yes—

Said Mr. Phelan—

by paying for it.

On this floor, in this debate, the advocates of the bill admit there are other sources. The author of the bill said, "There are a number of other available supplies." The distinguished Representative from San Francisco said, "There are four principal sources that could be utilized."

It is not to enable the suffering people of San Francisco to get water, but for the municipality to get it cheaply, that this bill is pressed. A bargain is sought, and the interests of all the people of the United States are to be sacrificed in order to enable San Francisco to have it. But even that sordid ground can not avail, for there is overwhelming testimony to prove that there are many other supplies available that can be obtained for much less money.

It is, however, believed by those who oppose the passage of this bill, and indeed it would seem by everybody not directly interested in its passage, that there are other and higher interests to be considered than saving some money for San Francisco.

SACRAMENTO AND SAN JOAQUIN VALLEYS.

If the Sierras are to be used as a source of water supply for San Francisco, either the valley of the Sacramento or that of the San Joaquin must be invaded for that purpose. A comparison of the valleys should be made, and their respective claims for protection should be considered before action is taken.

The valley of the Sacramento is the great northern central valley of California, and the valley of the San Joaquin is the great southern central valley of the State. These valleys open into each other, and together extend for more than 500 miles north and south within the State and between the Coast Range and the Sierras. According to the Geological Survey the floor of the Sacramento Valley is estimated at 4,250 square miles; that of the San Joaquin Valley at 11,500 square miles, or nearly three times as large. The rainfall in the Sacramento Valley is 20 inches a year; that of the San Joaquin but 10 inches, or only one-half as much. The total flow per annum from the Sacramento watershed is estimated at 24,500,000 acre-feet; that of the San Joaquin at 11,500,000 feet, or less than half. The water supply on an engineering basis of the Sacramento would be 8 feet covering the floor of the valley, while the depth in the San Joaquin Valley would be but 18 inches. It will be seen, therefore, that there is about six times as much water supply in the Sacramento as there is in the San Joaquin Valley.

Certainly under these circumstances San Francisco should go to the Sacramento Valley rather than to the valley of the San Joaquin, if it can do so. If it can be justified under any circumstances in taking water from a source remote and to which it can have but a secondary claim, it should go where the largest supply is to be found and where those who live nearer and have primary interests shall be least injured. It must be apparent from a mere statement of existing physical conditions that the larger valley with the smaller water supply should not be robbed of what it has if an ample and suitable supply can be obtained from another source without injury or loss to anyone.

THE M'CLOUD RIVER.

Fortunately there are ample and superior supplies to be had in the Sacramento watershed.

A source was examined and approved by the Army board, situated on the watershed of the beautiful McCloud River, which flows into the Sacramento. Its source would be amid the eternal snows and glaciers of Mt. Shasta. In every desirable requisite it is remarkable. The Army board reports it as "clear, cold, and palatable." A large part of the watershed lies within a national forest reserve. No reservoir or storage will be necessary, and it can furnish 770,000,000 gallons daily if needed. As Col. Biddle, speaking for the board, said:

There is plenty of water in the McCloud River for all needs * * * and the least flow is twice what San Francisco needs—

even on its extravagant 400,000,000 basis. The cost is estimated by the Army board at from $58,000,000 to $64,000,000.

Here is a source from which San Francisco can obtain all the water she even thinks she needs, as pure and desirable as any on earth, at a cost of $19,000,000 less than Hetch Hetchy, while the taking will not deprive anyone of water needed for irrigation or any other purpose, and by which no national park will be invaded, and no objects of great natural beauty destroyed.

The only objections which San Francisco can urge against this project are, first, that it will take a larger initial expenditure than Hetch Hetchy, and, figuring on a capitalization basis, the latter is considered cheaper. The second and probably the principal ground of objection is that the McCloud River source will furnish no water power, while the Hetch Hetchy will furnish 115,000 horsepower, which San Francisco can use and sell to her own advantage.

So this source is disparaged and set aside to satisfy a forced and fanciful economy and to enable San Francisco to experiment in municipal ownership and sell water power at a profit. Urged on Congress as a humanitarian proposition, as a sacrifice of objects of inestimable worth and surpassing beauty, necessary in order to save the lives of the women and children of a drought-stricken city, it is revealed as a deliberate destruction of a national treasure to carry out the mercenary schemes of city boomers for their own glory and self-interest.

The press reports that in the course of this bill's discussion an impressionable legislator, stirred by the city's pathetic appeals, impulsively declared he would rather be able to furnish a cup of pure water to a thirsty child than to see all the beautiful scenery on earth. Another, in a burst of impassioned sentimentality, exclaimed:

I would rather hear the laughing voice of a child relieved from the grasp of a water monopoly than the warble of all the song birds in Christendom.

It is only necessary, in order to relieve the tension if tender sensibilities are stirred by such outbursts, to recall the fact that if any thirsty child is suffering for a drink in San Francisco it should appeal to the men who have kept the city thirsty and dirty for years in order to make a false appeal to carry through this scheme. It should be further remembered that at any time it chose for 10 years past the city might have relieved itself from the grasp of the water monopoly, but that, instead, the dreaded octopus appears before Congress allied with the city and unites with it in asking Congress to pass this bill. It might further be suggested that if the fabulous child whose imaginary thirst evokes such intense sympathy is compelled to wait for five years until its suffering can be relieved by the procurement of water from Hetch Hetchy, its condition will be pitiable, indeed.

THE YUBA, AMERICAN, AND COSUMNES SOURCES.

But the McCloud River is by no means the only source in the Sacramento Valley from which San Francisco might secure its water supply. The Yuba, American, and Cosumnes Rivers could be used. The Army board reports that they are all of the same general nature—"They all rise in the high Sierras, and the quality of the water is excellent."

The Yuba River would furnish 164,000,000 gallons daily, and its cost is estimated at $61,000,000.

The American River will only furnish 105,000,000 gallons, and for that reason has been considered in connection with the Cosumnes and other combinations.

The Cosumnes can furnish 212,000,000 gallons. Combined with the American, 317,000,000 gallons could be obtained.

THE MOKELUMNE SOURCE.

The Mokelumne River is nearly at the dividing line between the valleys of the Sacramento and the San Joaquin. It, too, rises in the high Sierras, and the quality of the water is excellent. Its supposed capacity was 128,000,000 gallons, and for that reason it has been principally considered in connection with other sources. On this basis it has been combined with the American and Cosumnes and other sources north of it and with the Stanislaus, Cherry Creek, and Lake Eleanor sources to the south. As these sources adjoin each other several combinations are possible, and any amount needed may be secured, the quality being first class in all.

The Mokelumne River as a single source was not considered feasible by the Army board or by its chief engineer, Mr. Wadsworth, because on reports and estimates before them it was supposed it could not furnish more than 128,000,000 gallons daily. An order was made by the Interior Department at the time of the appointment of the Army board that the city should investigate and report to the board for its consideration all possible available sources. Investigation was made by engineers appointed by the city, and it was supposed that all their reports were presented to the board. It is now known, however, that one of the reports thus obtained, known as the Bartel report, was never submitted either to Mr. Wadsworth or to the board. It is significant that this report shows that the Mokelumne River source alone could furnish 432,000,000 gallons daily. When it is considered that this source is much nearer than Hetch Hetchy, and that the cost would be a great deal less, a sufficient reason why the city should not desire the Bartel report to receive consideration is shown.

LAKE ELEANOR AND CHERRY CREEK.

The bill provides for a triple source, or a combination of sources, viz, from the Hetch Hetchy Valley, the Lake Eleanor Basin, and the Cherry Valley. Lake Eleanor is a beautiful mountain lake about 9 miles long and 5 miles wide, situated in the northwest part of the Yosemite National Park. It could be utilized as a water supply without destroying its beauty. Cherry Valley is just outside the park, but is within the Stanislaus National Forest Reservation. It is estimated, principally on data furnished by the city, that the two sources combined would furnish 190,000,000 gallons daily. But much larger estimates are made. Mr. John P. Young, editor of the San Francisco Chronicle, who visited the sources with the officials and engineers of the city, says that Lake Eleanor alone would impound 39,000,000,000 gallons and furnish 250,000,000 gallons daily.

In the winter of 1909–10 Dr. George Otis Smith, Director of the Geological Survey, and two engineers of the Reclamation Service reported that Lake Eleanor was ample to meet all the city's prospective demands. Mr. Harrow, the engineer commissioned by the Society for the Preservation of National Parks, in a report showed that Lake Eleanor and Cherry Creek were sufficient to supply the city up to at least 1948.

In 1908 Hon. James A. Garfield, then Secretary of the Interior, made an executive order authorizing San Francisco to use the Lake Eleanor Basin and Hetch Hetchy Valley as sources for a water supply. But it was provided in the permit granted that the Lake Eleanor site should be developed to its full capacity first, and that Hetch Hetchy should be used only in the event that the Lake Eleanor supply should prove insufficient. At that time the city proposed to develop Lake Eleanor first. But the passion for Hetch Hetchy developed and when it was realized that in all probability under the terms of the Garfield permit Hetch Hetchy would never be reached—because Lake Eleanor would furnish all that San Francisco could use for municipal purposes—the city never availed itself of its privilege under the permit and suffered it to lapse. Then the plan was changed and it now proposes to develop Hetch Hetchy first and only go to Lake Eleanor and Cherry Valley when the demand shall warrant.

If any law is passed allowing under any circumstances the taking of Hetch Hetchy, it would be only fair and just that it should provide, as did the Garfield permit, that Hetch Hetchy should only be taken after the near-by supplies had been developed and after the Lake Eleanor and Cherry Valley sources had proven insufficient to supply the legitimate municipal demands of the bay cities.

COST.

It is not considered by those who oppose this measure that the taking of Hetch Hetchy can be justified merely because it is cheaper. Certainly the invasion of a national park, set aside forever as a possession of all the people to be handed down inviolate to the generations that are to follow, can not be justified because other projects will cost more.

But if because Hetch Hetchy is cheaper should be considered as a reason justifying its sacrifice the fact of a material difference should be clearly shown. In the review of other available sources it has been shown that the Eel River source, if considered sufficient, would cost less than one-third that of Hetch Hetchy. Combined with Putah Creek an ample supply could be obtained at a total cost of $53,000,000, or $24,000,000 less than Hetch Hetchy. The cost of securing a supply from the Sacramento River would be only $52,000,000, a still larger saving. The McCloud River source would cost but $61,000,000. The cost of the combined American and Cosumnes would be much less than Hetch Hetchy, as would a combination of the Cosumnes and Mokelumne. A combination of all three, the American, Cosumnes, and Mokelumne, would cost about the same. A combination of the Mokelumne, Lake Eleanor, and Cherry Creek would also cost about the same. The Mokelumne alone would cost much less than Hetch Hetchy, as would Lake Eleanor and Cherry Creek combined.

It is true that the Army board reports that Hetch Hetchy would cost $20,000,000 less than other sources, but in order to reach that conclusion all plans that will not furnish 400,000,000 gallons daily are eliminated. Besides, in considering, for instance, the Sacramento River project, although the actual cost is but $52,000,000, the cost of pumping and filtering is capitalized and figured as an element of the cost, although no cost of administration of Hetch Hetchy is considered. In estimating the cost of the McCloud River project the actual cost is but $58,000,000, or $19,000,000 less than Hetch Hetchy. But because the initial expenditure would be greater on the McCloud project, it is considered the cheaper. It should also be remembered that most of the cost estimates are based on data furnished by the city, which seems determined to force a favorable view of Hetch Hetchy. In any event it is certain San Francisco can obtain a permanent, adequate, and suitable water supply for much less than $77,000,000.

IRRIGATION IN THE SAN JOAQUIN VALLEY.

It was supposed that the promoters of this enterprise had satisfied the irrigation interests dependent on a water supply from the Tuolumne River. There are two large water districts, the Turlock and the Modesto. These districts through their agents secured certain concessions in the bill which the water users thought preserved their rights. They now claim that their agents did not act in good faith, that their interests are not properly protected in the bill, and they now desire to repudiate the agreement made for them. Both Senator WORKS and the chairman of the water users of the Modesto district say that 99 per cent of the water users now oppose the bill. Other protests have been filed.

But there are other interests to be considered besides those of the people now served in the Turlock and Modesto districts. As we have already seen, the San Joaquin Valley is a vast arid region with very little rainfall, but with a soil very responsive and productive under irrigation. Over 7,000,000 acres in extent, it will take all the water belonging to the valley to irrigate one-half of it. Even if the settlement made by San Francisco with the Turlock and Modesto people ought to stand, their agreement should not be controlling. If there are other districts that need it and other lands that could be rendered fruitful by it within the San Joaquin Valley, then the 400,000,000 gallons daily ought not to be diverted from the valley to which they belong and carried 142 miles to San Francisco.

The irrigible area of the Tuolumne River is about 450,000 acres. There are now under water in the Turlock and Modesto districts about 240,000 acres. This leaves about 210,000 acres yet to be developed. It is proposed to divert 400,000,000 gallons daily from the valley, which, if used for irrigation, could supply more than this 210,000 acres.

As between San Francisco and the home makers of the San Joaquin Valley, it is proposed to forever deprive over 200,000 acres of land and doom it to eternal sterility. It has been said that in the struggle for water the thirst of the people must prevail over the thirst of the land; but this saying is merely sententious; it is not sensible. The land is not crying for relief. It is satisfied to bask in sun-fed idleness forever. It is the desire of the people for bread, for homes, for a chance to add to the productive capacity of the world, for an opportunity to transform a desert into a garden—this is what should be considered. Each of the more than 200,000 acres that could be made fruitful with the water San Francisco wants can produce at least $100 of food products each year. Approximately the value to the valley to the State and to the world in food products would be over $20,000,000 a year, or more each year than San Francisco claims it can save by taking Hetch Hetchy rather than some other source.

This objection becomes even more forceful when it is understood that the irrigation of this additional land may be secured without an invasion of the national park and the destruction of Hetch Hetchy. The water can be impounded outside the park and lower down the river. The La Grange Dam and Reservoir, which now supplies the Turlock and Modesto districts and irrigates more than 240,000 acres, is on the Tuolumne River outside the park. Additional impounding dams in the foothills outside the park may be built to furnish water for the land not now included in those districts and the park be thus preserved.

Hon. Francis Burton Harrison in a letter addressed to the Secretary of the Interior suggested that a supply for San Francisco could be obtained without going into the park by building reservoirs below it between the Merced and Tuolumne Rivers. This proposition was submitted to the Army board for consideration, but was not approved because the water would require filtration for domestic use. But no such requirement would be necessary for irrigation. Secretary Fisher refused to permit the use of the park for the reason, among others, that he desired information as to whether "the use of Hetch Hetchy Valley as a reservoir site is necessary if the full flow of the Tuolumne is to be conserved." There has never been any showing that it was necessary. On the contrary, the evidence is strongly to the effect that practically all the water of the Tuolumne can be utilized for irrigation without invading the park and destroying Hetch Hetchy.

Mr. Frederick H. Newell, director of the Reclamation Service, in his testimony before the committee, was asked:

It would be feasible to store all this water for irrigation without a reservoir at Hetch Hetchy?

His answer was:

Yes, sir. From a financial point of view it is still an open question; from an engineering point of view it is feasible.

We may leave the financial question to the people who will need the water. Under the provisions of their State law even the largest irrigation projects may be handled. It is an all-sufficient answer to those who believe that Hetch Hetchy must be used anyway, to quote the highest authority to the effect that all the water from the Tuolumne may be used for irrigation by those who are best entitled to it and who need it most without destroying Hetch Hetchy.

OPPOSING INTERESTS.

It is claimed by the advocates of this bill that they have now satisfied all opposing interests except the "nature lovers." That they have made a strenuous effort in that direction is certainly true, but it is doubtful if they have entirely succeeded. They silenced the opposition of the present "monopoly" supplying the city by promising payment for its property if the Hetch Hetchy plan went through. They endeavored to satisfy the demands of those already using water from the Tuolumne source by placing in the bill everything they asked for. The result is that the bill is confused, uncertain, contradictory, verbose, indefinite, and impossible of administration. It raises and invites controversy between National and State powers. It is merely a conglomeration of everything suggested by any person or interest opposed to it and whose objection could be removed by inserting his or its pet project. A prominent advocate of the bill confessed:

There are bad things in the bill, but they were put there to get votes.

If there is any one thing on which the people of the Western States have hitherto insisted, it has been that each State should be allowed to control its interior waters in the interests of its own people. They have been particularly insistent that national laws and regulations should not be allowed to interfere with State control. Yet here is an attempt by act of Congress to determine and control rights of irrigation, to parcel out and fix by national law storage and flow, to apportion waters within the territory of the State among municipalities and water districts created and governed by State laws.

An idea of the significance of this seems to be dawning upon the consciousness of even the people of San Francisco, as shown by an editorial in one of their leading papers, of date September 12:

While we all desire and expect to get the Tuolumne water, it is not desirable that the bill shall be rushed through without a full and free discussion of the rights of the States. The water which we will need for the next few years will have to be got by the development of the Spring Valley property—

The present chief supply—

and we should make a very poor trade to surrender the rights of the State within its own boundaries in order to get glory for our municipal officials just as an election is coming on.

As the bill was originally introduced it settled the rights of the irrigation districts—

notwithstanding any general laws of the United States or of the State of California, or any general rules of property established by the courts.

This clause has been eliminated, but the provisions it was designed to protect still remain, and its language fitly describes the purpose of the bill.

In a report to Congress on a similar bill in 1909 Hon. F. W. MONDELL, Hon. SCOTT FERRIS, and six other members of the Public Lands Committee said regarding these provisions that they related—

to subjects not under the control of Congress and with regard to which it has no authority and ought not to attempt to legislate. The legislation is objectionable for the reasons above mentioned, which take it out of the category of legislation of doubtful propriety and expediency and place it in that of doubtful constitutionality and of unquestionably mischievous and dangerous character.

THE YOSEMITE NATIONAL PARK.

Having shown that this is not an emergency case, and that San Francisco can secure an ample and superior water supply elsewhere, that to take water from the San Joaquin Valley would be an act of gross injustice, an endeavor will be made to show what will be the results if this contemplated invasion of the Yosemite National Park and the destruction of the Hetch Hetchy Valley succeeds.

The Yosemite National Park is situated on the western slope of the Sierra Nevada Mountains near the center of the State of California. Its present boundaries were established in 1906 and embrace an area of 1,124 square miles, or 719,000 acres. It extends from the crest of the Sierras on the east to the foothills of the San Joaquin Valley on the west. It consists mainly of two watersheds—that of the Merced River, in which is situated the Yosemite Valley, and that of the Tuolumne River, in which is situated the Hetch Hetchy Valley. These watersheds are nearly equal in area, that of the Tuolumne being somewhat the larger. The rivers both flow westerly into the San Joaquin, separated by a spur of the Sierras. The section was first made known to white men in 1851. It was not made accessible until 1874. In 1864 Congress granted the Yosemite Valley to the State of California, which retained jurisdiction over it until 1906, when it receded it to the United States. The park was established by Congress in 1890.

The territory now embraced within the park boundaries was selected and set aside because it is a place of marvelous beauty and grandeur. There is nowhere in the world its counterpart, and nowhere else can be found a national park containing so much of varied beauty and wonder. It is a land not only of scenic wonders, but of marvelous climate. Prof. F. E. Matthes, of the United States Geological Survey, describes it as "a climate paralleled by that of few mountain regions elsewhere in the world. It has a climate of sunshine and serene skies, dry, but not too dry; in summer warm, but not uncomfortably warm; withal characterized by nights that are cool, even frosty at the higher levels. The winters are cold enough to insure a snowfall of 2 to 4 feet in the lowest valleys and to maintain perpetual ice fields and glaciers on the highest crests. One goes to the Yosemite region not merely to admire its cliffs and waterfalls, nor to walk through the aisles of its great forests, but to revel in the full enjoyment of these wonders in the pure invigorating air and the restful calm that reigns from day to day." The hotels are open all the year, and the park is becoming known as an attractive winter resort, frequented by those who enjoy winter sports, such as snowshoeing, tobogganing, and coasting.

So far only the southern half of the park, embracing the Merced watersheds and the Yosemite Valley, have been improved and made accessible by the Government. But it is expected that the northern half, the Tuolumne watershed with the Hetch Hetchy Valley, will soon be improved and made equally accessible. Indeed, the northern part of the park is thought by many to be the more wonderful and beautiful. It embraces not only the Hetch Hetchy Valley, which is the counterpart of the Yosemite, but also the Tuolumne Canyon, which is second only to the Grand Canyon of the Colorado, and the Tuolumne Meadows, an alpine valley without equal in beauty and scenic grandeur in America. Thus, of the four prominent objects of interest in the park, three are in the Tuolumne watershed and are so far practically undeveloped and inaccessible.

The Yosemite National Park is visited annually by a constantly increasing number of visitors, not only from this country but from all over the world. One hundred and fifty from Great Britain alone visited the park in 1912, while almost every other country was represented. It is regarded everywhere by civilized men as one of the greatest of the world's marvels. The Westminster Review said of it:

The Yosemite is the wonder not only of California, but of the world.

Ralph Waldo Emerson said:

It is the only place I ever found that came up to the brag.

These words of praise refer principally to the Yosemite Valley, and when it is understood that this valley, while of surpassing beauty, is only one of the many marvels of the park, that the park is one hundred times larger than the valley from which it derives its name, and throughout the entire area is a veritable wonderland of grandeur and beauty, something of its true value can be appreciated.

Of the park as a whole a recent writer gives this description:

Of this glorious range (the Sierras) the Yosemite National Park is a central section, 36 miles in length and 48 miles in breadth. The famous Yosemite Valley lies in the heart of it, and it includes the headwaters of the Tuolumne and Merced Rivers, two of the most songful streams in the world; innumerable lakes and waterfalls and smooth, silky lawns; the noblest forests and the loftiest granite domes; the deepest ice-sculptured canyons, the brightest crystalline pavements, and snowy mountains soaring into the sky twelve and thirteen thousand feet, arrayed in open ranks and spiry pinnacled groups partially separated by tremendous canyons and amphitheaters; gardens on their sunny brows, avalanches thundering down their long white slopes, cataracts roaring gray and foaming in the crooked rugged gorges, and glaciers in their shadowy recesses working in silence, slowly completing their sculpture; new-born lakes at their feet, blue and green, free, or incumbered with drifting icebergs like miniature Arctic Oceans, shining, sparkling, calm as stars.

Nowhere will you see the majestic operations of nature more clearly revealed beside the frailest, most gentle and peaceful things. Nearly all of the park is a profound solitude, yet it is full of charming company, full of God's thoughts, a peace of peace and rafety amid the most exalted grandeur and eager, enthusiastic action, a new song, a place of beginnings abounding in first lessons on life, mountain building, eternal, invincible, unbreakable order, with sermons in stones, storms, trees, flowers, and animals brim full of humanity.

AS A PRECEDENT.

To invade this national park, the possession of all the people of the Nation, to utterly destroy one of its chief objects of interest, and to practically transfer control and relinquish sovereignty over one-half of the entire area of the park to a municipality, is the object and purpose of this bill. The State of California relinquished its claim and trust to the Nation; but a city of that State is now demanding a recession to it of a territory fifty times as large, not to better carry out the purpose of its establishment, but to destroy it and transform it into a municipal utility.

Their position is simply this: The national parks are merely temporary sequestrations of natural objects of beauty which may be invaded and those natural objects of beauty destroyed whenever any municipality situated near enough to use them desires to appropriate them to its own use and benefit. In this case necessity can not be urged as a reason—only cheapness. So that by the passage of this bill it will be established as a precedent that whenever any municipality situated within appropriating distance from a national park finds it can get water and power which it may desire for municipal purposes, to sell to others, to run its street cars, or to irrigate its adjacent truck patches cheaper from a national park than from elsewhere, Congress should give it such privilege.

Is it supposed that any national park is safe if this bill becomes a law? Its passage will be an invitation for the invasion of every national park in the country. What would be thought of a proposition on the part of an individual, or even a school, or a hospital to invade one of our city parks and appropriate it to its own use? Would not the answer be, This can not be done, for the park is the property of all the people of the city, and can not be despoiled for the advantage of only a part? Is it contended that our city parks are to be considered more sacred and of higher value than our national parks? Yoo Yosemite National Park was set aside for a great pleasure ground, for a national sanatorium, for the delight, the refreshment, the recuperation of all the people of the United States. This we now hold as a sacred trust for the purposes for which it was dedicated and set aside by the Nation. It would be a gross, a base violation of our duties as trustees for the people to surrender this national trust to satisfy a selfish, mercenary, utterly unjustifiable demand.

If this action be taken upon the ground of the higher privilege of municipal demand, how will it be possible to protect any national park? What argument used to destroy Hetch Hetchy might not with equal force be urged to dam and destroy Yosemite? Will not a further demand in the near future be presented to place a dam below El Capitan, and thus make the Yosemite Valley a water tank for somebody? As they have been formed by nature twin wonders and miracles of beauty, so would Yosemite and Hetch Hetchy become twin sacrifices to exploiters and boomers. If human greed can be thus confused with human need, and a plea for the destruction of that which is most beautiful and elevating in nature be disguised as a plea for humanity, then, indeed, may we despair of both our intelligence and our civilization.

THE HETCH HETCHY VALLEY.

There has been a strenuous and persistent attempt to depreciate and belittle the beauty and value of the Hetch Hetchy Valley. It is called a "barren canyon," a "craggy, inaccessible gorge," a "remote swamp infested with mosquitoes," of no particular value. It will be worth while to see just how much truth there is in these disparaging descriptions. They are made for the most part by those who have never visited the valley. We will contrast them with those who have seen it, some of them many times, and whose judgment is worthy of respect.

Mr. J. S. Chase, an English traveler and writer of note, in his book Yosemite Trails, thus describes the valley:

In general features the Hetch Hetchy is a remarkable duplication of the Yosemite. • • • There are the same clean-drawn, dome-like outlines, the same quiet beauty of winding river, the same level meadow floor, dotted with stately trees and sprinkled thickly with flowers.

Harriet Monroe, our American poet and essayist, says of it:

It is a garden of Paradise, this valley; a lesser Yosemite, but very different, with an infinitely charming individuality of its own; smaller but more compact, less grand but not less beautiful. In its wonderful forest growth, of great variety and magnificent development, it surpasses Yosemite Valley itself.

Mr. John P. Young, editor of the San Francisco Chronicle, thus describes it:

It is about 5 miles in length between the points where the river enters the valley from the Grand Canyon of the Tuolumne to its outlet through a gorge at its western extremity, and varies in width from a mile where it is broadest to less than 300 yards in its narrowest part. • • • Except at the places where the river enters and makes its exit the valley is inclosed by ridges, bold walls and peaks that rise to a height of 6,000 feet above the level of the sea, or more than 2,000 feet above the level of the valley. • • • The Tuolumne by no means loses its beauty when it emerges from its rocky gorge to continue its course through the valley. If possible, it adds to its charms. In the summer time it meanders peacefully through the verdant meadows, hugging the base of the walls which inclose Hetch Hetchy on the north, reflecting its peaks and rocks in innumerable places. Mirror Lake, of the Yosemite, is repeated a hundred times in the reaches of this wonderful stream, whose tree-fringed banks are pictured on its glassy surface, while its pellucid depths reveal its pebbly bottom.

John Muir, who has done more, perhaps, than any other one man to preserve and make known the wonder and beauty of our national domain, says of Hetch Hetchy:

It is a wonderfully exact counterpart of the great Yosemite, not only in its crystal river and sublime rocks and waterfalls, but in the gardens, groves, and meadows of its flowery park-like floor. The walls of both are gray granite, rise abruptly out of the flowery grass and groves, are sculptured in the same style, and in both every rock is a glacial monument. • • • The Tueculata waterfall is the most graceful I have ever seen. It excels even the Bridal Veil of the Yosemite both in height and fineness of fairy, airy beauty and behavior. • • • The Wapama waterfall is another marvel. It has a greater volume than the Yosemite Falls, is about 1,700 feet in height, and appears to be nearly vertical. It comes from a jagged, shadowy gorge roaring and thundering, pounding its way with the weight and energy of an avalanche. • • • The Hetch Hetchy Valley is a grand landscape garden, one of nature's rarest and most precious of mountain mansions.

Prof. T. E. Matthes, of the Geological Survey, in a scientific description of the Yosemite and Hetch Hetchy Valleys, says:

These two valleys • • • possess a distinctive, if not exceptional, character that places them in a category by themselves. They may be described as deep-hewn, clean-cut moats bordered by precipitous rock walls that sharply trench across the surface of the uplands and spring abruptly from broad, level, grassy floors. Waterfalls and cascades of great height and beauty leap down into both chasms from the hanging valleys of the upland, and the cliffs themselves are sculptured into a variety of bold and picturesque forms such as are scarcely known elsewhere.

The floor of the Yosemite has an elevation of 3,900 feet, that of the Hetch Hetchy 3,600 feet. It is a sister of Yosemite. It has a similar location. What the Yosemite is to the southern or Merced half of the park, Hetch Hetchy is to the northern or Tuolumne half. It has a similar origin and has similar characteristics, yet with such differences as nature, prodigal with her power to create, delights to produce.

Many artists think Hetch Hetchy more beautiful than Yosemite. It has a more exquisite adjustment of grandeur and beauty, a more delicate shading of color, a firmer outline of boundary. It has more beautiful floral displays, disclosing new coloring with the changing seasons. It has a more beautiful forestation, being in such regard a veritable wonderland of varied and beautiful groves and forests. Its waterfalls are not so numerous, but two of them excel even those of the Yosemite in impressive beauty and grandeur.

Frederick Law Olmstead, the great landscape authority, says the beauty of such valleys consists chiefly in the contrast between the grandeur of the lofty walls and the equisite sylvan character of the floors of the valley. This is impossible to create by any skill that man can use. And there are but few such places in the world. In fact, it seems to be admitted that the Yosemite in these rare qualities is the most beautiful and perfect in the world. If this be true, then Hetch Hetchy is second, closely approaching it in surpassing loveliness, and there is no third.

DEPRECIATION.

It is this valley, this earthly paradise, this elsewhere unmatchable beauty spot, that San Francisco seeks to appropriate and destroy. And this wanton act of vandalism is sought to be justified by disparagement. This beautiful vale, sprinkled with flowers, shaded by groves, made musical by the crystal rippling of its smiling river, is called a "barren canyon," a "rocky gorge." It is "remote." But so was Yosemite until roads made it near, as they will Hetch Hetchy if it is not destroyed. It is "inaccessible." But so was Yosemite until the Government improved it, as it will Hetch Hetchy. A road of but 9 miles in length and an expenditure of $10,000 will make it, too, accessible. It is "swampy" in places. But so was Yosemite until it was drained and used. "Mosquitoes are a fearful pest." But so were they in Yosemite until the Government drove them out. Mr. E. T. Parsons, who has spent many seasons in the park, says:

I have experienced attacks of mosquitoes in the Bridal Veil Meadows, at the lower end of Yosemite Valley, that would put the Hetch Hetchy cohorts to shame.

But more than 10,000 persons now visit the Yosemite annually, the number is increasing every year, and the mosquitoes have disappeared.

It is said that in the spring the valley is flooded. But so are all mountain valleys. So is the valley of the Yosemite; so are the valleys of the Yellowstone National Park; so are the valleys of the Glacial National Park. These flood conditions are subject to control so as not to interfere with its usefulness when drainage and other improvements are carried out.

It is by such ridiculous arguments as these that the taking of Hetch Hetchy is sought to be justified.

"A BEAUTIFUL LAKE."

The proponents of this bill seek to convey the impression, first, that the Hetch Hetchy Valley will not be destroyed by damming it and, second, that it will add to the beauty of the park to thus create "a beautiful lake."

The impression is created that to dam Hetch Hetchy will cover but a portion of the valley and not necessarily destroy it as such. That impression is erroneous. The valley is small. Its level floor is only about 3½ miles long by three-fourths of a mile wide. Its walls are precipitous and rise to a great height sheer from the valley floor. It is proposed to build a dam 325 feet high. The water in the reservoir, when it is full, will be 7 miles long on its surface, 1½ miles wide, and 175 feet or more deep. There will be no level places on the steep mountain sides to view the remains. The reservoir can be seen from the mountain tops, 2,000 feet above, but the view will not be very satisfying. It was first proposed by the city to cut a scenic roadway entirely around the reservoir. But the engineering difficulties of cutting a roadway from the almost perpendicular granite walls surrounding the valley were so great and the cost so heavy that the project was abandoned, and now the city only binds itself to build a "road or trail" on the north side of the reservoir. It is scarcely necessary to say that a "trail" or bridle path will be of little practical value to anyone.

The "beautiful lake" idea seems to have removed many objections. Imaginary pictures of the valley transformed into a beautiful lake have been prepared and are being exhibited as arguments for the city's plan. It is such a nice thing to have a lake in a park and is really so expected that the proposition of San Francisco to furnish one with which to decorate the national park seems not only the proper thing but really a generous act worthy of praise and meriting instant acceptance with thanks. But the national park is full of beautiful lakes already. John Muir says there are no less than 250 within the park boundaries of sufficient size to be noted and named. There is no need of another lake in the park.

And this is not to be and can not be a lake. It is a reservoir, a "catch basin," as the chairman of the committee aptly called it. It has been properly termed a cistern, and such it would be, the rim of which would rise 2,000 feet from its contents. An artificial lake, which can be maintained at a comparatively equal fill, can be made and kept attractive in case natural lakes can not be found. But a reservoir which will be filled full to its capacity by the spring floods, which are to be stored and emptied through the long, dry, hot season until its flood store is exhausted, is not and can not be made attractive. When full the Hetch Hetchy reservoir would be 7 miles long, 1½ miles wide, and 175 feet deep. When the minimum was reached it would be an almost stagnant pond, less than 2 miles long and half a mile wide. In the hot and dry months, when the park would be most visited, it would be for the most part a ghastly mud patch, reeking with the dirty ooze of the tank, denuded of verdure, disgusting, horrible—a thing to be avoided rather than sought.

The author of the bill says:

It makes a beauty spot of what is a barren canyon to-day.

John Muir says:

As well say damming New York's Central Park would enhance its beauty.

Of the lake idea, he says:

The beautiful lake, forsooth, would be only an eyesore, a dismal blot on the landscape. The Hetch Hetchy dam lake would be but a rough imitation of a natural lake for a few of the spring months, an open mountain sepulcher the others. • • • Dam Hetch Hetchy! As well dam for water tanks the people's cathedrals and churches, for no holier temple has ever been consecrated by the heart of man.

Prof. William F. Bade, of Berkeley, Cal., says:

There are scores of finer lakes in the park than this drowned valley will make, while Hetch Hetchy and Yosemite are the only mountain temples of their kind in America.

To dam the valley, he says, will make it a "monstrous municipal cistern."

Col. Biddle, chairman of the Army board, testifying for the city, was asked if the damming of Hetch Hetchy would "destroy the whole park, as assumed by some people?" His reply

was, "No, sir; it would not destroy the whole park, although it would destroy a valley which is very beautiful."

There can be no disguising the fact; it would destroy the valley. If the sacrifice were necessary, it could be made. But certainly nothing less than absolute necessity would justify it.

Mr. Pinchot, also testifying for the city, speaking of the preservation of the park, said:

> Here is one of the great wonders of the world, and I would leave it just as it is, so far as possible, in the Yosemite National Park.

That is the generally accepted idea of intelligent people nowadays. Few indeed can be found who would destroy the natural when it can be preserved to substitute the artificial.

PRESERVATION OF HETCH HETCHY NECESSARY FOR PARK.

It is not alone because of the destruction of the beautiful Hetch Hetchy Valley that protest is made, but because its taking will almost make of no use to the people one-half of the entire park. Just as the Yosemite is the gateway, the entrance court, the base of observation, and the center of attraction around which all the southern half of the park clusters and gravitates, so is the Hetch Hetchy Valley the portal and center from which must radiate all the interest and value of the northern half of the park. Hetch Hetchy is even more necessary and important in that regard than Yosemite, because there are more objects of interest outside the valley in the northern than in the southern part and because Hetch Hetchy is even more necessary as a condition to their observation and enjoyment.

As we have already seen, the Yosemite National Park comprises two watersheds. The Tuolumne River forms the northern and the Merced the southern, and each contains about one-half the entire area of the park, or about 500 square miles. The Yosemite is the only considerable valley in the southern part and is situated near the lower or western boundary and is the entrance and base of the southern part of the park. To it has come the railway, and from it radiate the roads and trails which make accessible and available the many objects of interest in the southern part of the park. In the valley are the hotels, the coach-line stations, the post, telegraph, and telephone offices, and the supply stores. More than 10,000 visit it each year, and the number is increasing rapidly. The Government superintendent in his last report strongly recommends the building of additional hotels and more roads and trails to answer the rapidly growing demand.

As yet the Government has not reached in its course of improvement the northern part of the park, but it is intended to do so very soon. It is needed now. The demand that its wonders and beauties shall be made available is increasing. There are 500 square miles in the southern part, and yet the officials report that it is crowded in the season. Why is this? Because, while the territory is large, it is a mountain park where valleys are few, and so available stopping and camping and resting places are few. This makes the demand for the opening and improvement of the northern part, and this demand does not come from the despised "nature lovers" alone. It comes from the tired workers of the hot and dry valleys, from the nerve-wrecked toilers of the cities, from the travelers from the lands beyond the sea who have heard of the marvels of this wonderland and desire to see and know them.

And that is one of the reasons why the Hetch Hetchy Valley is so valuable and should be preserved. Just as the Yosemite Valley is the gateway to the southern part of the park, so is Hetch Hetchy the gateway to the northern part. It, too, is near the lower western boundary. It, too, is the only practical portal and base and center for the entire northern part of the park. Here in this valley is the only practical location for hotels, stations, and offices. From this valley should radiate and center the roads and trails to make accessible the wonders of the northern part of the park. Just as from the Yosemite Valley Mount Star King, the Tenaya Lake and Canyon, Wawona, and the Big Trees, and Cathedral Park are made accessible and available, so would Lakes Eleanor, Vernon, and Tilden, the Tiltill Valley, the Tuolumne Canyon, the Matterhorn, the Tuolumne Meadows and the circle of great mountain peaks surrounding it, and the hundreds of other special objects of interest and beauty be made available from Hetch Hetchy. But this can not be done if it is converted into a reservoir.

Just as the development of the Valley of the Merced—named Yosemite—was first necessary to make a base for bringing all its related and adjacent wonders and beauties under observation and availability, so will the development and improvement of the Valley of the Tuolumne—named Hetch Hetchy—be first necessary to make a base for bringing all the more than 500 square miles of adjacent and related wonder and beauties within the reach of the people. And just as to dam and destroy the Yosemite would make the entire southern part of the park of little interest or use, so would the destruction of Hetch Hetchy make the entire northern part of the park of little use or benefit.

WHAT SANITARY CONTROL MEANS.

But not only is the northern part of the park made unavailable by reason of the importance of Hetch Hetchy Valley as a center and base, but the entire northern part of the park, the entire 500 square miles which form the watershed of the Tuolumne, and which is tributary to the Hetch Hetchy Valley, is made a sanitary district of San Francisco, and that city is given sanitary control of all the northern half of the national park. Restrictions are made as to the use of "any reservoir or stream" and over camps and hotels "within the watershed."

In the rules proposed for the sanitation of the watershed by Mr. Alen Hazen and Mr. George C. Whipple, the distinguished sanitary experts, provision was made that no refuse or garbage should be placed in the waters of any reservoir or stream, or within 50 feet thereof. This was the provision of the bill when originally introduced, when it was considered by the Government officials and approved by the committee. In some way the requirement has been changed, and instead of 50 feet the distance is made 300 feet. The effect of this is to make the great Tuolumne Canyon impossible of exploration or observation. It prohibits the use of the greater part of the Tuolumne Meadows. It makes it practically impossible to explore or tour the entire Tuolumne watershed, over 500 square miles in extent, or the larger part of the entire national park. The reason for this is that at most points the walls of the wonderful Tuolumne Canyon are less than 300 feet from the river. In the beautiful Alpine valley, known as the Tuolumne Meadows, the camping places and outfitting stations are near the streams. In the entire northern part of the park the valleys are narrow and there are very few level places that can be found within them 300 feet from a stream. Nearly all the little lakes—and there are hundreds of them—are directly or indirectly the sources of streams which flow into the Tuolumne River, and thence into Hetch Hetchy Valley; and all must be subject to these sanitary regulations.

It is supposed by many that the Hetch Hetchy Valley alone is affected by this bill. This is, indeed, a great mistake. Sanitary supervision is equivalent to control. In effect the passage of this bill will transfer the jurisdiction of the northern half of the park from the United States to the city of San Francisco. Hereafter the southern half of the park will be administered for park purposes, and within its precincts the people will be invited. But the northern part of the park will be conserved as a water supply for San Francisco, and within that watershed the people will not be welcome. In whatever degree the United States shall assist in the policing and protection of that part of the park, it will be primarily in the interest of San Francisco to enforce sanitary regulations to protect its water supply.

San Francisco assumes the burden of enforcing its sanitary regulations. In what measure and to what extent it is proposed that the city shall assume control over the park for that purpose the bill does not make clear. But surely it could not be thought that San Francisco desires to impose on the General Government the protection of its water supply. Assuming that nothing so unreasonable is proposed, then it follows that San Francisco must police the entire watershed, embracing a territory of 500 square miles. Assuming also, as the city is so anxious to claim, that the people will go into the northern part of the park after Hetch Hetchy is dammed, it follows as a necessary consequence that it will require an army of policemen to protect it. A national park is vastly different from a national forest reserve. If San Francisco should go to a national forest reserve, as did Los Angeles, to either the Eel River, McCloud River, or Mokelumne, or others where their source of supply would be within forest reserves, protection would be an easy matter, for within a forest reserve the people are not invited. The policy is exclusion. But within a national park the exact opposite is true. The policy is inducement, invitation, even solicitation. Within a national forest reserve the less it is used the more it serves the object of its establishment. With a national park, the more it is used the more it serves the purpose for which it was set aside.

Keeping in mind that San Francisco is to spend millions in securing this water supply, what must be her policy? Will it be to encourage, to invite the people to come within the watershed and contaminate its water supply? On the contrary, will not its interests demand a policy of exclusion? By the mere manner in which the city shall enforce its sanitary provisions it can exclude visitors from the northern part of the park. The people will not go for pleasure where it is made unpleasant for them. They will not go for rest where constant nagging is probable.

It must seem evident that the purpose of a water supply is utterly inconsistent with that of a national park. It will be continually and increasingly to the interest of San Francisco to keep people away from the watershed. Most experts hold that it is necessary either to have entire exclusion or else filtration to insure sanitation. The people of Portland, Oreg., would not be satisfied with anything less than the absolute exclusion of everybody from the watershed of their Bull Run water supply, and so they secured from Congress an act to that effect.

If an epidemic of typhoid should occur in San Francisco it would be at once attributed to its unprotected water supply and there would come a clamor for exclusion. It is claimed that the reservoir may be used for boating and the mountains and waterfalls around Hetch Hetchy observed from motor boats and canoes. Of course there is no provision in the bill to that effect. The unauthorized statement is only intended for pictorial purposes. Imagine what the people of San Francisco would say and do if they were informed that banana peels and cigar stumps were being thrown into its unfiltered water supply.

It is true that the bill provides that no further restrictions shall be demanded, and if further protection is needed it will filter. But its objection to filtration now is the cost. The city claims it will cost $10,500,000 to filter its water supply. Which will be the cheaper for it, filtration or exclusion? San Francisco will demand exclusion in the name of the ten millions it will save, in the name of the women and children who are dying because Congress does not listen to their cry, in the interest of the conservation of human life and the general cause of humanity. They will say then, just as they say now, "Your park is big enough without it. You have got the Yosemite Valley and what do you want with more? Nobody will object except a few 'nature lovers,' and there is only a few of them, anyway."

And there will be stronger reasons then existing for the passage of an act of exclusion than now exists for the passage of this act. It will be argued that Congress must have known that exclusion would finally be demanded. To think of granting a tract of land for a water supply and then expecting to use it as a pleasure resort subject to constant danger of infection will be said to be ridiculous. With this view, Mr. J. Horace McFarland, president of the American Civic Association, testified: "The whole valley which is tributary to Hetch Hetchy, every single foot of it, must be given to San Francisco," unless Congress means to "give away a means of poisoning San Francisco."

It is not an unreasonable apprehension nor an unjustifiable statement which is made by John Muir and others that the passage of this bill means the absolute destruction for park purposes of one-half the national park. If the watershed is protected by the city under the provisions of this bill, or if exclusion is hereafter secured, in either case its usefulness for park purposes is destroyed. Ex-Mayor Phelan says San Francisco will do the park "no violence. She will treat it fairly." Imagine some future Mayor Schmidt, or Boss Ruef, or sand-lot politicians through their superintendent and employees administering this beautiful trust! Their characteristic hunger for the quiet of the forest and the grandeur of the mountains, their appreciation and love of the beautiful, will indicate what is meant by municipalizing Yosemite. Even under present conditions an indication of the attitude of the city authorities and of what may be expected of them is shown by the change in the bill by which an exclusion of 50 feet, deemed ample by their own sanitary experts, is changed to 300 feet, presumably to better please the city.

WHAT GOES WITH HETCH HETCHY.

It will not be without value to mention some of the other wonders and beauties besides Hetch Hetchy which the people will surrender to San Francisco if this bill is passed.

The Tuolumne Canyon deserves to be ranked among the greatest natural wonders of the earth, say naturalists who have explored it. It is second only in size and grandeur to the Grand Canyon of the Colorado, and in some respects excels it. It can be made more easily observable, for the Colorado canyon is in some places 15 miles wide, while this is but 1¼. The canyon is only about 22 miles long, but the fall is nearly 5,200 feet. In other words, it falls a mile in a continuous succession of cascades and cataracts. For a long time it was considered impassable, and now is only traversed with difficulty, requiring about four days for the trip. Yet it can be made easily passable unless the blocking of its lower outlet is accomplished by the damming of Hetch Hetchy. In places the walls rise in terraced or almost vertical precipices to heights of 5,000 feet.

Joseph Clement, regimental chaplain of the United States Army, says that to dam Hetch Hetchy would shut out the public from the canyon through which the Government contemplates building a trail when it reaches improvements in that portion of the park. Describing this absolutely unique and almost unknown attraction of the park, he says:

> The wonders of the canyon can not be described to others in words. We looked up at peaks 5,000 feet in height and saw some of the most beautiful waterfalls and cascades in the world. Stella Falls, Le Conte Falls, and Muir Canyon are in the midst of scenery which surpasses anything in the Yosemite or any or all of the places in that wonderful park.

At the entrance or upper end of this canyon is the splendid alpine valley, known as the Tuolumne Meadows. The term "meadows," bestowed by hunters and prospectors who first christened it, does not indicate its real nature. It is a beautiful mountain valley in which the Tuolumne receives its hundred tributaries before it plunges into the canyon and through it to Hetch Hetchy. It lies high up among the crests of the Sierras at an altitude of 8,500 feet, or nearly a mile higher than the floor of the Yosemite and Hetch Hetchy Valleys. Down from the heights of Mount Dana, Lyell, Ritter, Conness, and dozens of other lordly peaks, fed by their thousand glaciers and flooded by their eternal snows, come these mountain torrents through deep gorges carved through solid granite, leaping precipices, with shouts of thunderous laughter or singing lullabys among the pines and ferns. Threading their way quietly after they have reached the meadows through fields of lush grass, among flowery meads which extend for miles, through fragrant groves of tamarack and fir and pine, they join the Tuolumne on its mad excursion through the canyon.

This valley is not only a spacious region of enchantment and delight, but it is the only resting place and vantage ground to see and explore the great mountains surrounding it. It is the only available camping ground and outfitting station in this region. It is crossed by important trails leading to Mona Pass, to Donohue Pass, to Levining Pass, to Tuolumne Pass, to Tuolumne Canyon, and to the Yosemite by the Sunrise Trail and the Tioga Road. It is the point from which to view and visit Cathedral Peak, Unicorn, Rafferty, McClure, Lyell, the Kuna Crest, Mount Gibbs, Dana, and Conness—in short, the greatest and most glorious mountains in the park.

Mr. E. T. Parsons, a frequent visitor, says of it:

> For 20 miles the verdant meadows studded with countless flowers follow the sparkling river. Groves of beautiful trees are scattered here and there, as if for the express purpose of making ideal camping grounds. Trout are abundant, the pasture is the best in the Sierras, the delicious mineral springs near Lamberts Dome are alone enough attraction for thousands of visitors. Above all, the clear, bright, unbroken sunshine of a California summer, the invigorating air, cooled by the myriads of snowy peaks surrounding, makes it a paradise for man.

And this, too, is to be surrendered to the supervision and control of San Francisco.

But these by no means exhaust the list of the attractions of the northern part of the park. Mr. Allen Chamberlain, in an article in the Outlook magazine, says:

> I do not hesitate to declare that the scenic beauty of the country north of Hetch Hetchy is fit to rank with the finest mountain scenery in the country. Once the public is allowed a glimpse into the Tuolumne River watershed, with its sunny and hospitable meadows, its wide-spreading forests, its great snow peaks, innumerable lovely lakes, and majestic canyons the clamor for its development will be irresistible.

"NATURE LOVERS."

I presume these words of description and praise can have but little effect on the advocates of this bill. In every speech and reference they have nothing but contempt and scorn for the "nature lovers." And yet the most serene intelligences and greatest minds the world has ever known have been "nature lovers." Indeed, it may be truly said that there is no truer test of that which is most elevated and noble in humanity than the appreciation and love of nature.

In a plea for the enlargement and preservation of our national parks, Mr. James Bryce, while he was yet ambassador, said:

> The love of nature is the very simplest and best of those pleasures the power of enjoying which has been implanted in us. * * * A taste for natural beauty is increasing, and, as we hope, will go on increasing. The places of scenic beauty do not increase, but, on the contrary, are in danger of being reduced in number and diminished in quantity. There is no better service we can render to the masses of the people than to preserve for them wide spaces of fine scenery for their delight. * * * Let us think of the future. We are trustees of the future. We are not here for ourselves alone. All these gifts were not given us to be used by our generation or with the thought of one generation only before our minds. We are the heirs of those who have gone before and charged with a duty to those who come after, and there is no duty which seems clearer or higher than that of handing on to them undiminished facilities for the enjoyment of some of the best gifts that the Creator has seen fit to bestow upon His children.

It is not the esthete or the dilettante who really loves nature. Neither is beauty hunger confined to the rich and cultivated. It is shown in the modest window garden or the broken cups of the poor where a few geranium slips are grown and watched with loving care. It is not because of the demand of the rich that every city in the land is building spacious city parks and botanical gardens. It is because of the demand for fresh air, for the welcome shade, for the green grass and the open spaces, and an uninterrupted view of the sky and the stars, that comes from the poor. The nerve-wrecked worker in the clanging factories, the tired and weary seamstress from the tenement shops,

the sick and suffering children whose eyes brighten at sight of a flower—these are the real "nature lovers."

Indeed, not to love the beauty of the sky and sea, of forest and flower, is to be defective or deformed. The highest types of humanity are those who stand nearest nature and love her most, who open their eyes to her beauty and their hearts to her ennobling influence. It was Emerson who said, "Not in nature, but in man is all the beauty and worth he sees"—that is, the beauty and worth in nature can not be known by those souls which are not large enough to contain them.

Were it not for our increasing intelligence and our growing appreciation of the sublime and the beautiful we should not have established our national parks. We have realized their use and value in the generation in which we live, and we have realized of what inestimable worth they will be to the generations yet to come. "A thing of beauty is a joy forever," saug Keats, and the verse has sunk so deeply into the consciousness of the world that it has become a proverb for all peoples. In what supreme measure is the saying true in this case. As the years go on, as intelligence increases, as civilization advances, as man's appreciation and love of the sublime and beautiful enlarges, this park preserved as God made it will be indeed "a joy forever."

Really, gentlemen who sneer at "nature lovers" do not mean what their disparagement might imply. They are all themselves "nature lovers." All men not congenitally defective are. Even the savage, without understanding his impression, looks with pleasure on a beautiful landscape. Exactly in the measure in which intelligence is developed and civilization advances does this appreciation and love increase. The man or woman whose broad culture and enlightened humanitarianism takes the most exalted form seeks most and loves best "communion with her visible form."

THE HIGHEST CONSERVATION.

It is strongly urged that the highest conservation is use, and that domestic use is first to be considered. It is asserted in every form of phrase that to sacrifice utility for beauty is merely an effeminate, sentimental view. Every statement and proposition of this kind made could be admitted and still San Francisco could not be justified in asking the Government to sacrifice Hetch Hetchy. The argument has no weight or force unless the alternative exists—either the sacrifice of Hetch Hetchy or of human life in San Francisco. But no such alternative exists. San Francisco is not required to go to Hetch Hetchy or suffer for water; there are half a dozen other places to which it can go. It is not a case of dire necessity, requiring the sacrifice of one of the most wonderful of nature's masterpieces in order to save human life. What is really asked is to sacrifice the priceless marvel to save San Francisco some money. To Congress the proposition is, Will we allow an invasion of a national park, a phenomenal natural treasure house and one of the few wonders of the world, in order—not to relieve San Francisco's distress, but to save it a few dollars?

There are many who support this bill in the sincere belief that at some time Hetch Hetchy must be dammed and used by somebody, and that we might as well dispose of it now as later.

But it should be remembered that the Nation has set aside but few of such places for preservation—certainly no more than a reasonable policy demands. There are many available water and power sites on Government lands and within national-forest reserves against the proper use of which there can be no objection. But to thus use a national park is to utterly destroy its usefulness as such, and there is not another Hetch Hetchy in the land or in the world.

It should also be remembered that the same reasons would justify the damming and destruction of the Yosemite Valley and, in fact, all valleys in all our parks. It certainly can not be necessary to destroy all the beautiful things in the world on the plea that they must be utilized. Rather should it be recognized that such a definition of utility is too narrow. Dishwashing is not the only use for water, nor lumber for trees, nor pasture for grass. It is as real, as true, a utility if all these are preserved and combined, for the curing of tired minds and bodies, for the soothing of racked nerves, and for the solace of the sorrowing.

In this instance, too, the sacrifice can not be considered necessary on the ground of utility. The material benefits of the water can be obtained in the irrigation of the land to which it belongs and without the destruction of Hetch Hetchy.

PRIVATE CLAIMS.

It is said by the proponents of this bill that the city of San Francisco now owns a large part of the floor of the Hetch Hetchy Valley, that it already owns a part of the dam site, and has title to other lands within the national park. This it has acquired in order to strengthen its claim against the Government. It hardly comes with good grace from the holder of adverse interests to parade them as claims for favor. To strengthen its claim against the Government the city even went so far as to have its then mayor, Mr. Phelan, file claims in his individual capacity as a private claimant. To buy up these private claims, every one of which was in opposition to the interests of the Government which was trying to settle them, was a hostile and unfriendly act. Every claim purchased has been to hinder and embarrass the Government in its beneficent purpose in the establishment of the park for the use of the people.

The position of claimants to lands within a Government park is not well established, but most of it is pure bluff; and much of it, like Phelan's claims, apparent fraud. Referring to those private claims, the superintendent of the park, in his report to the Secretary of the Interior, says:

> There are approximately 20,000 acres of timber and homestead claims in the park. * * * The only patented lands now retained are timber claims and a few claims that were taken up under the homestead act and were never occupied as homesteads, but simply used as a pretext for bringing in stock to stray upon the park lands. These private lands are no longer of any value to their owners, as there is not sufficient grazing on them to keep half a dozen animals during the summer.

It is by pressing this sort of claims that San Francisco seeks to force the Government of the United States to accede to its demands. The superintendent strongly urges that the Government buy or condemn these worthless claims, and this it will of course do when it gets ready. Then San Francisco will be paid for her purchases if they be found to have any value.

PAYMENT FOR POWER.

It is argued that San Francisco proposes to pay the Government a good price for what it gets. It is provided in the bill that the city shall build certain roads and trails and after a while pay the Government an annual rental for the privilege of developing and using the water power.

Regarding the roads, it is stated that they will make available those sections of the park now rarely visited, and thus add to its value. It is only necessary to say that the Government can and will build these roads and make other necessary improvements without outside aid. It is not bankrupt; it is the richest and most prosperous nation in the world, and it can take care of its own property in what manner and at such time as it sees fit. There has never been and there never will be any protest or objection on the part of the people to the improvement of our national parks.

It is further provided in the bill that, beginning at the end of a 5-year period—which it is assumed will be required to construct the dam—San Francisco is to pay $15,000 annually for the first 10 years, $20,000 for the second 10 years, and $30,000 annually thereafter. The rental is to be used for the improvement of the national parks in California. Again, it may be said the Government does not ask for or need aid in the improvement of its parks. But as a purely business proposition the amount offered should be refused, as it is grossly inadequate.

The value of Hetch Hetchy dammed for the development of hydroelectric energy is fixed by the board at $45,000,000. It will develop 115,000 horsepower, which, at $20 per year, would be worth $2,300,000. But there are many who think it will be worth $30 per horsepower, which would make an annual return of $3,450,000. In other words, it is proposed to give San Francisco property that will command an annual return of $3,450,000 for from $15,000 to $30,000. Besides it is proposed to give it in addition 400,000,000 gallons of water daily for nothing.

It is not too much to say that never in the history of this country has the Government been asked to give away a right so great for a consideration so small. A distinguished member of the majority declared during the debate in the House:

> You are going to create one of the greatest water-power possibilities that was ever created in the United States. * * * The income derived from this proposition is going to be commensurate, when it is under full headway and in full operation, to the income of the Panama Canal.

There will be, however, this tremendous difference, that while the income of the Panama Canal will all go to the United States, the income from this proposition will all go to the corporation which receives the franchise, except a paltry $30,000.

But this ought not to be considered as a money deal. It is not. We have set aside this park for the use of the people. It is not for sale. Its use ought not to be purchased. It is, or should be, forever removed from exploitation. It should be kept and held sacred, devoted to the high purpose for which it was intended.

It is proposed in this bill that the city can not sell water or power to any corporation or individual to sell or sublet. But it is not provided that the city may not sell to any corporation it chooses all the water or electric energy it desires for its own use. Especially as regards the sale of power this is a great opportunity for fraud and graft. With a corrupt administration, or even a weak one, corporations can obtain favorable concessions, new projects could be instituted based on favoritism, by which competition can be controlled, lower rates for political influence; in these and many other ways the opportunity and temptation is open for unlimited corruption and abuse.

It is urged that in effect the bill is a proposition for developing power under municipal and governmental supervision, which is to be furnished to the people at cost. The bill does not so provide. In order to effect a compromise with the people of the Turlock and Modesto irrigation districts, they are granted the right to purchase at cost surplus power for pumping and municipal purposes. But such provision is for them alone. The city can sell at a profit or at a loss, or at any price, all the power it does not see fit to use itself to any corporation or individual desiring to purchase it. If commercial motives control, prices and terms may be arranged to induce use and obtain profits. If political motives govern, privileges will be granted where they will do the most good.

MR. PINCHOT AND SOME OTHERS.

The supporters of this bill are fond of parading lists of prominent persons who it is alleged are supporting this bill. Some of these are not now supporting this bill and never have supported it. Some are named as supporters of the bill who admit they have given the matter no attention or study. Others are supporting the bill for reasons not difficult to understand.

Hon. Franklin K. Lane, Secretary of the Interior, declares he favors this bill. It is to be expected that he would. He is a citizen of San Francisco, and that city is his home. Besides, he appeared and has acted as attorney and adviser of the city in its efforts to obtain this concession before he was appointed to his present position. As against his indorsement, which can not be considered impartial, is the fact that three Secretaries of the Interior preceding him have refused to approve the project—Secretaries Hitchcock, Ballinger, and Fisher. Secretary Garfield only approved of it on the condition that Lake Eleanor and Cherry Creek should prove insufficient, which condition he believed and which almost certainly would have amply protected Hetch Hetchy.

Hon. David F. Houston, Secretary of Agriculture, is quoted as approving the bill. What is construed as approval is probably his statement, "I am advised by those immediately in charge of the service that the bill adequately protects the forests with which I immediately have to deal." A small part of the water supply contemplated by the bill is to be obtained from Cherry Creek, which is outside the national park, and within the Stanislaus National Forest Reserve. The national parks are subject to the supervision of the Interior Department, while the national forest reserves are under the control of the Department of Agriculture. The bill certainly will not injure a forest reserve.

Hon. Gifford Pinchot has given his unqualified indorsement of this bill. It is certain that this indorsement of the great conservationist carries great weight and has had large influence in securing support for this bill. And yet slight reflection would have induced the conclusion that Mr. Pinchot's approval was only what might have been expected. Mr. Pinchot is our first, our greatest, forester. He is primarily interested in forest reserves and not in national parks. He is a conservationist of forests and not of scenery. There is a fundamental difference between national parks and national forest reserves. To the parks the public is invited. Inducements are offered for the people to come. But to the forest reserves the public is not invited. A policy of exclusion is best adapted for forest preservation. Every visitor is a danger. Every camper is a menace. There is no doubt Mr. Pinchot is logical in supporting this bill. By its passage more than 500 square miles of national-park territory will be transferred, in effect, from a national park to a forest reserve. A policy of exclusion will best protect San Francisco's water supply and Mr. Pinchot's trees.

It is known, of course, that Mr. Pinchot is greatly interested in extending the national power, especially with regard to the control of water-power rights within the States, and the provisions of the present bill by which the General Government receives payment for water-power rights is in accordance with his ideas on that subject. But the principle for which he contends is not necessarily involved in this bill. Back of the question as to whether the Nation or the State should control a water power granted is the question of the grant. If the franchise ought not to be granted at all, then the dependent proposition becomes unnecessary to consider. It is contended by most of those who oppose this bill that the national parks must not be exploited at all by anybody at any time or on any terms.

But these considerations should not have induced Mr. Pinchot's approval of this bill. He should understand that it is the most dangerous attack on conservation that has been made in recent years. He should understand that every enemy of conservation in the unfriendly West is favoring this bill; that every private interest that desires to invade and exploit a national park, a forest reserve, or any portion of the Government's unclassified domain is hoping for the passage of this bill; that if a municipal corporation can defeat the Government's purpose a private corporation can do so; that those who desire to save the national parks are endeavoring to defeat their invasion by any corporation or individual, public or private, in the interest of all the people as against a special privilege for a few—and that is what we understand Mr. Pinchot has made his life's ambition and desire. Mr. Pinchot should be first among the defenders of Yosemite instead of its assailant. That he is not so is a great disappointment and regret to those who are his friends.

Other names are given as supporters of this bill. But for every one thus given it is safe to say that ten equally or more distinguished could be given as opposing the measure. The press with practical unanimity all over the country denounce the proposition as a grab and a steal. Nearly all the societies and associations who have considered it have passed resolutions against it. For 12 years San Francisco has persisted in her attempt to induce or compel the National Government to relinquish Hetch Hetchy to it, but so far without success. As soon as the facts are known and the real conditions understood there follows an almost certain condemnation of the proposition.

That this is really the view taken by the people is strikingly shown by a statement made by a Senator in debate on this bill, who said:

> Senators in this body, Representatives in the other House of Congress, and public officials in Washington are receiving thousands and thousands of letters from people throughout the country protesting against the passage of this bill.

If that be true, it is an indication of the public desire, and a strong reason why the bill ought not to pass.

TRUE INTERESTS OF SAN FRANCISCO.

The true interests of both San Francisco and California are against the passage of this bill. Even the people of San Francisco are beginning to understand the folly, the worse than folly, of the policy pursued by a handful of men who have been managing the city's campaign for Hetch Hetchy. Speculative and chimerical schemes for obtaining power so that the city could experiment in running its street cars and furnish and sell light and power have been responsible for this. A long fight with the present private "monopoly" was to be won in the interest of the people by obtaining Hetch Hetchy. Deprivation and even suffering because of an insufficient water supply was deliberately allowed to continue so that the people could be induced to believe it could only be cured by the procurement of Hetch Hetchy. Thus the people were led to believe Hetch Hetchy was the one indispensable requisite to an adequate and suitable water supply. How far from the truth this really is we have already seen.

The facts are beginning to be understood, even by the people of San Francisco And when they finally realize what an absurd and almost impossible proposition it is to secure a water supply from a national park, when they understand that a joint supervision in the interest of the city which desires exclusion, and the Government whose object in the establishment of a national park is to invite the people to come and stay, and that this must inevitably lead to complications, conflicts of jurisdiction, litigation, and constant embarrassment and trouble, when they further understand that from the moment the bill becomes a law, if it ever does, litigation between the irrigationists of the San Joaquin Valley and the city is certain, and conflicts of State and national jurisdiction and laws are directly involved—when these things are understood, as they will be, the people will wish they had gone elsewhere so that all these complications could have been avoided.

It is believed that a realization of these facts is likely to occur to at least many of the people of the city. But it is stated in the press that a certain political group in the city has become so obsessed with the idea of obtaining Hetch Hetchy that they can not give it up except by a sacrifice of their political vanity. It may and probably will turn out that they do not more truly represent the wishes and interests of the people of that city than did those who assumed to represent the interests of the water users in the Turlock and Modesto districts. It is openly stated that the city's attorneys admit that if the grant of the valley is secured from Congress years of litigation will result. Mr. O'Shaughnessy, the present city engi-

neer, is quoted as saying a year ago that the Hetch Hetchy project was "a hideous blunder," but that the city had gone so far it could not back out.

Why has not San Francisco done as Los Angeles has done, which on the 5th and 6th of this month celebrated the completion of its great water system? It went a distance of 250 miles for its water supply at a cost of $26,000,000. It has taken eight years to complete the project, which will furnish 260,000,000 gallons daily and develop 47,000 horsepower. But it did not invite opposition and litigation and disaster by attempting to invade a national park. It went to a national forest reserve, where San Francisco should go. There is a choice of at least three open to the city, two of which will develop more horsepower than Los Angeles will obtain; one of them 95,000,000, and any of which will furnish as much water as the city can use for a century, and of as good quality as Los Angeles has obtained.

CALIFORNIA'S MISTAKE AND SHAME.

Still more would it prove a colossal blunder for California to aid in its own spoliation and shame. It would be a disastrous financial policy to aid San Francisco in an endeavor to save, as it claims, $20,000,000, and by so doing reduce the productive capacity of the State $20,000,000 a year for all time by depriving one of its fertile valleys of the water to which it is entitled and without which 200,000 acres of its land must remain an arid waste. It is a still more serious blunder to surrender the State's right to control its own waters for the use of its own people and to welcome an invasion of national power in contravention of those rights which it has jealously guarded for nearly a century. National power once exercised is like the camel's head under the tent; it is soon followed by exclusive occupancy.

Years ago California received the Yosemite Valley in trust for the people. It kept it until 1906, when it receded it to the National Government. By its voluntary act it relinquished every claim it had in the park. Even the people of California will admit that it is a most fortunate thing both for California and the rest of the Nation that the General Government is in control of that supreme pleasure ground and wonderland. Not only is California relieved of the burden of its improvement and maintenance, but the place is dignified and brought into true prospective by this national recognition of its worth and beauty. Nothing can deprive California, however, of the glory that the Yosemite, the wonder and admiration of the world, is hers, is within her boundaries, and can not be dissociated from her name.

None realize better than Californians that there is a money value in the preservation of her natural beauties and wonders. The climate and scenery of California are famed all around the world. These have been the attractions that have drawn thousands of permanent citizens and hundreds of millions of dollars to the upbuilding and enrichment of the State. California should be first to stand in defense of its priceless, God-given treasures. It should be the last to see them sacrificed.

Commerce on the Great Lakes.

EXTENSION OF REMARKS
OF
HON. WILLIAM GORDON,
OF OHIO.

IN THE HOUSE OF REPRESENTATIVES,

Monday, November 26, 1913.

Mr. GORDON. Mr. Speaker, under the leave to extend my remarks in the RECORD I insert an address delivered by the Hon. Harvey D. Goulder, at Cleveland, Ohio, upon the subject of "Commerce on the Great Lakes."

The address is as follows:

THE GREAT LAKES.

[Response by Harvey D. Goulder, at the International Marine Congress, held at Cleveland June 10, 1912.]

Permissible time is so brief for the subject that I may only bluntly give some figures which I beg you do not take as in any spirit of boastfulness, but rather that in economic questions, public or of the family, the exponent "X" or "Y" may, with the same dignity, represent one or one thousand. I can only in some general way indicate how we are endeavoring to solve problems on the Great Lakes in transportation, which throughout the world is the basis of commerce, as that is the fundamental of civilization and of modern life. However we may idealize or divine, all would be whistling against the wind unless sustained by earnest practical efforts in commerce.

Ours has been comparatively a recent development. Fix in mind that later than 1805 the only commercial vessel then on Lake Erie was taken overland around Niagara Falls to Lake Ontario, because there was not business for her above. Following the opening of the Erie Canal in 1826 and of others through Ohio and Pennsylvania, commercial movement started first up the Lakes in farm products, breadstuffs, provisions, and manufactures, until about 1840, when the trend began to turn eastward. By that year Chicago had attained a population of 4,470 and Cleveland 6,071. In 1855 the barrier between Lake Superior and the lower Lakes was broken by canal and locks to overcome the drop of 18 feet. By 1866 the Federal Government had spent but $3,000,000 in improvement of channels and harbors of the Great Lakes. The start began with draft of less than 10 feet in some narrow, restricted reaches of the natural waterway, and even less in some of the later developed great harbors. The original Welland Canal around Niagara Falls carried 7½ feet draft.

Full details are readily accessible in official statistics, but, speaking broadly, beginning in 1855 with 14,500 tons carried through the Sault Canal, we reached sixty-two and one-half million tons dead weight of cargo through that canal in the season of 1910, fell off somewhat in the business depression of 1911, and have started to strongly exceed 1910 in the present season.

Demands of the iron industry called for ore from the rich treasury in the Lake Superior region, which furnished in 1910 more than 42,000,000 tons, more than 80 per cent of all the raw material in the production of our pig iron of over twenty-seven and a quarter million tons. Nearly all came down by lake, approximately two-thirds to ports of Ohio, now the fifth industrial State of the Union. Of total tonnage of every description documented under our flag June 30, 1911, nearly 40 per cent and of metal—the more modern and efficient working tonnage—about 55 per cent were engaged on the Great Lakes, practically directed at and from Cleveland, where force of controlling circumstances fixed the head and administrative center of direction for this commerce, which in ton-mileage service performed reaches more than 25 per cent of that by the railroads of the United States, at a cost of sixty-seven one-hundredths of a mill per ton-mile in 1911, to be somewhat reduced for 1912, a cost less than 10 per cent of the average rail cost in the United States and perhaps not exceeding 20 per cent of cost by the most favored railroad of this or of any country. It is common belief that 50,000,000 tons of ore, averaging quite 55 per cent on dry analysis in metallic iron, will come down the Lakes this season, and movement of grain, coal, lumber, and other commodities to an equal amount is predicted. In this service the largest ship can carry 14,000 tons on a draft of less than 20 feet; she is 614 feet long, 64 feet beam, 33 feet molded depth.

The freight rate of some 70 years ago approximated $80 a ton to the East, $100 westward. I recall an old case based on a freight rate in about 1873 from Escanaba to Buffalo of $7.50 a ton; the current rate is 25 cents net to the ship.

You have been solving just such problems by increasing channels and harbors, size of ships, canalizing and prodigious advance in terminal facilities and cargo-handling machinery, so you are bound to be interested in a word about how we have worked along similar lines. May we instance that in the 25 years from 1885 to 1910, speaking of traffic through the Sault Canal, we accomplished a reduction in cost of 75 per cent, and so an increase from three and a quarter millions to sixty-two and a half million tons dead weight of cargoes; having in mind, if you please, some thirty-six millions published for the Suez in the latter year and the estimate of some eleven millions for the Panama after 10 years of operation; and in this connection the Sault Canal traffic represents a possible two-thirds of the freight movement on the Lakes.

I may only detain you to give briefly some figures. The first steam barge, which marked the evolution from sail to steam on the Lakes, was the *R. J. Hackett* in 1869. She was 211 feet length, 32 feet beam, 20 feet 5 inches depth, with engines aft, the prototype of the modern bulk freighter of the Lakes, and on draft of water then available carried something over 1,000 tons. One of the latest ships launched is the *William P. Snyder, jr.*, 614 feet length, 64 feet beam, 33 feet molded depth, capacity on present available draft about 12,000 tons, and on less than 20 feet draft, 14,000 tons. Again, the average cargo in 1895 was 1,800 tons, increased to 8,325 tons in 1908, although since somewhat reduced by some lowering of water and conditions which I may not stop to consider. A comparison is at hand

covering the operation of the record ship in 1891 in contrast with the record ship of 1909, as follows:

	1891	1909
Number of trips	26	26
Number of crew	23	25
Days in commission	205	225
Average size of cargo	2,164	10,940
Average draft of water through Sault Canal ....feet..	14.2	19.2
Average time loading port.....hours..	4.5	19
Average time unloading port.....do....	12	14
Average labor cost per day	$50	$66.15
Average wages per man per day	$2.17	$2.88
Total freight carried during season.....tons..	58,427	285,000
Gross earnings per ton of freight carried	$1.09	$0.69
Operating expenses per ton of freight carried	$0.89	$0.417
Cost of construction	$200,000	$420,000

Since 1902 more than 250 steel steamers have been built, only one under 400 feet in length (except a few for the Welland Canal trade), ranging in carrying capacity from 4,800 to 14,000 tons; more than 100 of these over 500 feet in length, from 8,000 to over 10,000 tons; and 25 over 600 feet, with 12,000 tons or more carrying capacity.

How our ships are constructed, with a clear hold to accommodate loading, and especially unloading machinery; description of the development up to 17 tons of the mechanical "grabber" for unloading; of the car dumper in general use for loading into the ship a car up to 100 tons of bituminous coal in from scant two to three minutes, with minimum breakage; of the growth of terminal facilities and loading and unloading appliances generally for these things, and all this part of the story I may not take time. You have or will have seen it all for yourselves. But I may not properly close without giving you succinctly the record of what we have attained for the essential feature of loading and discharging bulk cargoes of iron ore, coal, and grain. I am giving you probably the best but actual figures of working time. Iron ore, a cargo of 10,000 gross tons, loaded in 25 minutes, discharged in 3 hours and 15 minutes; grain, a cargo of 320,000 bushels of wheat, loaded in 2 hours and 40 minutes, discharged inside of 12 hours; coal, cargo of 10,800 tons, loaded from cars on the track into the ship in five and a half hours, discharged in 13 hours.

You will see from this hurried sketch how we are working out this problem of cheap water transportation, taking advantage of nature's generous provision. What the future growth will be no prudent man will say. The story of it up to now reads like romance. We have had aid of the Government to something over $100,000,000 for channels, breakwaters, and harbor work. From the early day of Gen. Weitzel we have had remarkable aid from the Engineer Corps to assist and guide, not strangely, because there is something about it all which attracts and appeals to the engineer, whose most cherished reward comes through triumph over obstacles accompanied with achievement of valuable results. Gen. Poe, to whom we owe so much, designed the Poe lock at the Sault, 800 by 100 feet, to accommodate in one locking four of the largest ships ever to be in service on the Great Lakes, only to find on its completion in 1896 that even two of the largest could not be locked through together. He said:

Surely such a commerce deserves every aid and encouragement that can be extended to them. Given a channel of 20 feet draft and it needs no prophet to predict a still more wonderful growth. Nearly 35 years I have watched this, but neither I nor anyone else within my knowledge has been able to expand at the same rate—the wildest expectations of one year seem absurdly tame the next.

Who may or shall adopt the rôle of prophet?

Why Not Mortgage Enough Timber in the Olympic Forest Reserve to Care for Present Needs?

EXTENSION OF REMARKS
OF
HON. ALBERT JOHNSON,
OF WASHINGTON,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, November 29, 1913.

Mr. JOHNSON of Washington. Mr. Speaker, in discussing the subject, "Conservation at close range," in the House of Representatives last Saturday I made the statement that I wished to be absolutely fair in my presentation; that I particularly desired that my statements with regard to the Olympic National Forest and its management be literally correct. I also was anxious that strictures against the Fifth National Conservation Congress be based on fact.

I have been honored in the receipt of a letter from the Hon. Henry S. Graves, Chief Forester, in which he expresses appreciation of some of my statements and criticizes others. But concerning the main theme of my speech—that is, the general effect of the national-forest policy on local prosperity and development—he "sympathizes with a great deal of what you have brought out."

Therefore, Mr. Speaker, I request permission to place his letter in full in the CONGRESSIONAL RECORD. It follows:

UNITED STATES DEPARTMENT OF AGRICULTURE,
FOREST SERVICE,
Washington, November 25, 1913.

Hon. ALBERT JOHNSON,
House of Representatives, Washington, D. C.

DEAR MR. JOHNSON: In complying with your request that I point out anything in your speech in the House of Representatives last Saturday that I find not to be in accord with the facts I do not wish to go into minute criticism. I wish rather to deal with the broad aspects of the questions raised, recognizing your apparent desire to deal with the present national-forest administration in a spirit of fairness. There are minor inaccuracies, and there are other statements also relating to what I regard as nonessentials which I doubt but could not answer without inquiry to run down the facts on the ground. Many rumors are current with regard to foolish or absurd or harsh actions by forest officers. Some of these have come up from time to time in Congress. Generally they prove on inquiry to be either greatly distorted or made out of whole cloth. I do not mean by this to imply bad faith on the part of those who accept the stories as they come to them, and I am anxious to sift all allegations of grievances which appear to have any justification. It is my earnest desire to get at the facts in every case where harshness or bad judgment on the part of forest officers is alleged, and I shall welcome inquiry from you on all specific cases which may come to your attention. When our men have done wrong I wish not only to right the wrong but also to get at the cause of trouble and try to correct it, that the Forest Service may serve the interests of the public without the spirit of bureaucracy.

I am heartily glad to see that you recognize that our forest officers are in close touch with the people of the country in which they work and in sympathy with them. I am grateful for your frank testimony to this fact, when the contrary view has been so generally spread abroad in the past. That our forest force is made up of eastern theorists and college graduates who are entirely out of sympathy with the people and are rather glad of opportunities to disoblige than of opportunities to be helpful is a time-honored slander long since worn threadbare. I do not mean that our men are never wrong; but we are trying in every case to see that the fair and right thing is done and to infuse the force with the spirit of helpfulness and service. When individuals are found temperamentally unfitted to work in this spirit they are displaced. Because our men are not bureaucratic, but work in the spirit which you yourself have pointed out, the sentiment in the communities which have first-hand dealings with the Forest Service is generally with us. I am entirely content that the national-forest administration should be known by its fruits.

I am sorry that in your remarks you have given color to the widely circulated report that the Forest Service brought large numbers of its employees to Washington for the National Conservation Congress and that through the participation of service men the voice of the West was stifled. No member of the service was brought to Washington for the congress. You cite Oregon as "represented by means of [its] Forest Service delegates." Every member of that delegation is a citizen of Oregon, and I believe all represented Oregon organizations. To bring in the name of the Forest Service as though it had in some unfair way exerted an influence upon the congress is an unwarranted and unjustifiable reflection on the organization for which I am responsible, and therefore on me personally.

Mr. Speaker, I break my Graves letter in order to say that in my speech I said that of Oregon's seven delegates I thought that four were either Forest Service men or paid employees of the conservation association. I do not and will not quarrel with Mr. Graves; therefore, in the permanent RECORD, under permission granted to me, I have changed my statement so that instead of reading "four Oregon delegates were," etc., it now reads, "several of the Oregon delegates were members of the Forest Service or paid employees of the conservation association." Some Forest Service men admittedly were there, but the main point is that the District of Columbia had 162 accredited delegates in that congress; Oregon had 7.

Mr. Graves's letter continues:

HARDSHIPS ON LOCAL POPULATION.

The main theme of your speech, however, concerned not these matters, but the general effect on local prosperity and development of the national-forest policy. I want to say that I sympathize with a great deal of what you brought out. It is true, that in the heavily timbered forests, especially of western Oregon and Washington, a real hardship is often imposed on the present local population by reason of the fact that the forests are not open to private acquisition.

By virtue of the fact that they were the first on the ground, these people would normally be the ones to reap the first benefit and obtain the first prizes, were the land open under the general land laws. As you say, there is nothing inherently wrong in a man's wanting to get the best that he can for himself and his family, or in the desire to obtain a speculative profit when others are doing the same and the law permits them to do so.

I am not speaking now, of course, of attempts to beat the laws and to get possession of valuable property through bad faith. We have unfortunately to deal with cases of the latter kind, although I am glad to say that most of them are old cases dating back to the time when the public conscience was less alive to the inherent wrong involved than it is now happily getting to be. I do not for a moment believe that you yourself would advocate allowing people to obtain homestead

patents or patents under mining claims to heavily timbered national-forest lands where the law is made a subterfuge under which land is sought solely for the value of the timber on it. While the laws should be administered in a liberal spirit, in the sense of sympathetic recognition of the needs and honest efforts of people to establish homes and put to good use the public-land resources, to permit abuses of the law which facilitate the consolidation into great holdings and the indefinite postponement of development is not liberality but laxness. It is also bad for the public welfare.

I know of many places in which actual development of the country is now blanketed because lands suitable for agriculture were taken up under the homestead law by people with no intention of themselves putting the land to use and where the true settler is now kept out because the price of the land is put so high by those who are holding it that there is no chance for the man without capital to make a start; and if he does make a start, it must be under a handicap imposed by the necessity of paying heavily for the privilege which it was the intention of the Government to give him for nothing if he would take the land and put it under cultivation. The real vital question is this: Are we to go ahead as a Nation making a few people rich and making the ordinary citizen pay tribute at every turn to those who are astute or powerful enough to get into their hands the sources of wealth, or shall we continue the American tradition of equal opportunity for all and of making this a good country for the average man to live in?

In the end the national forests will more than justify themselves by the benefits which they will diffuse among the people settled in and around them.

To a very large extent they have already justified themselves. Wherever their resources are in present demand they are actively working for local prosperity, are satisfying all reasonable demands, and are strongly supported by local sentiment.

Where their resources are not in present demand there is an entirely explicable chafing against the system which throws a heavy burden on local communities. There is little comfort to the man who, with a handful of neighbors, must pay heavy taxes for roads, schools, and other purposes in the thought that at some time in the more or less indefinite future conservation will mean increased local prosperity. He bears his burdens now. Though the forests had been bought up and were being held undeveloped by speculators in order to take toll of the public later, he would at least, if they were in private hands, be able to make them pay their share toward the expenses of local self-government.

We are doing what we can to make the forests help these people, and we are more and more studying out ways to promote local welfare and development. Our present timber-sale policy, which seeks small purchasers for the supply of local needs as well as large purchasers to develop inaccessible regions, is an example.

The 25 per cent of receipts which is paid over to the States, and which already yields very substantial revenues for many localities, is another means to the same end. Already in some places this 25 per cent exceeds the revenue which would be obtained through taxation if the land were all in private hands, and as time goes on this will become more and more generally true. I do not believe that in the long run the best way to help the communities which now receive little from this 25 per cent fund is to increase the percentage, for where little use of the forests has as yet been developed the receipts would not do much good even though they were all made available.

BELIEVES GOVERNMENT SHOULD HELP IN CERTAIN CASES.

I do believe that the Government might well recognize an obligation to local communities which now receive little from this fund along a different line. I see no reason why the National Government should not, out of its general resources, provide for the development of roads in such regions in some proportion to the value of the Government property as against the value of private property in the locality. While the improvements and means of development thus provided would be in the nature of borrowing on the value of public property which is not now bringing in any returns, the expenditures would not merely help the people now resident in or near the forests, but would also tend to develop the value of the property owned by the Government.

Mr. Speaker, again I interrupt Mr. Graves's letter to call the attention of every Member of the House of Representatives to what he has written just above. That is the whole point. It is the basis of all my arguments. The bringing of certain great counties in my district to the very verge of bankruptcy is why I complain, and the people of southwest Washington are behind that complaint. Mr. Graves is right. Why should my county this year spend $100,000 of its own money for 10 miles of road in the forest reserve, where the United States Government is holding for the future of all of its people millions of dollars' worth of resources? Note well what the Chief Forester has written. It is not desired to sell this timber now. Why should not Congress advance money on it exactly as would be done if it were privately owned?

Mr. Graves concludes as follows:

I hope that we may be able to work together to make the national forests serve what I conceive to be their true purpose—not the building up of a system of Government landlordism with a view to raising as large revenues as possible from the people whose labor and whose homes are making the West and strengthening the country, but the increase of prosperity and the maintenance and development of the power of the forest resources to serve human needs and to keep this country a good place for the average citizen.

Very sincerely, yours, H. S. GRAVES, *Forester*.

Mr. Speaker, in behalf of the people of western Washington I thank Mr. Graves for his splendid letter. I have placed it in the CONGRESSIONAL RECORD and added it to the pamphlet I am mailing in order to give it the greatest possible publicity.

HOW WALCOTT'S STATEMENT HAS KEPT ALIVE.

One thing more: In my remarks last week I endeavored to point out some of the fallacies and misstatements in the conservation dream books found in such profusion over in the Congressional Library. Among other things, I said that Hon. George Otis Smith, present Director of the Geological Survey, had predicted in 1889 that all of the coal in the United States would be gone in 50 years. Mr. Smith very kindly calls my attention that about 1899 Mr. Walcott, then Director of the Geological Survey, made the statement in the course of an address that the anthracite coal of this country would be exhausted in 150 years. In a letter to me Director Smith says:

A typographical error made one of the newspapers quote him as giving the life of the anthracite coal as 50 years. This error was promptly copied by other newspapers, which in turn added to the misstatement by leaving off the anthracite and making his statement apply to all coal, bituminous as well as anthracite; and I understand from Mr. E. W. Parker, coal statistician of the survey, that this statement was widely quoted at the time.

How easy it was for some alarmist to grasp that statement as it continued to go its round, credit it to the present director, and place it in a book on the resources of the United States, where I found it during my study this summer of the conservation dream books.

Ah, Mr. Speaker, how many careless statements are made, here, there, and everywhere, to be caught up by the press and scattered broadcast. Then, when we want facts in connection with the discussion of a great national question, such as I have been discussing, what an effort it is to pick out the truth from the loose, false, and careless statements put forth in such volume.

Material for Construction of Ships of War.

EXTENSION OF REMARKS
OF
HON. WILLIAM J. BROWNING,
OF NEW JERSEY,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, November 22, 1913.

Mr. BROWNING. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include an article from the Army and Navy Register, dealing with economy in the administration of Army and Navy affairs, a subject of deep interest to the multitude of men who earn their living in the navy yards and in the shipbuilding plants of the country. The article is instructive as well as illuminating.

The article referred to is as follows:

A FOREIGN INVASION.

"Sooner or later the American producer of material which enters into the construction of ships of war will come to a realization that the existing law permits the purchase abroad of that material. Contracts which have recently been awarded by the Navy Department show that every disposition exists to lower the cost of Navy work by placing orders with European manufacturers. There might be justification for this if it were shown that the Government were in the hands of a monopoly that was looting the Public Treasury, but there is no justification for the adoption on these grounds of a general policy which shall favor the European contractor to the detriment of the American manufacturer. The Navy should not be built up or maintained by the encouragement of the foreign producer. It is no great shock to the body politic to be required to pay the American prices for American material. There is frequently a difference of quality, a certainty of promptness in delivery, and the opportunity for duplication of material in time of emergency which account for the greater cost.

"In other years the naval appropriation law has contained a clause requiring the Navy Department to purchase its war material, especially that entering into the construction of ships, of domestic manufacturers. This requirement was modified subsequently so as to permit the Secretary of the Navy to purchase the material abroad if it should appear that the American bidders were excessive in their prices. The last Congress omitted any such qualification, while the new tariff act includes a provision that allows the shipbuilders of this country, including, of course, the Navy Department, to buy material of foreign manufacture, to be entered in bond with the understanding that it shall have free entry on proof that the material has actually gone into the composition of a ship, either Government or mercantile. It is perhaps natural that the Secretary of the Navy should take advantage of this circumstance to obtain material from Europe at a lower figure than it is possible to obtain it in the United States, but it is also easy to imagine that this commercial instinct may be carried to the extremity which will find the Navy Department some day without domestic sources of supply. It is wise to have at the command of the Navy Department, as of the War Department, reliable plants under private control from which war material may be derived in time of emergency. It will be of temporary benefit only to drive out of business the American manufacturer in any line in order to make a showing of 'saving' in the expenditure of public funds in certain directions.

"There is no doubt that all of our ships and guns could be imported at a lower price than they can be built in this country; and for that matter, to illustrate the point humorously, we could readily secure from abroad droves of alien sailors—coolies, if necessary—and by naturalizing them man our ships with low-priced foreigners brought here from distant ports where they receive but a pittance in wages. In this manner our Navy Department could make a huge saving in our naval expenditures, but this is not the sort of Navy the American people want. Aside from the splendid traditions of the service, we believe that we can build our ships, guns, and equipment better than they can be built in any foreign country. In matters of ship design we are admittedly superior. It is nowhere contended that there exists a trust or monopoly which controls the shipbuilding industry in this country.

"In the end it must be realized there is a settled conviction, to which Americans will subscribe unfailingly and with enthusiasm, that their Navy shall be American through and through; that the ships shall be the product of our navy yards, or of the yards of our domestic shipbuilders; that our armor and equipment shall represent the output of the foundries and factories of this country; and, finally, that these fighting machines, the visible evidence of superior workmanship of our own artisans and the ingenuity of our own designers, shall have for its personnel the American officer and the American bluejacket."

The Trinity of Evils.

EXTENSION OF REMARKS
OF
HON. P. E. QUIN,
OF MISSISSIPPI,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, November 26, 1913.

Mr. QUIN. Mr. Speaker, I ask unanimous consent to insert in the RECORD an address delivered by the Hon. WM. H. MURRAY, of Oklahoma, at Columbus, Ohio, November 13, 1913, on the subject of the "Trinity of Evils."

The SPEAKER. The gentleman from Mississippi asks unanimous consent to extend his remarks in the RECORD by inserting the document named. Is there objection?

There was no objection.

The address of Mr. MURRAY of Oklahoma is as follows:

ADDRESS OF THE HON. WM. H. MURRAY, M. C., OF OKLAHOMA, BEFORE THE FIFTEENTH NATIONAL CONVENTION OF THE ANTISALOON LEAGUE, AT COLUMBUS, OHIO, NOVEMBER 13, 1913.

Mr. Chairman, ladies, and gentlemen: Since you and I are strangers to each other, let us have an understanding before I begin. If you knew me you would understand that I never take a public position merely to please the multitude, and I shall not do so now. I am not afraid to differ with my fellow man, but I am afraid to be wrong, and the great solicitude of us all should be that we are right down to the last detail. With this understanding I begin.

I understand the prime object of your convention to be the eradication of the liquor traffic in every State and the ultimate adoption of an amendment to the Constitution of the United States prohibiting the manufacture, sale, importation, and transportation of alcoholic liquors in the United States.

In the growing demand for this extension of prohibition laws you are met with the objection that to enforce this policy means the destruction of the functions of State government, and you desire to know of me, among other things, my opinion of this objection. To this question my answer is that I am a strong believer in an indissoluble union of indestructible States and that a just balance of power between local self-government of the States and the Nation will ever remain the mainstay of our liberties and the perpetuity of the Republic; but this boundary line is not marked between wholesome provisions and national evils. In the abstract, the word "universal" is our cue. The key to the preservation of the sovereignty of States in the exercise of those things necessary to give to the States their proper autonomy exists in the grant of suffrage, the extension of its qualifications, and the control of elections, together with the State's control of all things which can not be administered universally or are not national evils. To express this concretely, the adoption of the thirteenth amendment to the United States Constitution, destroying the evil of slavery, was a wise provision and not out of line with the proper proportion of power between the States and the Federal Government, for the reason that it was a universal evil which could have no exceptional benefit by its retention in any State.

The mistake made was in the attempt by later amendments to control suffrage in the Southern States by the Federal Government, because suffrage can not be "universal" in its application and must be determined by the condition of the people. Herein marks the boundary line between State and National authority. The abolition of slavery, a universal evil, was then like the universal evil of the liquor traffic of to-day, and the adoption of the prohibition amendment is merely an extension of the policy which marked the adoption of the thirteenth amendment before referred to. Hence, as one Member of Congress, I would favor the submission to the States of such an amendment, but I warn you that in our doing so consummate care and discretion must be exercised not to violate practical experience. Such an amendment, in the first place, must be submitted in a constitutional manner, so that the validity of its adoption can not afterwards be questioned; and, secondly, we should plant ourselves on the proposition that alcohol, though one of God's greatest medicines, was not intended to be used as a beverage, and in drafting such an amendment these fundamental principles should be recognized. I may not be expressing on this point the views of you gentlemen. In this position I have but my own conscience to consider. Sufficient to say, I am expressing those indicated by my own conscience, drawn from my own study, information, and experience, having lived for many years in the old Indian Territory, now a portion of Oklahoma, and which Territory is the only domain under the flag where a legal saloon never existed. To deny liquor's proper place as a medicine is but to deny science, the Creative Divinity, and the experience of mankind.

Instead of such proposed amendment being violative of the best policy of the autonomy of the States, I repeat on the contrary that our experience teaches that many phases of interstate commerce and of the control of traffic and transportation should be given to the Federal Government, that we may efface the "twilight zone" between State and Federal jurisdictions, which too often permits monopolies to go unwhipped and menacing Nation-wide evils to live under the sanction of law, and that, too, contrary to our wishes.

I say this as a believer in the doctrine of State rights as modified by the issues growing out of the destruction of slavery, rehabilitating and establishing the new Nation—the Republic of to-day.

The wisdom of State power to control, define, and regulate suffrage as the boundary line between Federal and State authority is better shown now than at the time of the writing of the Constitution, because different conditions in different States determine for the most part whom it is best to intrust with the ballot. Upon virtue and intelligence republics must ever depend; hence to intrust the ballot in the hands of an ignorant or vicious man is more dangerous than to intrust firearms to a child; is more dangerous than giving a bomb to an anarchist; because the one might blow out the brains of an individual or family, while the other may blow up the republic and civilization itself. We have reached that period in our development when it becomes necessary in the interest of society and wholesome government to limit rather than to extend suffrage. The wisdom of this is shown in the Southern States. Prohibition itself gained a foothold there and was made possible only after the restriction upon the suffrage of the negro. It necessarily follows that in some States it is the part of wisdom to base suffrage upon sex, with limitations; in others, perhaps, to extend suffrage to all, irrespective of sex, but with a limitation upon the vicious of both sexes.

The exercise of the ballot can never universally be applied, because universal qualification can never be attained in the most enlightened State; hence it must ever remain a State problem; and herein lies the distinctive hub around which all State authority must revolve. But in dealing with great national or universal evils our safety lies in national control, regulation, or national power to destroy. On these the best wishes of the Republic will be subserved by embracing the well-known principles of the law of the old Roman Republic: Salus rei publicæ suprema lex esto—rendered in English: "Let the public good be the supreme law."

But to return to your primary object, the suppression of the liquor traffic, I take it, however, that you do not intend to neglect the moral side while drafting the legal means for its suppression, nor that you intend or will overlook the attending evils connected with that traffic; hence my address on the "Trinity of evils" will embrace both the legal and moral side of this three-sided mongrel of Mammon. There are three fundamental evils ever present and characteristic of a dense and congested population, which I choose to term the "trinity of

evils," because they are so interwoven and interlocking, so strongly inseparable with a congested population, as to become the root of all evil in our American life and advanced civilization. They are as surely the trinity of corruption and debauchery, of immorality and sin, as the "Father, Son, and Holy Ghost" constitute the Trinity of righteousness and the Christian religion. Almost invariably where you find one of these evils you will find one or both of the others. I refer to the evils of intemperance, gambling, and sexual debauchery, and I am not sure but what these evils are in the reverse ratio of my naming them.

The drink habit is in the forefront because of its own inherent evil and because it is the cloak to cover and to incubate the other two, just as it covered the debauchery of Alexander the Great, whose real downfall was that of a libertine. While a man may go to the ditch and to the gutter by drink he may regain his will power and self-control, recover his health, and his manhood, and become again a good citizen, while should he go to the ditch by sexual excesses or debauchery he is mentally, morally, physically, and spiritually dead.

Gambling is a great evil, because it leads to the other two. Games of chance and gambling seem to run in American blood. Our greatest business institution—the stock exchange—is the very mother of the vinegar of gambling, and yet it is a business concern that touches the pulse of all the civilized and uncivilized earth. Not a drought or flood, a bountiful rain or sunshine, a pestilence or production, a treaty of peace or arbitration, or war or bloodshed, but is quickly told by the pulse—"the ticker"—of the stock exchange; but being a private club, not subject to public control or legal regulation, it is often diverted from its legitimate functions—a common market place for the sale of bonds, securities, and products—to one of gambling. This as the chief of all gambling concerns can be wiped out by law, while the evil of gambling in the American blood can not be eradicated by law, neither can it create sobriety, nor morality, nor that will power and self-control that will enable the citizen to throw the brakes upon his passions and appetites.

And this brings our attention to the moral precepts of the family, of the home, and of the church that must be continued even after we have secured the proper laws, and both must go hand in hand for the destruction of the votaries as well as the temple of these evils. We can not legislate temperance into a people, but law can destroy the rum shop and the temple of its collaborers—the gambler and the libertine—but it can not destroy its worshipers. Law can tear down the temple, but its votaries must be reformed through the influence of the home and the church. We are too often prone to feel ourselves in fancied security upon the success at the polls of the prohibition statutes and laws against gambling and the brothel. We fail to uphold the officers' hands, to give them proper encouragement, without which it is impossible for them to perform their duties. It is through such persistent and constant aid of the people who compose the juries of a community and legislature of State or Nation. The officer is not to blame when public sentiment aids this trio of evils and you shirk your responsibility as juror, voter, or citizen; nor can the law be made self-executing by the election of men to public office who have neither integrity, honor, veracity, nor morals. We ought never to elect to public office a man whom we would be ashamed to invite into our own homes.

In this connection permit me to quote from James Bryce's work, the American Commonwealth, in which he says:

> A prominent New Yorker once said to me, speaking of one of the chief justices of the city, "I do not think him such a bad fellow; he has always been friendly to me, and would give me a midnight injunction or do anything else for me at a moment's notice, but, of course, he is the last person I would dream of asking to my house."

This was but an indirect means of telling Mr. Bryce that this judge was a moral reprobate. And when Mr. Bryce put it into that splendid work, which, to my notion, is the soundest, clearest criticism of American institutions yet written in the English language, what a scathing rebuke to New York's judiciary was thus placed in print!

Permit me, ladies and gentlemen, to bring home to you this question: Do you repeat in your home States the example of New York in the election of your public officials?

A drunkard is fit neither for business nor public office—he is not a successful saloon keeper.

A gambler makes of a professional man a vagabond, of a merchant a bankrupt, and a defaulter of a public officer.

A libertine, having no morals, is soon destitute of honor, veracity, or integrity. Then, why should we elect either?

The expression is often made that "corruption destroys government," but corruption is not the first cause. What produced the corruption? The answer is: The inactivity of the righteous citizen. Just as the body of the individual is normal, his pulse beats regularly, the blood circulates freely, and all of the other elements of the living organism operate in strict accord with nature's laws, give health, happiness, and long life to the individual; but when the pulse beats irregularly, the blood and other organs cease to do their normal part, poison and disease of the system set up, and sickness and death inevitably follow. So also does government become corrupt and society sick, and national death follows when the best element of society fails to perform its duty. When the home ceases to teach the child, the school overlooks his moral precepts, and the church and the pulpit fail to thunder against evil tendencies, and the righteous citizen fails to deposit an honest ballot, consistent with his conscience and principles, in making up the courts, the legislative and executive branches of the Government, or to perform the duties of juror, then it is that "corruption in government" sets in and national death follows.

Yes, my friends, we must elect to public office, more particularly to the highest positions, to the bench, to Congress, and to the United States Senate, only such men who will understand that finer sense of responsibility which their position carries, and with that will power and self-control necessary to restrain passion and to preserve commendable conduct while exercising the functions of public office, for their official aid and assistance in the exercise of the power of such public office; nor must we forget to train the future manhood and womanhood in the home and in the public school to know themselves, to understand their own passions and appetites, and to create within them that will power that will enable them surely, certainly, to conserve their own passions by throwing on the brakes, especially upon that divine passion, out of which grow mentality and the strength of manhood, the sex passion, which Buddha so aptly describes:

> A sex passion, shot into the human soul like an arrow, sharper than hooks with which to tame elephants and hotter than flames—

a divine instinct which, when conserved, gives to its possessor mentality, courage, force, and will power, but which, when left unrestrained or to drift without proper moral direction, wrecks its possessor of all physical, moral, mental, and spiritual manhood. I mean to impress upon you the importance of this training, along with the demand for legislation, because such training insures our own boys and girls, not alone against degradation, imbecility, and idiocy, but gives to our future courts, juries, and legislatures character to enforce and uphold the law and all the powers that make for a nobler citizenship.

Mr. James Bryce, though a foreigner himself, gives us warning of our social evils by the question:

> Will existing evils in America prove so obstinate and European immigration continue to depress the average of intelligence and patriotism among the voters?

Here he touches the keynote of what portends the greatest evil that underlies our social fabric. Legislation, true enough, does not produce social conditions, but does produce tendencies creating them. The foreigner in general among us does not constitute the evil. It is that class coming by the "contract system," which, having in view nothing but cheap labor and, in order to secure this cheap labor, makes contracts through agencies scattered all over Continental Europe, has brought to our shores and planted in American life the ignorance and loathsome diseases, the depressed and hopeless, the degenerate morals, and the superstitions of the worst elements upon that Continent, until the white-slave traffic, which has characterized Continental Europe since the fall of the Roman Empire, has been planted in America. America was founded upon Anglo-Saxon, German, and Scottish regard for integrity, morality, and honesty and purity, and, above all, regard for the virtue and purity of womanhood; but this regard is becoming weaker in most of the States of the Union, not confining itself alone to the overcrowded cities, but extending its branches and corrupting agencies of influences even to the rural communities, where lies the greatest hope of American purity of manhood and womanhood. The virtue of the wife and mother, her pure character and blameless life, is the saving power of the human race. Regard for and faith in her virtue is the mainstay of its continuance. Shall we shut our eyes to these awful conditions and grant that libertinism is the rule and not the exception? Once this becomes true; once this faith and this confidence is destroyed; once when we point to the womanhood and can not say, "There, as a rule, is virtue, spotless morality, and purity," your civilization is over and with it your free institutions.

A nation, like families and races, is weak or strong in proportion to the morality and virtue of its women, and its women are chaste in proportion to the regard in which men hold them.

No man under an extensive, penetrating research of science and of the philosophy of history can escape the conclusion that laws of the State (government) and rules of society affect the home, home life, and happiness.

I am practical enough to know that virtue can not be legislated into the character of womanhood; but investigation will show that the lewd are the exception, and there are three conditions which the law itself can remedy: The enticing of the innocent, unsuspecting maiden from the country precinct on the promise of being a "friend"; carrying her away to some great city to be surrounded for a few days with the luxuries of life, eventually to be taken by stealth to a brothel and there forced to remain and become deflowered, can be prevented by law. Conditions of poverty and hardships also add another, larger per cent to the same class. The law could assist in alleviating these conditions of poverty. And another class, where the professed lover steals the heart and confidence of some pure, innocent girl, in whose heart has been planted a sex passion of which he takes advantage, turning from the character of lover to that of the libertine and seducer—the law here could affect this social condition. For the white-slave trafficker and the libertine or seducer the doors of the penitentiary ought always to be open. The woman who falls by reason of hardships and poverty, the helping hand of the State should assist and alleviate that condition. The truly lewd in mind and body we can only take care of as experience best demonstrates, for neither law, training, nor social condition will benefit that class. But let us save that greater per cent—the unwilling deflowered.

> I care not how far from the paths of virtue she has strayed.
> I care not what inroads dishonor hath made.
> I care not what elements hath cankered the pearl.
> Though stained and sullied she's somebody's girl.

The deflowering of young womanhood ought to bring to the doors of us all the realization of the precarious and hazardous protection of our own daughters.

The denizens of the brothel may shock us, but may we possess a Scotchman's will to marshal our battallons against this "Trinity of evils," and in our hearts for wife and mother, for home and family, may muffled drums eternally beat their everlasting reveille.

The integrity of the home and the happiness of the family, the pure character of the wife and mother, constitute the sum of society, civilization, and wholesome government.

Overflowed Lands in Bonner County, Idaho.

EXTENSION OF REMARKS
OF
HON. ADDISON T. SMITH,
OF IDAHO,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, November 29, 1913.

Mr. SMITH of Idaho. Mr. Speaker, under the unanimous consent granted, I desire to extend my remarks in the RECORD by having printed a report made in 1910 by C. G. Elliott, Chief of Drainage Investigations, Department of Agriculture, with reference to the drainage of an area of land in northern Idaho, consisting of about 40,000 acres. Much of this land is in private ownership and the people living in that section have been endeavoring to perfect plans to reclaim the land by making assessments at pro rata amounts per acre, but they need reliable information regarding the engineering feasibility of the project.

The report of Engineer Elliott contains information of the greatest possible value to the people in that section, and it should be available to them, having been gathered at considerable expense. It will also be valuable to the Members of this and the other branch of Congress in considering such legislation as may be necessary to provide for the drainage of this large and valuable section of the country.

The report is as follows:

DRAINAGE INVESTIGATIONS.
UNITED STATES DEPARTMENT OF AGRICULTURE,
OFFICE OF EXPERIMENT STATIONS.

Report on the Kootenai River Valley in Bonner County, Idaho, by C. G. Elliott, Chief of Drainage Investigations.

The Kootenai River Valley between Bonners Ferry, Idaho, and the international boundary line has for years attracted attention because of its agricultural possibilities. The valley contains about 40,000 acres of level alluvial land free from stones and timber, lying in the heart of a mountainous region containing numerous mining camps which constantly demand large supplies of food. Some correspondence passed between the department and Mr. Charles G. Reeder, of Spokane, Wash., regarding the possibility of converting this large area into productive farms. In the course of my western trip last summer I found it convenient, in response to Mr. Reeder's request, to make a personal examination of the valley not only in Idaho but also in British Columbia as far as the town of Nelson, and now take occasion to discuss the reclamation problem in the light of such information as I have been able to collect.

Before making this personal inspection I was permitted to examine the very excellent report of Mr. Otto V. Welle, civil engineer, made upon the reclamation of the valley in 1905, in which he outlines a plan for reclaiming the lands. I also obtained a blue-print land map, upon which is shown the meandered course of the Kootenai River in northern Idaho and in British Columbia. In this discussion I have used the data which Mr. Welle has gathered from various sources and shall take occasion to comment upon the plan which he proposes for reclaiming the lands of the valley.

On August 5, 1910, Mr. Reeder, of Spokane; Mr. A. J. Kent, of Bonners Ferry, and myself started down the river from Bonners Ferry in a gasoline launch and proceeded by boat as far as the station of Copeland, and thence by railroad along the edge of the valley to Fort Hill, which is situated at the international boundary line. Several short excursions were made afoot across portions of the lands immediately adjoining the river, though it should be understood that these examinations were general rather than specific in character.

The Kootenai River is a stream flowing northerly between two high and abrupt ranges of mountains and is bordered by a valley of nearly level land from 1 mile to 4 miles wide. The stream itself is found to be 50 feet deep in many places, is about 650 feet wide, and is supplied by mountain lakes and streams. The banks are about 20 feet above the low-water stage of the river. A strip of woodland frequently fringes the bank, although in general the entire valley is fairly clear of timber and brush of any kind. The land slopes away from the stream toward the foot of the bluffs, where the surface is usually 4 or 5 feet lower than at the river banks. Several streams of various sizes coming out of the mountains enter the valley, which in many cases have but a small channel in which to carry the water from the hills to the river. The lands along the foot of the bluffs are always wet, due to the seep water which comes from the hills and also to the small streams which flow from the mountain slopes and deposit their waters upon the level lands below.

An examination of the lands in general shows that the surface has been eroded by overflows, which have doubtless occurred throughout the entire formation of the valley. Small coulees, 25 to 50 feet wide and 6 or 7 feet deep, are sometimes found scattered throughout the valley, having no connection with the river. There are also ponds or flats which lie 2 or 3 feet below the level of the surrounding land. At the time of my visit, which was a low-water season, these depressions and coulees contained water, the larger ponds being in such a swampy condition that they could not be crossed. The land is remarkable in that it contains no stone, gravel, or pebbles of any kind, although lying between mountains of granite and limestones.

The natural vegetation may be regarded as a helpful guide in determining the fertility of the land. I find the higher and drier portions of the valley are covered with a fair quality of wild grass, much as is found upon the wet prairies of the Mississippi Valley. This is valuable for pasture and is utilized for hay when the seasons are favorable for harvesting and curing the crop. The wetter lands are covered by a vigorous growth of the marsh scouring rush, a plant belonging to the *Equisetaceæ* or horsetail family. The lands which are constantly covered with water produce the *Sagittaria*, or arrowhead, a plant belonging to the water-plantain family. The swamps also produce the well-known club rush, belonging to the bulrush family. These plants are found on all of the wet lands of the Mississippi Valley and are there regarded as indicating a fertile soil. Soils which contain them have been drained and proven to be excellent lands for the production of staple crops, such as grass, grains, and corn.

Mr. E. B. Ross, of Spokane, has furnished me a copy of a report upon the analysis of this soil made at the State agricultural experiment station, Pullman, Wash. The analysis shows the following plant-food elements: Potash, 0.32 per cent; phosphorus, 0.19 per cent; total nitrogen, 0.04 per cent; lime, 9.12 per cent. The total humus of the soil is given at 0.3 per cent. In commenting upon this analysis, Mr. Thatcher, director of the station, says that the soil is somewhat deficient in humus and in nitrogen. By comparing the analysis with that of other soils this is found to be true. A good soil, according to the chemist, should contain about 0.15 per cent of nitrogen. This deficiency, however, is characteristic of many alluvial lands. The soils in the Mississippi Valley which produce large crops of cotton show the same characteristic, yet many of them have produced abundant crops for many years without the addition of artificial fertilizers. The quantity of lime, which is abundant, is always regarded as a valuable constituent of soils. I may say in this connection that chemical analyses of soils are not given very much weight by practical agriculturists except in connection with experimental cultivation. However, taking the chemical analysis in connection with the growth of natural vegetation and the crops which have been grown at various points in the valley, I should say that there is no question regarding the value of the land for the production of such field crops as are suited to the climate. In fact, this has been demonstrated at various locations along the river where the lands are sufficiently dry for farming purposes. The surface soil has a light-gray color, except in the more swampy portions, where the humus derived from decaying vegetation has given a dark color to the soil. It would appear that the lands are especially adapted to grasses and forage plants, but their present wet condition limits the varieties of vegetation to those which can withstand an excess of water. The fact that redtop grass grows abundantly where the conditions of the land are favorable shows that the more valuable grasses, such as timothy and clovers, can be produced if proper drainage is secured.

I am told that with the exception of 1894 the valley is subject to overflows from the river at only certain points where the banks are low or where creeks or small rivers enter the stream. It is said that usually the banks of the river are high enough to prevent a direct overflow, but where streams enter the channel the water from the river flows out during the flood season, backing up the small streams and passing out into the lowland which lies at the foot of the hills. The water having filled all of the low portions of the valley in this way causes the land to remain permanently wet during the entire season, because the slight fall of the surface does not permit the water to pass away when the river recedes. The overflows are not dependent in any way upon the rainfall of the valley, since the stream is fed from the mountains, where there is an abundant quantity of snow, the depth often reaching 6 or 7 feet. When the snow melts in the ordinary way or is hastened by Chinook winds, which not infrequently strike the mountains, great quantities of water are brought to the river by the mountain streams. The volume can not be accurately predicted, because of the erratic conditions which cause the melting of the snow. The probable amount can only be estimated by the floods which have already occurred. In addition to the waters produced by the overflow of the banks of the stream at low points there are always large volumes of water which come from the slopes of the mountains direct and are deposited at the foot of the hills upon the level lands. It is quite clear

that although these lands are fertile they can not be profitably cultivated without protection from the excessive quantities of water which come upon them every year from the two sources named. The custom of the owners at present is to secure what value they can from the land by grazing after the floods disappear and later mow and cure such grass as may be found suitable for hay. There being a dearth of agricultural land in that portion of the State, the prices for produce are always high, and for that reason the reclamation of the valley for productive purposes is an attractive proposition and merits most careful consideration.

The climate and rainfall should be considered, since these are important features of an agricultural region. The rainfall records have been kept at Bonners Ferry since May, 1907. We have records of only one entire year, that of 1908. The total rainfall for that year was 19.6 inches, as appears from the following record of the Weather Bureau at that point:

Rainfall at Bonners Ferry, Idaho.

(Elevation 1,850 feet.)

	1907	1908
	Inches.	*Inches.*
January	.....	1.60
February	.....	2.20
March	.....	1.96
April	.....	1.65
May	1.07	2.26
June	2.34	2.11
July	1.09	.74
August	2.65	.47
September	2.31	.28
October	.31	2.50
November	2.42	1.44
December	2.32	2.31
		19.63

The greatest monthly precipitation occurs in February and in December. The rainfall, however, during the summer months as indicated by the records of the two years is not at all uniform, as, for instance, in August, 1908, it was 0.47 inch, while for the same month in 1907 it was 2.65 inches. September, 1908, had only 0.28 inch, while the same month in 1907 had 2.31 inches. The maximum rainfall, however, for any month is not excessive. In fact, no floods appear to be occasioned by direct rainfall, and the distribution is particularly favorable for the growth of crops, being neither too great nor too small. The soil being of a clay nature will retain moisture during the seasons when there is a deficiency in precipitation. Besides this, the evaporation in the valley is not great. The temperature is also important, and it is to be regretted that reliable records do not cover a longer period. The following is the record of temperature for 1907 and 1908 at Bonners Ferry:

Mean monthly temperature at Bonners Ferry, Idaho.

	1907	1908
	°F.	°F.
January	.....	26.8
February	.....	28.0
March	.....	35.7
April	.....	46.3
May	55.0	50.8
June	57.0	58.0
July	64.8	67.6
August	59.8	65.9
September	54.9	57.2
October	50.6	44.8
November	37.4	33.2
December	29.4	27.0
		[1]45.4

[1] Mean for the year.

Maximum 1907, 95° July 31 and August 1.
Minimum 1908, 11° below zero January 31.
Maximum 1908, 98° July 31.

	1907	1908
Last killing frost in spring	May 1	May 19
First killing frost in fall	Sept. 23	Sept. 24

These records show that the seasons are cool and short, but are sufficiently long for the growth of grasses, small grains, and root crops.

We come now to the examination of the physical conditions of the land and the characteristics of the river, which should be considered in the problem of draining the valley. I take from Mr. Welle's report the following data, which have a direct bearing upon the problem under consideration.

	Acres.
Area of land between Bonners Ferry and international boundary (in Idaho)	40,000
Area from international boundary to Kootenai Lake (in British Columbia)	40,000
	80,000
	Miles.
Distance Bonners Ferry to Port Hill (international boundary):	
Straight line	22½
By river	45
Distance Port Hill to Kootenai Lake:	
Straight line	10
By river	25
Distance Bonners Ferry to Kootenai Lake by river	70
Kootenai Landing, south end of lake, to the outlet of lake	35
From outlet to Narrows	24
From the Narrows to Nelson, British Columbia	18
Distance from Bonners Ferry to Nelson	125½

The fall in this entire distance as ascertained by Mr. Welle, which, of course, is only approximate, is as follows:

	Distance.	
	Miles.	Feet.
Bonners Ferry to Port Hill	45	8
Port Hill to Kootenai Lake	25	4
Across Kootenai Lake	35	0
Through the "Narrows"	2½	1
From the "Narrows" to Nelson, British Columbia	18	0
Total	125½	13

The lake into which the river discharges is about 65 miles long. The outlet of the lake is about midway, and the "Narrows" through which the water is discharged is, according to Mr. Welle's measurement, 334 feet wide at low-water stage. From this point on to the city of Nelson the water is called the "West Arm" of the lake and is level. Two miles below Nelson the rapids begin and the stream is again known as the "Kootenai River." The entire lake and river are bordered by abrupt mountains, all the streams from which are precipitous. The rise of the lake above low water in 1894, the highest stage known, was 32 feet. With that exception the highest floods have been 24 feet, the usual flood height being about 10 feet.

It will be seen that the entire valley from Bonners Ferry to the town of Nelson, British Columbia, is an elongated lake, the narrowest part of which is the "Narrows," which connects the main lake with the West Arm. The fall for the entire distance to the rapids is but a little over 1 inch per mile, while the fall of the valley in Idaho is about 2 inches per mile.

Mr. Welle proposes a plan to prevent the flood plains of the lake from rising more than 10 feet above low water on the assumption that such control will reclaim the Idaho lands from injurious inundation. At the time of my inspection of the lake it was stated by the steamboat captain that the lake stood about 8 feet above low-water stage. All of the lowlands of the Idaho part of the valley were then swampy, though it is probable that the river was low enough to permit their drainage, if suitable ditches had been provided. Mr. Welle's plan is to enlarge the channel at the "Narrows" and at various points along the West Arm of the lake, including the channel at the first rapids, so as to increase its capacity sufficiently to prevent the water from rising in the lake above the 10-foot stage. I have examined the portions of the channel where it is proposed to do the work and find the conditions as he described them. There is no doubt that the work he proposes can be done. The question first to be considered, however, is whether the work, if done, will bring the expected result. I think not, for the following reasons: The effect of the contraction of the lake at the "Narrows" is to cause a congestion of the water and raise its level back of the obstruction until it has sufficient head to overcome the resistance. This will give rise to a greater velocity in order to compensate for the narrowness of the channel and is the cause of the great velocity of flow through the "Narrows" when the water in the lake is high. Should this channel be widened so as to remove the congestion, the water would be at the same height on both sides of the "Narrows" and the velocity would be that due to slope only, which is exceedingly slight and would not produce the velocity which has been figured. He computes the volume which must pass through the "Narrows" as an amount coming from the lake only, whereas on account of its level surface the entire valley, in addition to the lake is the body of water that must be taken into consideration in computing the flow through the "Narrows." There is another feature which must be taken into account. The entire valley is so nearly level and is so long that such lowering of the lake as could be done would not materially diminish the cost of adequately draining the lands of the valley, particularly in Idaho. The water which does the injury, with the exception of that which comes out of the river in low places along the banks, is that which comes from the hill slopes and streams and lodges in the lowland, particularly at the edge of the hills. Lowering the lake will not materially change this condition.

In my experience I find it exceedingly difficult to get a large number of landowners to cooperate in carrying out a drainage project, especially where the country is new and the commercial value of drainage untried. The general proposition may be readily agreed to by landowners, but the later adjustment of assessments for the cost of the work brings to light unlooked-for objections and legal complications, especially in carrying out projects for the reclamation of overflowed lands. I do not wish it understood that such work can not be done, but to call attention to the fact that projects of moderate size are much more easily and expeditiously handled. I can not see how you will derive any adequate benefit from doing work in British Columbia. The valley in Idaho lies higher than the one in British Columbia, so that the farmer will have a flood relief until the waters on the British Columbia side are concentrated and otherwise controlled.

I wish now to look at the matter from the viewpoint of the Idaho landowner. In my opinion these lands can be profitably improved at a moderate cost and without any great difficulty or delay in the following manner: I will assume that the river banks are not overflowed or that, if they are overflowed at points, strong levees can be put up to prevent it, except where tributary streams enter the river. Divide the area on each side of the river into sections of 2,000 to 5,000 acres, the size of these sections being determined by the proximity of the river to the bluff or by a tributary stream which brings water from the mountains. Cut off these tracts by cross levees extending from the bank of the river to the foot of the bluff. The lower end of each district should have a ditch or stream which will conduct the water from the hills and also from the lowlands of the district to the river. This ditch or stream should have a levee on the upper side. For draining the land construct a large ditch with a steam dredge at the foot of and parallel to the bluff, this being the lowest part of the land, using the excavated earth in making a strong levee on the river side of the ditch. This ditch should intercept all water from the hills and lead it to the lower end of the district outside of the levee to the river. A natural stream should be utilized for such a discharging point. Both ditch and levee can be constructed with a dredge at one operation. The ditch should be about 30 feet wide and 7 feet deep, and the levee probably about 8 feet high, with side slopes of 3 to 1. The base for the levee should be properly cleared and prepared for the deposit of the earth.

The land slopes from the river banks toward the bluffs. Ditches should be made where necessary for draining the land into the main ditch which skirts the bluff. These should have automatic sluice gates where they enter the main ditch, so that when the main is full water will not flow back into the land, but when the water is sufficiently low in the river they will discharge automatically.

I have represented this plan on a sketch taken from the map near the station of Copeland. The method proposed may be more briefly stated as follows:

1. Levee the low places in the river banks.
2. Cut off a tract of convenient size by running cross levees from the river to the bluffs.
3. Excavate a large ditch along the edge of the bluff with a strong levee on the river side and connect it with the river bank.
4. Make necessary ditches from the land into the main ditch, discharging them through automatic sluices.

I was under the impression that the land could not be well drained without using a pumping plant in addition to ditches and levees. Since I have examined the rainfall records I am of the opinion that by reason of the moderate precipitation and absence of heavy storms the land will take care of all rainfall if outside water is kept out. The river may, however, remain high a long time during some years and so seriously interfere with the discharge of the ditches that pumps may be required. With the above arrangement I think that the half of the inclosed district adjoining the river may be put in cultivated crops and the opposite half utilized for permanent meadow and pasture. I have referred to the use of the steam excavator for this work. Some form of the land dredge, with drag-line bucket, is admirably adapted to this work. I am inclosing a description and picture of a machine which I think is suited to construct both ditches and dikes at operation. Levees which are made with a machine are more solid and compact than those made in the old way, though not so shapely unless special care is taken in finishing. I think a machine could be obtained and work done on a district for about 12 cents per cubic yard for excavation, and the earth deposited in the form of a levee. I estimate the cost for a 3,000-acre district would be from $13 to $15 an acre.

Measurements and further examinations will be required to secure more accurate estimates, for the location and size of the district would vary the cost. Some districts could be worked out much more cheaply than others. I have indicated the manner in which I think the owners of land on the Idaho side should go at this problem. It is a good proposition. If the kind of farming should later require better drainage, a pumping plant could be installed at an additional expense of possibly about $2 or at the most of $3 an acre, without any material change in the system of ditches and levees above outlined.

Respectfully submitted.

C. G. ELLIOTT,
Chief of Drainage Investigations.

WASHINGTON, D. C., *November 21, 1910.*

Conservation.

EXTENSION OF REMARKS
OF
HON. CLAUDE WEAVER,
OF OKLAHOMA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, November 29, 1913.

Mr. WEAVER. Mr. Speaker, I rise to ask unanimous consent of the House of Representatives to place in the permanent RECORD of this Congress an instructive speech on the subject of "Conservation," delivered by my colleague, Hon. SCOTT FERRIS, of Oklahoma, on the 20th day of October, 1913, at Tulsa, Okla., before the International Dry-Farming Congress.

A speech on conservation was altogether fitting before that great international council which honored the State of Oklahoma by holding its deliberations in the beautiful, fast-growing, and magical city of Tulsa. The alpha and omega of dry farming is conservation. The basic principle is to prevent waste of water, and the whole science of dry farming is simply the conservation of water in the soil for use in agriculture.

The speech of Mr. FERRIS has a permanent value because it defines with precision the right principles of conservation and demonstrates the profound economic truth that conservation does not mean to lock up the illimitable natural resources of a nation and deny a rational and legitimate use of such resources to the people. There is a school of so-called conservators whose policy is like that of a farmer with a wheat field whitening to the harvest who conserves his wheat by leaving it ungathered, to be devoured by the fowls of the air or to rot in the field. The folly of such a policy is the lesson of the powerful discourse delivered at Tulsa by Hon. SCOTT FERRIS, and I am gratified, indeed, to have this opportunity, by the unanimous agreement of the Members of this House, to preserve that speech in the CONGRESSIONAL RECORD.

To-day I would gladly pay a tribute of friendship to the high character, the great ability, and the noble qualities of heart and mind possessed by my colleague, but how idle that would be, for I speak to those who know him well, who value his counsels, who love him because of his unfailing courtesy and rare social graces.

SCOTT FERRIS by unostentatious but useful service in this House has reflected honor on the State of Oklahoma where his name is a household word. The people of his own district, his immediate constituents, are bound to him by the strongest and closest ties of mutual confidence and personal attachment.

As chairman of the Committee on Public Lands of this House, in a position of great responsibility and power, SCOTT FERRIS stands as an impassable barricade between the public domain and the predatory interests that would despoil it. Unmoved on the one hand by the visionaries who would deprive the American people of the usufruct of an estate incalculable in value, which they hold in trust for themselves and their posterity, and on the other standing firm against the insidious influence of corporate monopoly that seeks control and ownership of public lands and public water power, SCOTT FERRIS is himself a fearless conservator not only of the Nation's wealth but also of the people's rights.

Let me conclude by saying with sincerity and truth that, in my opinion, he well deserves the tribute paid by Canning to the younger Pitt in those fine lines wherein he named him:

A statesman unbiased by interest or fear,
Ily power uncorrupted, untainted by gold.

Mr. Speaker, I now ask unanimous consent to print the speech referred to in the RECORD as a part of my remarks.

The SPEAKER. Is there objection? The Chair hears none, and it is so ordered.

The following is the speech of Mr. FERRIS:

"Mr. Chairman, delegates to the Dry-Farming Congress, ladies and gentlemen: The tariff, the trusts, the currency questions do not and can not rise to the importance of the work of this congress. The subject matter of this congress is of vital interest to every man that eats. We hear much of the high cost of living and its attendant ills. I say to you this congress has to do with a subject that will solve it, and the only method of solving it. Men and political parties prate about theoretical ways of dealing with bread-and-butter questions, but this congress deals with the real question, with the real subject matter, with the real production. In short, all other questions are dependent upon the question of production, and in fact there is nothing left for any of the tariff or currency tinkerers to do until we have first solved the question of production.

OF WHAT DO OUR NATURAL RESOURCES CONSIST?

"Our public-land areas embody principally that section of the country from British Columbia on the north to Old Mexico and its warring inhabitants on the south, from the placid Pacific on the west to the west edge of the Mississippi Valley on the east. This vast area, embodying the western section of our country, has within its borders 700,000,000 acres of public land, practically unoccupied, undeveloped, in its natural state. Comparison is always a forceful teacher, and it may be interesting to know that this wonderful region in area is three times greater than the entire German Empire.

"This enormous area consists of agricultural, mineral, and forest lands, all under the exclusive control of the national administration, far removed from the scene of action. Calling attention to this enormous area will, I think, give some idea of the magnitude of the propositions to be considered in the government and business management of this undeveloped empire. Again, the magnitude of area must of necessity sink into insignificance when we consider the vast mineral resources hidden beneath the surface, consisting of iron, coal, petroleum, asphaltum, phosphates, copper, zinc, gold, silver, cinnabar, and every species of precious metal known to our geologists. So little is known of this enormous wealth by the the average citizen that a word of explanation may, I think, be inviting.

COAL ENOUGH FOR 7,000 YEARS.

"The Geological Survey, constituted by Congress, maintained by Congress, a great and important arm of our Federal Government, headed by Dr. George Otis Smith, a brilliant, forceful man, through a special survey, under the auspices of the United States Geological Survey to determine our coal resources, in 1907 and 1908, shows an aggregate of coal deposits in the United States of 3,076,204,000,000 tons. I think it will be observed that the approximate annual output of coal aggregates 400,000,000 tons. It will be observed that by ordinary mathematical computation that we have enough coal located, determined, on hand, in the ground, with naught between it and the furnace save willing hands and labor to remove it, to supply this Nation for 7,000 years. To reduce the problem to a smaller area and reduce these startling and enormous figures to the comprehension of all of us, I call to your attention the fact that the one arid State of Wyoming has a coal deposit aggregating 424,085,000,000 tons—enough to supply this sisterhood of States for a thousand years.

"We read in the magazines, we hear campaign orators on the stump assert that this Nation has exhausted its resources and frittered them away, but it is not so. If they were to be believed, our Nation would have little to invite those from the

other countries to come and share with us the bountiful resources of the richest, happiest, and most progressive Republic in all the world. I can not sit silent and allow the uninformed to blast and wither the beckoning hand of opportunity for those with brain and brawn who would come and help develop our resources, which as yet have scarcely been scratched.

ENORMOUS AREAS OF TIMBER.

"It has been earnestly asserted that the Republic is almost without timber, but that is not a true statement of conditions. The official reports of the Federal Government develop the fact that we have 600,000,000 acres of timberland in this country. Germany has but 35,000,000 acres. The forest growth of the German Empire is estimated by that Government at 636 feet board measure per acre annually. If we estimate our forest growth at 300 feet board measure per acre annually, which is less than half of the estimated growth of the German Empire, our increase in forest growth annually will amount to 180,000,000,000 feet. Statistics carefully compiled tell us that we use as a nation 50,000,000,000 feet per annum; this increase alone is approximately three times the amount we consume annually as a nation. Now, allowing for losses by forest fires, decay, wind destruction and waste, our forests are now producing by natural growth more than twice as much timber as a nation than she herself consumes. It is true some portions of the country by fires and denudation have been stripped of their forest growth. But I think in the face of the above figures, which are reliable, that this can hardly be startling and of more than local import. I am not one of those who believe it right to either think or speak lightly of forest waste or inattention, but I am one of those who believe in using our forests and the molding of their products into a multitude of forms and let nature reassert herself and grow new forests more beautiful than the first.

OIL ENOUGH TO LAST 50 CENTURIES.

"The best estimates at hand disclose the fact that this vast empire has well-defined oil areas already prospected, tested, and exploited that show enough oil to supply the world's needs for fuel, illumination, and lubrication for at least 5,000 years. Recent developments in fair Oklahoma alone but indicate the boundless scope of this one natural resource. Its development by the sturdy explorer has converted cow camps into cities, cow trails into highways, poor men into rich men, and hove's into homes. It is and has been a beacon light pointing the pathway of hope, obliterating skepticism and doubt.

"It has caused Oklahoma to be a field of opportunity for every young man with brains in his head and brawn in his arm from every State in the sisterhood. It has given us a greater population than Arkansas, a population equivalent to that of Kansas, a State of happy homes and prosperous people; in fact, oil is king. Oil has given us light instead of darkness, warmth instead of chill, automobiles instead of oxcarts; oil has given us Tulsa, and Tulsa has given us all things.

IRON ORE ENOUGH TO LAST A THOUSAND YEARS.

"It has been asserted, more or less seriously, that our iron ore was fast vanishing and that those now here would live to see a famine in iron ore and the attendant consequences, but, gentlemen of this Congress, this assertion is not borne out by the facts. The investigations of our own United States Geological Survey, made in 1908, disclose the fact that the known iron-ore deposits of the United States amount to 62,840,000,000 tons, or enough to supply our country at the present rate of consumption for more than a thousand years. Again, it will be observed that iron ore once used may be used again. For example, iron may be smelted and resmelted again and molded into a multitude of forms of usefulness and value. It will be observed that as time progresses and scientific methods improve and as industrial operations multiply old machinery, old rails, iron beams, outworn rolling stock, and every kind of iron manufactured will be returned to the furnaces after it has lost its usefulness in its present form; hence an ever-increasing supply by this reutilization of iron will extend the supply something like 2,000 years, or 20 centuries.

INEXHAUSTIBLE SUPPLY OF PHOSPHATE ROCK.

"Again, it has been asserted in public utterance and through the press that our phosphate rock, which is used to fertilize and replenish impoverished soil, was fast becoming extinct and would soon vanish altogether. These alarming assertions are not corroborated by the investigation of the Geological Survey, which makes investigations without interest, without hysteria, without commotion, but in a calm, deliberate, and painstaking way. As a result of an investigation had by the Geological Survey immediately prior to the years 1908 and 1909 it was the judgment of that bureau that there were between ten and twenty billion tons in the area examined of first-class phosphate rock suitable for fertilizer. It will be interesting to know that the entire amount of this product used in the United States in a single year aggregates but approximately 1,500,000 tons. It will be observed that I am not taking into account the immense phosphate beds of Florida, South Carolina, and Tennessee. The best evidence seems to disclose that these beds alone would supply our country for 50 centuries.

"I do not now—I have not in my seven years' service on the Public Lands Committee felt that the value of this wonderful product could ever be overestimated. It puts life in the soil that has become depleted; it doubles the production of the virgin soil; it makes fertile land out of sterile land, rich soil out of poor soil, productive soil out of hardpan; and has its myriad forms of usefulness, the half of which has never yet been told. It is not the subject of waste, but it is the subject of monopolization. Neither moth, rust, forest fires, nor decay can reach this princely product, but the hand of monopoly can and will, if without restraint, secure, corner, and monopolize it if wise and beneficent land and mineral laws are not enacted to prevent it.

"I hope this congress, in conjunction with its other timely tasks, will aid the Congress of the United States and the Committee on Public Lands, of which I have the honor to be chairman, with their best suggestions as to how to develop these phosphate beds and ward off the cruel grasp of greed and monopoly. I am not one of those who would lock up our Nation's storehouses and deny the people who have made this Republic what it is access to them; but, on the other hand, I should oppose with such earnestness as I have at my command, first as a citizen, second as a Congressman, third as the chairman of that great committee which has to deal with these matters, every approaching step of monopoly—monopoly which ever stands ready to pick the threadbare pockets of the American farmer. It is my one hope that this congress in its wisdom may advocate strennously the policy of use but forever fight and oppose the policy of monopoly, greed, and abuse. Use begets progress, progress begets industry, industry begets hope; these elements combined have in the past made this Republic possible and will in the future mark its advancement and make it the leader among the nations of the earth.

SWEEPING WITHDRAWALS NOT FOLLOWED BY INTELLIGENT ADMINISTRATION DISASTROUS TO TRUE CONSERVATION.

"For example, on December 31, 1912, there were withdrawn from entry in the several States the following areas of land:

	Acres.
Coal withdrawals	65,909,712
Oil withdrawals	4,677,902
Phosphate withdrawals	3,291,527
Water-power withdrawals	1,843,475
Reservoir withdrawals	101,758
Public-water withdrawals	86,122
Precious-metal withdrawals	9,787
Total	75,919,083

"It will, I think, be readily observed that such sweeping withdrawals unless accompanied by painstaking classification become a great detriment to the State from a taxation standpoint, and retard development and progress from both a State and National standpoint; for example, Alaska has been so shamefully handled and administered upon that the Territory has become a political football, and Alaska has suffered intensely as a result thereof. Congress is even now debating seriously the advisability of the $35,000,000 Government bond issue to construct a railroad and operate the Alaskan coal mines under governmental supervision.

CONGRESS HAS GRANTED SOME RELIEF, BUT MANY STEPS YET NECESSARY.

"In the last Congress a bill was passed creating a commission to modify, codify, and revise the present land laws of the United States so that they would be applicable to the conditions of the present day.

"The passage of this bill was most opportune, and, I believe, from it will come some modifications that will be helpful to settlers, to miners, and to the Government which is to administer the trust.

THE THREE-YEAR HOMESTEAD LAW.

"It will be remembered that the humid areas of the Eastern States were settled under the five-year homestead law. The last Congress observed the necessity and put into execution a three-year homestead bill which is a boon and a blessing to the settler, an aid to the Government, and a just piece of legislation designed to advance the West.

RIGHT OF APPEAL TO THE COURTS.

"The changing conditions of the times, the rapid changes in the personnel in the departments, the sweeping changes in public sentiment with reference to our public affairs all make it exceedingly necessary that every miner and every settler have the right of appeal to a court where under the Constitution and our laws he can have his day in court. Once granted this day in court, he will not have to have his rights as a miner, as a homesteader, frittered away, sacrificed and lost by reason of his failure to prophesy what the latest whim of the department may be. I have long thought this a burning necessity; I have long thought it would be a wholesome matter for all concerned. It would be a forum where the homesteader would be secure in all he is entitled to; no more and no less. He would be free from the whims and caprice of bureau heads, who either do not know or can not understand the intention of Congress plainly expressed.

WITH ALL THESE RESOURCES NO ADEQUATE PUBLIC-LAND POLICY IS IN VOGUE.

"With all this enormous wealth decreed to us by nature and by purchase, with all the mineral deposits slumbering in the ground untouched, yet the United States, with all its patriotism, with all its wisdom, has as yet no well-defined, well-digested, rational policy for the occupation and development of the surface or the mining and removal of the wealth beneath it.

"Our land laws are in many respects crude, irreconcilable, inefficient, without uniformity, confusing to the brain of the settler, impossible of interpretation by the layman—a jargon of inconsistencies retarding progress and development. Most of our so-called land laws, in truth and in fact, are not land laws at all, but are simply a jargon of Executive orders, rulings, interpretations, and decisions made by different bureau chiefs and clerks in the ramifications of the various bureaus of the Interior Department. For example, within my short service in Congress we have had four different Secretaries of the Interior. They served in the order as follows: Garfield, Ballinger, Fisher, and Lane. The views of these four men who answered to this high calling have differed in policy, on questions of law, on questions of construction, while the poor confused homesteaders and miners suffered from the ever-changing and conflicting views of those who ruled over them to an extent almost greater than they could bear. Many of these decisions are not only independent of each other but are contrary to the law as well. They are actually obstructive to the settlement of the lands of the West and a blight on the development of the unbounded resources of a Nation that is richer than we know. These opinions are changed, reversed, and amended from day to day as the new Secretaries and new bureau heads come onto the field of action, so that the status of land settlements and industrial enterprises in the West is constantly imperiled, impeded, and full of heart aches for America's home builders. On the question of the management of our public lands and the minerals that slumber beneath them the last two national administrations have been wandering in a maze of conjecture, which is blighting to both East and West. For the last dozen years the solution of these western problems and the handling of the Nation's storehouses has been one that has engaged the minds of our best men of all political creeds and faiths.

"So far as I have been able to observe, and my observations have been more than casual, having been a member of the Public Lands Committee during four Congresses of two years each, the Government has accomplished but one thing, and that is to withdraw from every sort of entry the major portion of our public lands of the West that are valuable for any purpose. This plan has one good element, and that is it gives us time to think and study out a policy, but I desire with such earnestness as I have at my command to call to your attention the fact that the mere withdrawal of land does not in any sense solve the mineral and public land problem. It merely magnifies the necessity for the solution of the problem. It is therefore, in my judgment, the duty of not only this congress, but likewise of the Congress of the United States, to see to it that these lands withdrawn are quickly but efficiently classified and put to their proper use, whatever that may be. In other words, if great areas of land have been withdrawn for forest purposes when tree growth is unnatural and impossible in that particular zone or elevation, certainly so flimsy a veil should be removed and the land placed to its proper and dignified use. On the other hand, if large areas of land have been withdrawn for mineral purposes and there is no mineral present, surely the land should be restored, so that home builders may cultivate them and they shall serve their proper function allotted them by nature. Again, if coal lands, mineral lands, and other lands known to be chiefly valuable for mineral, precious or otherwise, are now subject to entry and acquirement, it is the patent duty not alone of this congress but of the Congress of the United States to prevent monopoly, to prevent extortion, and proceed to have this mineral extracted, not for the benefit of the few but for all the people.

"Again, if there now be lands covered with valuable timber, chiefly valuable therefor, subject to homestead entry and acquirement under the provisions of the homestead law, surely it is the duty of the Congress of the United States to enact legislation and use every arm of the new and progressive administration to prevent such abuses and misappropriations. I am in full harmony with that provision of the national Democratic platform which asserts:

"We believe in the conservation and the development, for the use of all the people, of the natural resources of the country—

"And, further, I agree with the platform wherein it asserts—

"Such additional legislation as may be necessary to prevent their being wasted or absorbed by special or privileged interests should be rigidly adhered to.

"I was a delegate in the national convention that formulated that platform, and I am proud that the party of which I am an humible member and the new administration have taken their stand on the side of use rather than one of nonuse and abuse. Again, I am in full harmony with the platform molded at Baltimore, to which the new administration is so faithfully adhering, when it said:

"The public domain should be administered and disposed of with due regard to the general welfare. Reservation should be limited to the purpose which they purport to serve and not extended to include land wholly unsuited therefor. The unnecessary withdrawal from sale and settlement of the enormous tracts of public land upon which tree growth never existed and can not be promoted tends only to retard development, create discontent, and bring reproach upon the policy of true and effective conservation.

"There are times in the lives of men and political parties when we must protect ourselves against our friends. Real conservation and real conservationists of our natural resources are our friends, and this is one of the great questions of the day and time, but the elasticity and false construction of the term seem unfathomable and at times seem unconquerable. For example, those conservationists who believe in fighting the hand of greed, the hand of monopoly, the hand of extortion and irregular dealing when reaching into the Nation's storehouse are the school of wise conservation to which I think we will all finally belong. The conservationists who believe in a policy of nonuse, a policy of bitter opposition to everything progressive, stubbornly opposing well-regulated use and development of our boundless resources are, in my judgment, a school of perhaps patriotic thought, but without real first-hand information as to the true conditions that prevail. This school of thought must of necessity sooner or later give way, be supplanted, and retire in favor of those who put to the highest and earliest use every resource of the Republic. With this later school of thought I shall take my stand. To this step toward the highest development, the greatest progress and the highest use, I shall bend every energy as a citizen and as a Representative.

PRODUCTION OF GOLD AND SILVER A REVELATION TO THE WORLD.

"In 1896 and in the years that preceded and followed that time the question of the scarcity of money wrought this Nation up politically as it was never done before. Men of all parties, creeds, and faiths became animated, excited, and in turmoil over this one great question. What has solved this question? What has quieted the public pulse?

"The answer need not come from me, but it comes from a thousand voices on every hand and from all political parties. It is the output of gold, the output of silver, that has solved this problem, which otherwise would not down. The output of gold in Alaska and the western part of this Republic has increased to an extent that has alarmed our financiers, has changed the standard of value the world over, has crucified 'sixteen to one' on a cross of gold, and has divested prophecy of its already too flimsy footing. The output of silver has made it a drug on the market so that only the richest mines can be worked with profit at all. This wonderful output of precious metals has raised the salary of the farm laborer from $12 a month to $30, has increased the price of day labor from $1 a day to $3 a day, has increased the price of beef cattle from 2 to 8 cents per pound, the price of hogs from 3 to 10 cents, the price of soup bones from 5 to 15 cents, the price of beefsteak from 10 to 30 cents, of bacon from 12 to 40 cents, and the half has never yet been told. Where is that man who says this sisterhood of States is not rich in all that the bountiful God of creation could bestow upon us? Where is that man who could grow careworn and gray over fanciful poverty that does not exist? Who is there here that would hide under the bushel the hope of reward in man in this great western section of our Republic? Much would I prefer to say by wise and beneficent land laws in substance that a home awaits you on the boundless prairies of the West where by irrigation and dry-farming methods you can have for your very own that one green spot called 'home.' Much would I prefer to say there need not be 500,000 patriotic Americans traveling to Canada in quest of homes and employment, but that you shall have employment here under the Stars and Stripes in a Republic where every man is equal

before the law, where the door of opportunity and hope shall ever stand ajar to both rich and poor, and where every man is a sovereign and no man wears a crown.

"Our beloved Speaker, CHAMP CLARK, who left the Speaker's desk to speak on the three-year homestead bill that became a law during the last Congress, on March 20, 1912, on the floor of the American House of Representatives said:

"Benton's theory was that the possession of homes by bona fide settlers ought to be made as easy as possible, and I believe this with all my heart. To me the most painful feature of the day in which we live is to see a constantly increasing stream of the very best American citizens going to Manitoba and Alberta. One day in my county, one of the richest, largest, and most influential counties under the sun, 43 farmers loaded up an entire freight train, every one riding in a Pullman car, chartered the train, and pulled out for Alberta. I am in favor of fixing it so that no American citizen will want to depart from the United States to secure a home in a foreign land.

"Who is there that does not agree with Speaker CLARK in this? His great warm heart aches when his people's heart aches. His hope increases while their hope increases. Who is there among us that would not like to keep within our own country every true American? Who is there about us that would not like to have it said that so long as homes abound, so long shall homes be found? For me and mine I take my stand with the frontiersmen who are willing to leave behind them men and women of more tender sensibilities and make this new country what it is and what we all hope it will be. For me and mine, as a citizen, as a Congressman, as chairman of the great Committee on Public Lands, mine shall be a policy of use but not abuse, mine one of industry not of idleness, mine one of homes not of bald prairies, mine one of mines and industry and not one of idleness and decay. Who is there about us or among us that does not believe that the $4,000,000,000 worth of precious metals quarried from the barren and bleak hills of the Rockies has not aided in the upbuilding of this Republic? Who is there about us that would cast a single blight or a single sigh at the hope and success of the Forty-niners who journeyed across the Rockies behind ox teams, enduring great danger and deprivation to bring to us the precious metals and the wealth of the generations that have preceded us? Who is there here who would, if they could, strangle the hope of man in this onward march of progress and development? The increase of basic money in the past, to-day, and in the future will determine the prosperity of the Nation.

WHERE DID WE DERIVE THIS VAST ESTATE?

"The area of land comprising the great bulk of our public-land holdings was derived in the following manner: The Louisiana Purchase, which, to my mind, was the greatest of all of them, cost the United States but $15,000,000; the Florida purchase, $5,000,000; the Mexican acquisition, $15,000,000; the Gadsden purchase, $10,000,000; and the Alaskan Territory purchase, which is the most recent one, $7,200,000. The entire amount totaled in area consists of 1,849,720,587 acres of land. The total cost, including the interest paid, is $88,157,389.08, or an average of 4.7 cents an acre for this entire area. Who is there among us who would say that the land laws should be made so harsh either by Congress or their interpretation of them that the American settler and home seeker might not find there a place he could call his home? This Rocky Mountain western region was the least inviting to the sturdy pioneer who was willing to leave his home and his loved ones behind to seek a new home in new and untried fields. It was Daniel Webster who, in debate while the western territory, which we acquired from Mexico, was in process of acquirement, said:

"What do we want of that vast and worthless area, that region of savages and wild beasts, of deserts, of shifting sands and whirling wind, of dust, of cactus and prairie dogs? To what use could we ever hope to put those great deserts and those endless mountain ranges, impenetrable and covered to their very base with eternal snow? What can we ever do with the western coast, a coast of 3,000 miles, rock-bound, cheerless, and uninviting?

"Who, I ask, has blazed the way and broken down the views and prejudices held by Webster and those that agreed with him about those conditions? Has it been that boy who preferred to patiently wait until his father had bequeathed him a child's part of the parental roof and the parental farm, or shall we give credit to that boy imbued with courage, dauntless, courageous, charged with a thousand volts of hope and ambition, who said to those behind, 'Take the old homestead. I'll seek a new home in the West, so your portion may not be a small one.'

"Much would I prefer to take my stand with him who said: 'Westward the course of empire takes it way.' Much would I prefer to take my stand with that pioneer with his covered wagon, who has converted the land of savages, wild beasts, and prairie dogs, as described by Webster, into happy, prosperous, contented cities, villages, and homes. After the settler and frontiersman have contended with the droughts, the hot winds, the grasshoppers, and the uncertainties of agricultural production in an earnest endeavor to secure a home for himself, I shall not be one of those who would make his efforts to secure a home for himself and his loved ones more difficult of acquirement.

THE WEST STILL AN UNDEVELOPED EMPIRE.

"The most splendid civilization of remote antiquity was established in desert lands. The remains of ancient cities in Egypt, Persia, and Arabia, in the valleys of the Euphrates and the Nile, reveal but partially the wealth, the grandeur, and the possibilities of our semiarid West under irrigation, dry farming, and improved methods. We surpass them in fertility, in area, in minerals, and in surface possibilities. What marvelous things we find in this land of the desert, a region of which the mass of intelligent people of this Nation have little, if any, conception! The Congress of the United States itself knows not of its possibilities. The development of this virgin empire stands matchless, beckoning homebuilders come, and pleading for wise laws which will induce them to come. In the West are homes for the homeless, hope for those without hope. Truly it is a garden of opportunity.

WE STILL NEED THE MINER, THE SETTLER, AND THE PIONEER.

"Some of the laws of Congress and many of the rulings of the department seem to be made on the theory that we do not longer need the sturdy pioneer. To this no thoughtful man acquainted with the conditions in the West will ultimately subscribe.

"Such a theory is wrong in principle, rests on no firm foundation, is illogical, and is not clothed with that sound judgment that must attend every successful enterprise.

"We have for the last hundred years, we do to-day, and will continue, in my judgment, for many generations in the future to need the industrious, competent, honest, resourceful, and courageous settlers who open up our mines and our quarries, irrigate our fields, demonstrate dry farming, and who have the hardihood and the sturdiness to withstand the hardships incident to a section of the country which as yet slumbers almost as nature left it. To say that we can dispense with these soldiers of fortune is to say that the West will return to that state described by Webster, 'A country of savages, wild beasts, prairie dogs, and barren plains.'

"In my judgment the United States should long hesitate to follow theories that greatly interfere with the honest settler seeking a home and the honest miner seeking fortune to enrich the world. We should not inflict Federalism and long-range government upon them until we blight the hope of individual ambition and endeavor. We should fight monopoly and graft and greed at every turn of the road, but we should not pursue a nagging and gnawing process with the settler or the miner who is seeking to develop the country in an honest and patriotic way.

THE PIONEERS EMPIRE BUILDERS.

"The sturdy pioneer of the West is entitled to patient, painstaking, and generous treatment at the hands of our Federal Government. The men who are wrestling with the drought, the semiarid conditions, the wild and unsubdued sod, and all the hardships and vicissitudes of the great mountain ranges and desert plains of the West, who by irrigation, dry-farming methods, and mining are converting the West into a garden of prosperity, who are ranging their flocks and their herds upon a thousand hills, who are chiseling from the unquarried rocks their boundless treasure, are our brothers in manhood, are our equals in intellect, patriotism, and integrity; yea, they are our superiors in courage. Why should they not be accorded every consideration that was accorded the early pioneers of our earlier settled States? What they have already accomplished in the face of adversity is the marvel of the century and beyond the hope of us all. With proper consideration at the hands of this Government, with careful and well-digested laws to govern this unbounded estate, with wise administration in the Interior Department their accomplishments have but just begun.

"The new administration just budding into power promises by their platform to restore the Government of the fathers and give the settler and the home owner a new lease on life. The platform asserts that 'the public-land laws should be administered in a spirit of the broadest liberality toward the settler.' I submit no more patriotic task could be launched by the new administration than to inspire new hope in America's home builders and inspire those now without a home to seek one under our flag, under our country, so long as homes abound. Let us hope that this congress convened at Tulsa, whose purpose is for the good and development of all, will put its sturdy shoulder to the wheel and urge the American Congress to give the American home builder and the American settler good laws, good administration, kind treatment, and good homes."

The Late Representative George S. Legare.

MEMORIAL ADDRESS
OF
HON. JOSEPH T. JOHNSON,
OF SOUTH CAROLINA,
IN THE HOUSE OF REPRESENTATIVES,

Sunday, February 23, 1913.

The House had under consideration House resolution 867, paying tribute to the memory of Hon. GEORGE S. LEGARE, late a Member of the House from the State of South Carolina.

Mr. JOHNSON of South Carolina. Mr. Speaker, in presenting the resolutions which have just been read at the Clerk's desk, and moving their adoption, I take but little time of the House. I wish to call attention to the fact that this day we have paid tribute to seven deceased Members of Congress. Probably we have never in the history of the Government been called upon to mourn so many of our fellows as we have in the present Congress.

I have not prepared any speech for this occasion, because my duties in connection with the Committee on Appropriations have been so arduous and exacting that it was impossible for me to give such time to such preparation as I would like. I see around me many of the colleagues of GEORGE LEGARE who have had the opportunity and have prepared beautiful orations for this occasion. I am not given to the use of flowery language nor to flattery, but I wish to say in plain, simple, unadorned English that GEORGE LEGARE was the most loving and lovable man that I have ever known—he made more friends, and warmer and faster friends, than any man of our delegation, or indeed than any other Member that I have known in my service here. His manners were pleasing; he could adapt himself easily to his surroundings; but anywhere and everywhere and always he was a perfect gentleman. He came from a long line of Huguenot origin; he manifested the culture and the refinement and the mentality of a hundred years in training and education; his mind was quick and penetrating; his judgment clear. Though frail of body, he was industrious, far more industrious than he ought to have been, to the very end. We can not understand why a young man of such mentality, refinement, culture, and usefulness should be cut down in what appeared to be the beginning of a great career, but faith tells us that it is right and all is well. The congressional party who attended the funeral at Charleston saw in that quaint, beautiful old city on every side and in every face evidence of the deep esteem and the affection that the people had for GEORGE LEGARE. It was manifest that as he had made friends with all men with whom he came in contact in Washington he had also made friends of all the people amongst whom he lived and with whom he came in contact in his own city.

In the presence of the largest crowd that I have ever seen at a funeral the friends of GEORGE LEGARE, with loving hands and bleeding hearts, laid him to rest in the beautiful Magnolia Cemetery in the beautiful city by the sea.
